	Females.....	547		Females.....	681		Females.....	675
	Total.....	1107		Total.....	1364		Total.....	1376

NOTE.—It will be observed that the classification of the Abstract is now slightly modified in conformity with the second edition of the nosology. The extension of the list is chiefly due to the improvements in the character of the returns; now made in 93 cases out of 100 by the medical attendants of the deceased, and by the Coroners.

+ Premature birth has hitherto been returned under the head "Debility."

* In the East district of Islington, a woman is reported to have died of "carbuncle and debility," at the advanced age of 102 years.

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive and tension very strong at each examination.	The sky was generally about one-half covered with cirrostratus, scud and haze throughout the day.
MON.	Positive and tension strong till 9h. a.m. Weak during the remainder of the day.	Generally overcast throughout the day.
TUES.	Positive and tension generally strong from 8h. a.m.	During the night the sky was mostly covered with cloud. It was cloudless from 9h. a.m. to 8h. p.m.
WED.	Positive and tension very variable throughout the day. At 3h. p.m. nothing was shewn.	Generally overcast, except during the evening, when most of the sky was free from cloud. A thick misty rain was falling from 10h. a.m. till noon.
THURS.	Positive and tension moderate at 6h. a.m. Nothing was shewn at any other times.	Cloudless from 8h. a.m. till 9h. p.m. At other times it was mostly overcast.
FRID.	Positive and tension weak at 9h. a.m., and from 3h. to 6h. p.m. At other time nothing was shewn.	During the early part of the morning it was cloudless. Overcast during the remainder of the day. Rain was falling from 11h. a.m. till 7h. p.m.
SAT.	Positive and tension generally strong from 8h. a.m. till midnight.	Overcast throughout the day. At about 3h. p.m. rain and fine hail were falling, and continued till about 4h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. A.M. to 6h. P.M. and at midnight. The means of the values observed at these times, are converted into mean daily values, by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively, that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. A.M., was 39°.1; and the mean reading at 7h. 30m. P.M., was 39°.8; the mean readings at the Royal Observatory at 6h. A.M. and 6h. P.M. were 38°.8 and 37°.3. respectively.

† The general direction of the wind for the week is S.

Births and Deaths registered in London

During the Week ending Saturday, January 15th, 1848.

NOTE.—It will be observed that the classification of the abstract is now slightly modified in conformity with the second edition of "The Nosology." The extension of the list is chiefly due to the improvements in the character of the returns, which are now made in 93 cases out of 100 by the medical attendants of the deceased, and by the coroners.

* The ages of two persons, whose deaths are ascribed to *disease of the heart*, and *gastritis*, are not stated.

† Premature birth has hitherto been returned under the head "Debility."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 1.

(The tabular abstract on the first page is for the week ending Saturday, Jan. 15th. The following selection of cases is made from the Returns for the week ending Jan. 8th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Hanging and Suffocation:—
M. 57 { fractured rib.....	*	Barnau, 24, suicide by shooting himself with a pistol in a temporary state of mental derangement.....	instant	M. 5 weeks, found dead—apparently died from suffocation.
(no inq.) { pleurisy—peritonitis.....	11 days			
Spinster, 22, fell from a window.....	2½ hours			
insane—had previously taken laudanum.				
F. 75, natural, had asthma after a fracture of the thigh, producing great general debility	*			
M. 72, { contused and lacerated wounds of	13 days	Drowning:—		
(no inq.) { scalp, from accident.....	13 days	M. 37, suicide, drowned himself while in an unsound state of mind.		
{ erysipelas.....	10 days	Bricklayer's labourer, 61, accidentally drowned by the upsetting of a boat.		
exhaustion.		M. 12, found drowned in the river Thames at Woolwich.		
M. 22, found dead in a cellar with a mortal fracture on his head, caused by a fall from a building above.....	*	M. 18, accidentally drowned in the River Thames at Woolwich (under water 12 hours),		
M. 61 (no inquest), concussion—dementia....	3 years	Seaman, 36, accidentally drowned from falling overboard from a boat in the River Thames at Woolwich (6 hours under water).		
M. 4, concussion of the brain, from a fall whilst at play.....	3 days	Seaman, 54, drowned in the River Thames, by falling overboard in a state of intoxication, from the "General Palmer" transport ship, off Woolwich.		
F. 71 (no inquest), debility, arising from fracture of the neck of the thigh bone.....	*			
In Charing Cross Hospital (post mort.), daughter of a labourer, 4, inflammation of the lungs, from fractured ribs penetrating lungs; knocked down and run over in King William-street by a hackney cabriolet.....	7 days			
				Burns and Scalds:—
				F. 2, wounds by burns accidentally caused ..
				Daughter of a smith, 2, accidental death from clothes taking fire.....
				Son of a bricklayer, 2, injuries accidentally received from being burnt.....
				Daughter of a bricklayer, 4, burnt by her clothing accidentally taking fire—fell against a fire.....
				Son of a labourer, 2, accidental scalds by a kettle of water falling off a fire on to his person, he having fallen under the grate..
				Poison:—
				Tohacoonist, 30, suicide by essential oil of bitter almonds.....
				Surgeon, 45, suicide by hydrocyanic acid
				state of mind unknown.
				Charwoman, 44, oxalic acid taken into the stomach, suicide.

DEATHS BY SMALL POX, INFLUENZA, PURPURA, SYPHILIS, HÆMORRHAGE, HERNIA, NEPHRIA (OR BRIGHT'S DISEASE), DIABETES, STONE, CHILDBIRTH AND METRIA (OR PURPERAL FEVER), INTemperance, DELIRIUM TREMENS, CIRRHOSIS, PRIVATION AND NEGLECT, WANT OF BREASTMILK, MALFORMATION, ETC.

<i>Small Pox:—</i>	<i>duration</i>	<i>Small Pox (continued):—</i>	<i>duration</i>	<i>Small Pox (continued):—</i>	<i>duration</i>
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		M. 37, small pox—confuent	9 days	F. 10 mon, small pox	*
M. '36, small pox	12 days	F. 3 mon, { bronchitis	3 weeks	not vaccinated.	
F. 14, confluent small pox—natural	*	F. 3, { variola—confuent	9 days	M. 3, small pox	14 days
petechiae 10 days after eruption (not vac.)		F. 3, confluent small pox	14 days	M. 2, small pox	*
M. 1, small pox	9 days	not vaccinated.		vacinated.	
In Small Pox Hospital, M. 26, small pox—		M. 1, small pox—natural	8 days	M. 3, small pox	*
confluent—unprotected	6 days	vacinated 11 months ago without effect.		not vaccinated.	
In Small Pox Hospital, F. 14, small pox—con-		M. 3, variola	7 days	F. 10 mo., small pox	*
fluent—unprotected.		not vaccinated.		without previous vaccination.	
M. 34, variola conflens	27 days	F. 1, { small pox	8 weeks	F. 1, variola—conflens	2 weeks
F. 6, small pox, confluent	9 days	{ pneumonia	8 days	not vaccinated.	
first attack, not vaccinated.		not vaccinated.		M. 21 { small pox	6 weeks
F. 15, small pox, confluent, typhoid	16 days	M. 6, small pox	10 days	(p.m.) { intestinal fever	16 days
not vaccinated.		vacinated.		ulceration of intestines.	
M. 1, small pox	9 days	F. 8 weeks, small pox	*	F. 16 mo., { chicken pox	14 days
not vaccinated.		not vaccinated.		{ pneumonia	2 days
F. 11 mon, small pox	10 days	F. 17 mon., small pox	9 days	M. 6, small pox	*
vacinated without effect.		vacination attempted 12 months ago.		not vaccinated.	
		M. 3, small pox	9 days		
		not vaccinated.			

Influenza:—

PADDINGTON; St. John.	duration
F. 36, { disease of the chest	*
{ influenza	*
KENSINGTON; St. Paul's, Hammersmith.	
M. 6 weeks, { epidemic catarrh	4 days
{ pneumonia	1 day
F. 69, influenza	10 days
Kensington Town.	
F. 70, influenza	26 days
debility with aphthous ulceration of mouth and fauces.	
Brompton	
F. 38, influenza	3 weeks
CHelsea; South.	
F. 72, decay—influenza	3 days
F. 1, { influenza	14 days
{ rubecula	*
North-west.	
F. 33, { influenza	2 weeks
{ bronchitis	3 days
F. 63, influenza	14 days
ST. GEORGE, HANOVER SQUARE; Hanover Square.	
F. 3, influenza	*
F. 67, influenza	*
WESTMINSTER; St. John.	
M. 2, influenza—bronchitis	5 days
St. Margaret.	
M. 7, { enlarged heart	*
(p.m.) { anasarca following influenza	*
{ influenza	7 days
F. under 1 year, { dentition—bronchitis	18 hours
ST. MARTIN-IN-THE-FIELDS; Charing Cross.	
M. 3, { influenza	33 days
{ hydrocephalus	2 weeks
ST. JAMES', WESTMINSTER; Golden Square.	
M. 54, { influenza	*
{ pneumonia	*
ST. MARYLEBONE; Cavendish Square.	
M. 38, { influenza	28 days
{ pneumonia	23 days
The Rectory.	
F. 80, influenza	*
F. 5 months, influenza	10 days
St. Mary.	
F. 63, asthma—influenza	*
Christ Church.	
F. 63, influenza	3 weeks
ST. PANCRAS; Tottenham.	
F. 11 months, { influenza	35 days
{ exhaustion	*
Gray's Inn Lane.	
M. 54, { asthma	— months
{ influenza	6 weeks
The Regent's Park.	
M. 40, influenza	6 weeks
M. 10 months, influenza	*
F. 33, { phthisis—pneumonia	3 months
{ influenza	6 weeks
{ acute bronchitis	4 weeks
Kentish Town.	
M. 2, influenza—typhoid—hepatization of lung—disease of brain.	1 month
ISLINGTON; West.	
F. 3 months, influenza—diarrhoea	1 month
East.	
M. 5, { phthisis—pneumonia	*
{ influenza	2 months
F. 86, influenza	*
HACKNEY; Hackney.	
F. 57, { phthisis	3 years
{ bronchitis—influenza	10 weeks
Stoke Newington.	
F. 11 months, { influenza	3 days
{ pneumonia	*
ST. GILES IN THE FIELDS; South.	
M. 59, influenza	*
M. 6 months, influenza	14 days
M. 4, { influenza	1 month
{ pneumonia	1 month
North.	
F. 46, influenza	*
STRAND; St. Clement Dances.	
M. 59, influenza	1 month
St. Mary.	
M. 8 months, influenza	1 week
F. 13 months, influenza	14 days
St. Anne, Westminster.	
M. 17 months, influenza	4 days
HOLBORN; St. Andrew (East).	
M. 29, { influenza—rheumatism	*
{ hemorrhage from bowels	*
Saffron Hill.	
M. 6, influenza	7 days
M. 53, { influenza	16 days
{ pneumonia—bronchitis	14 days
CLERKENWELL; Amwell.	
F. 73, influenza	1 month
St. James.	
M. 56, { bronchitis	4 years
{ last attack succeeded by influenza	3 weeks
M. 2, { influenza	6 days
{ peritonitis	3 days
ST. LUKE; Whitecross Street.	
M. 45, { asthma	4 years
{ influenza	3 weeks
F. 43, { influenza	6 weeks
{ bronchitis with effusion	3 weeks
F. 8 months, influenza	10 days
Old Street.	
F. 1, { influenza	1 month
{ pneumonia	4 days
City Road.	
M. 55, influenza	2 months
EAST LONDON; St. Botolph.	
F. 64, { febrile catarrh	11 days
{ cerebral effusion	5 days
{ paralysis	3 days

WEST LONDON; South.	duration
F. 84, influenza	4 weeks
SHOREDITCH; Hoxton New Town.	
F. 11 months, { influenza	1 week
{ pneumonia	3 days
St. Leonard's.	
F. 1, influenza—measles	14 days
Haggerstone, West.	
M. 53, influenza	6 weeks
rapid decline.	
F. 71, atrophy, result of influenza	6 weeks
F. 73, influenza	3 weeks
BETHNAL GREEN; The Green.	
M. 23, influenza	3 weeks
M. 4 months, influenza	3 weeks
F. 40, { phthisis	5 years
{ influenza	5 weeks
F. 42, influenza	4 weeks
The Towu.	
M. 68, { asthma	16 years
{ pneumonia—influenza	8 weeks
WHITECHAPEL; Spitalfields.	
M. 18, { influenza	4 weeks
{ pneumonia	2 weeks
North.	
M. 62, { influenza	*
{ diseased lungs	*
M. 3 months, influenza	*
M. 6 months, influenza	3 days
F. 6 months, influenza	3 days
STEPNEY; Limehouse.	
M. 60, influenza—dysentery	10 days
F. 62, influenza	5 days
— Mile End, Old Town (Upper).	
M. 57, influenza—enteritis	1 month
— Mile End, Old Town (Lower).	
M. 66, { influenza	6 weeks
{ peripneumonia	*
M. 77, influenza	7 weeks
POPLAR; Poplar.	
M. 3, influenza	3 weeks
M. 4, influenza	10 days
F. 1, influenza	14 days
Bow and Bromley.	
M. 3 months, influenza	7 days
M. 4 weeks, influenza—convulsions	5 days
ST. SAVIOUR; Christ Church.	
F. 73, influenza	*
F. 2, { influenza	3 weeks
{ bronchitis	14 days
{ diarrhoea	5 days
{ convulsions	1 day
BERMONDSEY; St. Mary Magdalen.	
M. 61, { bronchitis	3 months
{ influenza	2 weeks
St. James.	
F. 73, influenza	6 weeks
SOUTHWARK; The Borough Road.	
F. 59, influenza	6 weeks
NEWINGTON; St. Peter, Walworth.	
M. 14 days, influenza	1 week
F. 63, influenza	6 weeks
Trinity.	
M. 60, { influenza	*
{ pneumonia	*
LAMBETH; Waterloo (first part).	
F. 2, influenza—diseased lungs	*
Waterloo, (second part.)	
F. 10, influenza	*
Church, (first part.)	
M. 3, { influenza	3 weeks
{ pneumonia	7 days
M. 25, influenza	3 weeks
F. 1, { influenza	3 weeks
{ pneumonia	14 days
Church, (second part.)	
F. 82, influenza—bronchitis	19 days
Kennington (second part.)	
F. 59, { influenza	1 week
{ bronchitis	3 weeks
{ diarrhoea	1 week
{ disease of the lungs	*
F. 48, { influenza	*
CAMBERWELL; Camberwell.	
M. 45, { influenza	3 weeks
{ effusion on the brain	1 week
St. George.	
F. 2, { influenza	3 days
{ inflammation of the lungs	3 days
GREENWICH; Woolwich Arsenal	
M. 47, influenza—bronchitis	4 days
M. 50, (inquest), influenza	*
West.	
M. 58, influenza	3 days
WANDSWORTH AND CLAPHAM; Wandsworth.	
F. 56, (post mort.), influenza supervening upon an extensively hepatized state of both lungs.	
Putney.	
M. 5 weeks, influenza	5 days
Streatham & Tooting.	
F. 75, influenza	*

NOTE.—In abstracting the causes of death, the classification of cases of primary and secondary disease, is governed by the primary. But this rule has not been observed during the recent prevalence of influenza, all cases in which it is named, though complicated with phthisis, asthma, &c., being assigned to this epidemic.

Purpura, Scoury:—

F. 6 mo., purpura hemorrhagica	1 month
Syphilis:—	
F. 19, syphilis—sloughing of vagina	*
M. 26, syphilis	*
M. 68, abscess in groin	3 months
Hæmorrhage;—Hæmatemesis:—	
M. 50, hæmatemesis	48 hours
F. 80 (inquest), found dead—exhaustion caused by a discharge of blood from the mouth and lungs.	
M. 65, hæmatemesis	3 days
F. 62, hæmatemesis	12 months
M. 49, hæmatemesis	3 years
Hernia:—	
M. 64, strangulated hernia	1 week
F. 84, { scirrhous glands of right groin, femoral	2 years
{ sloughing of the nates from pressure	4 months
In St. Bartholomew's hospital, F. 61, strangulated hernia	*
Nephria, or Bright's Disease:—	
F. 50, { albuminuria	6 years
{ anasarca and sloughing of the integuments of the left leg	*
Diabetes:—	
F. 59, { perineal abscess	3 months
{ diabetes	3 weeks
Stone:—No deaths registered from this cause.	
Childbirth and Metria (or Puerperal Fever):—	
The time elapsing from commencement of labour to death should invariably be returned.	
F. 28, exhaustion from hæmorrhage	26 hours
after delivery.	
F. 20, convalescent from fever, puerperal peritonitis 3 days, in Fever hospital 31 days (from Lambeth)	
F. 29, { childbirth	9 days
{ uterine phlebitis	5 days
F. 30, { fever	4 weeks
{ puerperal fever	7 days
F. 39 (inquest), natural death from internal hæmorrhage in childbed	*
F. 30, puerperal convulsions	2 days
F. 31, childbirth—puerperal fever	2 days
F. 25, { childbirth	9 days
{ puerperal peritonitis	*
F. 39, puerperal convulsions	16 hours
F. 37, { parturition—placenta prævia—hæmorrhage	18 days
{ hæmorrhage	6 days
Intemperance:—	
No deaths registered from this cause.	
Delirium Tremens:—	
M. 45, delirium tremens	3 weeks
F. 67, delirium tremens—typhus	3 days
Cirrhosis:—	
F. 44, cirrhosis	*
Privation, Want of Breast-milk, and Neglect:—	
M. 5, marasmus after fever, produced by want of proper nourishment—dirt and impure air	*
M. 2, marasmus, produced by want of proper nourishment, and from living in a dirty ill-ventilated apartment	*
Daughter of a labourer, 4 (inquest), natural, resulting from want of sufficient and proper nourishment, with exposure to cold	*
F. 3, (sister to the above), exhaustion from the want of proper nourishment—erysipelas	*
M. 16 mo. (inquest), natural causes—induced by neglect in early life	*
F. 10 mo., suddenly, from natural causes, and from poor living.	
F. 11 weeks, marasmus, from want of breast-milk	*
F. 4 mo., bronchitis	18 days
debility from want of breastmilk.	
M. 17 days, inanition—premature birth	*
F. 6 weeks, convulsions, from want of breast-milk—premature birth	*
Malformation:—	
M. 8 days, spina bifida—convulsions	from birth
F. 10 days, fits, probably from congenital malformation of heart	1 day
M. newly born (inquest), accidentally suffocated by the turning back of the tongue—the tongue had no frænum.	
Miscellaneous Causes:—	
M. 9 (post mort.), disease of brain	9 years
skull transparent at the juncture of the coronal and sagittal sutures.	
In Dreadnought Hospital, M. 19 (post mort.), scrofulous disease of right knee	8 months
acute phthisis	4 weeks
abscess in interior of larynx and upper part of the trachea—miliary tubercles disseminated throughout lungs, kidneys, &c.	
In Dreadnought hospital, M. 18 (post mort.), typhus	18 days
extensive ulceration of ilium and large intestine.	
In Dreadnought hospital, M. 22 (post mort.), phthisis	5 months
diarrhoea	3 days
extensive cavities and tubercular deposits in both lungs.	
In Dreadnought hospital, M. 21 (post mort.), bronchitis—erysipelatos inflammation of larynx and trachea	4 days
F. 55 (post mort.), occasional profuse hæmorrhage—malignant ulceration of the neck of the uterus	2 years
hypertrophy of the heart—abscess of left lung.	

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 21; disease of the heart, 2; privation, &c., 2; other specified causes, 13; "found dead," "natural death," "visitation of God," &c., 14—TOTAL, 52 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 30.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 15th January, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination.	Overcast throughout the day.
MON.	Positive, but tension variable throughout the day. It was very strong at 9h. a.m., and from 6h. p.m. to midnight.	Overcast throughout the day.
TUES.	Positive and tension occasionally very strong throughout the day.	Overcast throughout the day.
WED.	Positive, with tension very strong till noon, soon after which time all the instruments went to zero, and nothing was shown during the remainder of the day.	There were a few franks in the clouds during the afternoon; with this exception the sky was overcast throughout the day. Slight rain was falling at about 9h. a.m., and at midnight.
THURS.	Positive, with moderate tension from noon till midnight. Nothing was shown before noon.	Overcast throughout the day. Slight rain was generally falling from 1h. 30m. p.m. till midnight.
FRID.	Positive throughout the day. Tension moderate till 9h. a.m., and strong during the remainder of the day.	Overcast throughout the day, which was very gloomy throughout, particularly at about noon. At 2h. 30m. p.m. it was very dark. A thick misty rain was falling from noon till 7h. p.m.
SAT.	Positive but tension weak till 4h. p.m. Tension very strong during the remainder of the day.	Overcast till about 10h. a.m., and generally cloudless during the remainder of the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The means of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average. The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the main-mast, and read each day at 6h. 30m. a.m., was 36.6; and the mean reading at 7h. 30m. p.m. was 37.4; the mean readings at the Royal Observatory at 6h. a.m. and at 6h. p.m. were 35.9 and 36.8 respectively. The general direction of the wind for the week is N.

REMARKS ON THE WEATHER DURING TWO WEEKS ENDING JANUARY 15, 1848, AS OBSERVED AT BLACKHEATH.—By MR. GLAISHER.

On Sunday, January 2, the temperature of the air increased from 35° to 46° by 1h. 30m., then decreased to 42° by 8h. p.m., and increased from this time till 2h. p.m.; on the 3rd, at which time it was 51°; it then slowly decreased to 48° by midnight. This day was remarkable for its high temperatures, and the large quantity of water mixed with the air. The temperature of the air greatly exceeded that of the average for the season. On Tuesday, January 4, the temperature of the air declined from 47° to 42° at 8h. a.m.; at which value it continued till 10h. a.m.; it then increased to 47° by 1h. 30m.; after which it decreased to 29° by 9h. p.m., and then increased to 38° by midnight. The temperature of the air of this day was nearly 11° less than that of the day preceding, and there was much less water mixed with the air. On Wednesday, January 5, the temperature of the air slowly increased to 46° by 1h. p.m., and declined to 32° by midnight. On Thursday, January 6, the temperature early in the morning was as low as 28° 5, which increased to 38° 2 by 2h. 45m., and from this time till midnight the temperature was nearly uniform, and at the latter time was 35° 5; after midnight it declined to 27° 5 by 7h. a.m. on the 7th day; at 8h. a.m. it was 32°, and at 1h. 15m. a.m. was 40°; it then decreased slowly till midnight, at which time it was 34°. On Saturday, January 8, early in the morning the temperature of the air was 30°, which increased to 37° by 1h. 20m. p.m., and remained at this value throughout the remainder of the day. From the preceding remarks it will be seen that the temperature of the air has been variable, and that it has been several times very low. The average temperature of the air for each day was as follows:

Sunday, 40° 7; Monday, 49° 3; Tuesday, 38° 5; Wednesday, 39° 5; Thursday, 33° 4; Friday, 33° 8; and Saturday, 33° 5. The difference of temperature during each day has been as follows:—

Sunday, 11°; Monday, 4° 7; Tuesday, 5° 2; Wednesday, 14° 0; Thursday, 9° 7; Friday, 12° 5; and Saturday, 7° 0. The weather on Sunday and on Tuesday was fine and the sky was mostly free from cloud, at all other times the sky was mostly covered by cloud. Rain was falling on Monday, Wednesday, Friday, and Saturday.

The average temperature of the dew point for each day was as follows:—Sunday, 39° 0; Monday, 47° 5; Tuesday, 35° 0; Wednesday, 38° 0; Thursday, 32° 4; Friday, 33° 7; and Saturday, 32° 0. The average amount of water contained within a cubic foot of air, was as follows:—

Sunday, 2.9 gr.; Monday, 3.8 gr.; Tuesday, 2.7 gr.; Wednesday, 2.7 gr.; Thursday, 2.4 gr.; Friday, 2.4 gr.; and Saturday, 2.3 gr.

The following Table shows the comparative meteorology from the year 1841.

Week ending January 8.	In the Years							Excess or deficiency in the week ending January 8, 1848, above or below that in the corresponding week in the years.*							Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847		
Temperature of the Air	30.8	36.1	40.0	38.8	39.4	36.5	38.4	+ 8.4	+ 2.3	— 1.6	— 0.4	— 1.0	+ 1.9		+ 1.6
Temperature of the Dew Point	26.4	32.8	57.7	36.0	35.8	35.0	36.6	+ 10.2	+ 3.8	— 1.1	— 0.6	+ 0.8	+ 1.6		+ 2.4
Mean Amount of Water in a Cubic Foot of Air	gr. 2.0	gr. 2.4	gr. 3.0	gr. 2.7	gr. 2.3	gr. 2.5	gr. 2.7	gr. + 0.7	gr. + 0.3	gr. — 0.3	gr. 0.0	gr. + 0.4	gr. + 0.2		gr. + 0.2

On Sunday, Monday, Tuesday, and Wednesday, till 8h. a.m. the temperature was low and nearly uniform, the extreme difference in its value during this interval of time was 6° only, the highest value was 34°, and the lowest was 28°. Between Wednesday at 8h. a.m., and Thursday at 2h. p.m., the value was constantly increasing, and at the latter time was 47°, and this decreased to 40° by 10h. p.m. Between January 13d, at 10h. p.m., and January 15d, at 1h. 30m. a.m. no change whatever took place in the reading of thermometers, the temperature of the air during all this time being 40°. This interval of time is the longest I have ever known of invariable temperature. After 1h. p.m. on Saturday the temperature gradually declined, and that of the air was 30° at midnight.

The average temperature of the air for each day was as follows:—

Sunday, 31° 1; Monday, 31° 0; Tuesday, 31° 8; Wednesday, 35° 3; Thursday, 43° 0; Friday, 40° 0; and Saturday, 35° 5. The average temperature of the dew point was constant during Sunday, Monday, and Tuesday, and was 29°; it was 33° 2 on Wednesday; it was 41° on Thursday; it was 40° on Friday, the air being saturated with moisture all this day; and on Saturday it was 29° 5.

The average weight of water contained in a cubic foot of air, was 2.1 gr. on Sunday, Monday, and Tuesday; it was 2.4 gr. on Wednesday; 2.9 gr. on Thursday; it was 3.1 gr. on Friday, and it was 2.2 gr. on Saturday.

The following Table shows the comparative meteorology of the week since the year 1841:—

Week ending January 15.	In the Years							Excess or deficiency in the week ending January 15, 1848, above or below that in the corresponding week in the years							Deficiency in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847		
Temperature of the Air	31.7	35.7	37.8	40.5	40.0	32.0	35.5	+ 3.8	— 0.2	— 2.3	— 5.0	— 4.5	+ 3.5		0.8
Temperature of the Dew Point	28.9	32.2	35.4	38.9	37.6	27.5	33.0	+ 4.1	+ 0.8	— 2.4	— 5.9	— 4.6	+ 3.5		0.7
Mean Amount of Water in a Cubic Foot of Air	gr. 2.1	gr. 2.4	gr. 2.7	gr. 3.0	gr. 2.6	gr. 2.0	gr. 2.4	gr. + 0.3	gr. 0.0	gr. — 0.3	gr. — 0.6	gr. — 0.2	gr. + 0.4		gr. 0.7

* In reading this table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the week ending

Births and Deaths registered in London

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 2.

(The tabular abstract on the first page is for the week ending Saturday, Jan. 22nd. The following selection of cases is made from the Returns for the week, ending Jan. 15th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Burns and Scalds:—	duration
M. 30 (no inquest), phthisis, the result of injured spine and kidneys by a fall	7 months ago	F. 72 (post mort.), concussion of the brain from a blow on the right temple—no evidence how	*	In St. George's Hospital, son of a cabinet-maker, 8, burn of chest and arms—house took fire when poking the fire in a kitchen grate	35 hours
In Westminster Hospital, stonemason, 27 (post mort.), inflammation of the abdomen, from rupture of small intestines, by falling from a platform when at work at the houses of Parliament	2 days	Wounds:—		F. 60, burnt by the house taking fire, (the cause unknown)	instant
Weaver, 60, found dead with a wound on his head, not mortal, at the foot of a flight of stairs—how caused unknown	*	In St. George's Hospital, M. 23 (no inquest), lacerated wound of thigh—amputation—phthisis	*	Daughter of a labourer, 1, scalds by falling into a pan of boiling water, placed on the floor for a foot-bath	24 hours
In University College Hospital, bricklayer's labourer, 47, injuries of the chest from the falling of a wall at the North-Western Railway Terminus (cause of fall unknown) 1 day	1 day	F. 26 (no inquest), part of a needle forced into the foot—crisipelas	14 days	Poison:—	
F. 72, erysipelas—fracture of the left leg—contused wound—leg run over by a horse and cart—manslaughter against some person or persons unknown.		Drowning:—		M. 1, accidentally poisoned by taking poisonous pills without intention to destroy life	*
In Westminster Hospital, ostler, 58, compound fracture of right leg—no sufficient evidence how fracture was caused	7 months	Wife of a contractor, 34, found dead, without marks of violence, apparently drowned.		M. 39, (post mort) vitriol—suicide in temporary insanity	9 months
typhoid symptoms	2 days	Watkinson, 31, found dead, without marks of violence, apparently drowned.		F. 29, poisoned herself in a temporary state of insanity	*
said to have been thrown from a gig by the horse running away.		Sailor, 15, found dead, apparently drowned.		In sub-district of Bow, F. 5 mon., natural death from fits caused by disease, augmented by pestilential air from bad drainage	*
M. 37, blows on his side, given with a shovel, —manslaughter against Daniel Crudginton and Joshua Kemp	*	M. 55, found dead in a ditch of water, without marks of violence.		Neglect:—	
		M. 77, found dead, without marks of violence, apparently drowned.		F. (unknown) newly-born (p.m.) exposure and neglect—wilful murder by some person unknown—found dead.	
		Frame-worker at saw-mills, 44, drowning; seized with a fit and fell into the water when walking near the basin in the yard at Kelk's saw-mills, Pimlico, (under water about a minute).		Other Violence:—	
		Hanging and Suffocation:—		M. 2 days (no inq.), supposed an extensive effusion under the scalp, caused by difficult parturition	2 days
		M. 25, executed.			
		Baker, 51, hanged himself to a hedpost in a temporary state of insanity.			

DEATHS BY SMALL POX, INFLUENZA, PURPURA, SYPHILIS, HÆMORRHAGE, HERNIA, NEPHRITIS (OR BRIGHT'S DISEASE), DIABETES, STONE, CHILDBIRTH AND METRIA (OR PURPERAL FEVER), INTEMPERANCE, DELIRIUM TREMENS, CIRRHOSIS, PRIVATION AND NEGLECT, WANT OF BREASTMILK, MALFORMATION, ETC.

Small Pox:—

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

M. 2, variola confuens, (not vaccinated)	7 days
F. 17, variola, confuens, maligna, (not vac.) ..	21 days
F. 11, small pox, (after vaccination)	*
M. 11 months, variola, (not vaccinated)	7 days
F. 4 months, small pox, (not vaccinated)	*
M. 21, natural small pox, (not vaccinated) ..	11 days
M. 1, natural small pox, (not vaccinated) ..	*
M. 2, small pox, natural	*
vaccinated 3 times 2 years ago without success.	

Small Pox (continued):—

M. 7 months, small pox	7 days
first attack, not vaccinated.	
F. 3, small pox	9 days
first attack—vaccinated without effect at the age of 9 months.	
M. 1, small pox	*
vaccinated when a month old without effect.	
M. 2, variola, natural	*
{ small pox, (not vaccinated)	14 days
F. 7 mon., { inflammation of the chest	*
M. 3, small pox	11 days
first attack—not vaccinated.	

Small Pox (continued):—

In the Royal Ordnance Hospital, M. 18, fever ..	*
small-pox (vaccinated)	*
disease of lungs	12 days
F. 10 months, small pox (not vaccinated)	4 days
M. 3, small pox	1 week
M. 15 days, small pox (not vaccinated)	9 days
M. 3 weeks, small pox (not vaccinated)	11 days
M. 2, variola	*
M. 3 months, small pox (natural)	9 days
In Small Pox Hospital, F. 8, small pox confluent (natural)	9 days

Small Pox (continued):—	duration

DAY	ELECTRICITY	GENERAL REMARKS	
SUN.	Positive and tension strong at each examination. At noon and at 3 p.m. sparks were obtained.	The sky was cloudless throughout the day. A fog prevailed during the afternoon. An aurora at night, and the magnets disturbed.	<p>The height of the cistern of the barometer is considered to be 129 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6 a.m. to 6 p.m., and at midnight. The means of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.</p> <p>The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.</p> <p>The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.</p> <p>• In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.</p> <p>The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 32.4; and the mean reading at 7h. 30m. p.m. was 33.9; the mean readings at the Royal Observatory at 6h. a.m. and at 6h. p.m. were 27.1 and 33.6 respectively.</p> <p>The direction of the wind for the first three days of the week was variable, and the mean direction for the four last was N.N.E.</p>
MON.	Nothing was shewn till 1h. 50m. p.m. From 1h. 50m. p.m. till 3h. p.m. strong negative electricity was seen and frequent sparks were obtained. Nothing was shewn at any other examination.	The sky was overcast throughout the day: the prevailing clouds were cirrostratus and scud. Rain commenced falling at 1h. p.m. and continued until midnight.	
TUES.	Positive and tension variable throughout the day.	The sky was covered with cirrostratus and scud till 10h. a.m., at which time the clouds gradually dispersed. The sky remained clear till 4h. p.m. and was overcast afterwards till midnight. At 5h. 40m. p.m. a lunar halo, whose radius was 23°, was observed.	
WED.	Nothing was shewn till 9h. a.m. From 9h. a.m. till noon positive with tension weak. From noon till midnight positive with very strong tension.	The sky was overcast throughout the day: the prevailing clouds were cirrostratus and scud.	
THURS.	Positive with tension variable till 9h. a.m. From 9h. a.m. till 3h. p.m. very strong tension, and weak during the remainder of the day.	The sky was covered with cirrostratus and scud throughout the day. Some light sleet fell at intervals during the morning.	
FRI.	Nothing was shewn at 6h. a.m. nor at noon; at other times it was positive with variable tension.	The sky was overcast throughout the day; the prevailing clouds were cirrostratus and scud. Soon after 6h. a.m. light snow commenced falling, and continued falling slightly till noon.	
SAT.	Positive and tension weak till 9h. a.m. From noon till 3h. p.m. tension very strong, and variable afterwards.	The sky was covered with cirrostratus and scud throughout the day. Thin misty rain fell occasionally during the evening.	

REMARKS ON THE WEATHER DURING TWO WEEKS ENDING JANUARY 22, 1848, AS OBSERVED AT BLACKHEATH.—By MR. GLAISHER.

On Sunday, January 16, the temperature of the air increased from 28° at 7h. A.M. to 34° at 2h. P.M., and decreased to 24.5° by midnight. On Monday the temperature increased rapidly till 1h. P.M., at which time it was 44°, it sank to 36° by midnight, and to 32° after midnight, and continued at this value till 7h. A.M. On Tuesday, at 10h. 30m. A.M. its value was 36°, it then declined, and between 11h. A.M. and 4h. P.M. it was alternately at 32° and at 35°; at 5h. P.M. it was 31.5°, and after this the value increased to 34° at midnight, and decreased to 32° after midnight. On Wednesday, January 19, the temperature of the air increased to 36° by 3h. P.M., decreased to 33° by 5h. 30m. P.M., and remained at this value till midnight; after midnight it still further decreased to 30°. From Thursday, January 20d, at 7h. A.M. till the end of the week, January 22d, at midnight, there was very little change of temperature; its greatest and least values between these times were 33.2° and 30°.

The average temperature of the air for each day was as follows:—
Sunday, 29.3; Monday, 35.6; Tuesday, 33.8; Wednesday, 33.5; Thursday, 30.7; Friday, 31.1; and Saturday, 31.2.
The difference of temperature during each day was as follows:—
Sunday, 9.5; Monday, 17.2; Tuesday, 4.7; Wednesday, 5.0; Thursday, 2.3; Friday, 2.2; and Saturday, 2.5.
The temperature of the dew point each day was
Sunday, 27.0; Monday, 32.6; Tuesday, 27.8; Wednesday, 29.5; Thursday, 25.7; Friday, 27.8; and Saturday, 28.7.
The average amount of water contained within a cubic foot of air was as follows:—
Sunday, 1.5 gr.; Monday, 1.9 gr.; Tuesday, 1.4 gr.; Wednesday, 1.7 gr.; Thursday, 1.0 gr.; Friday, 1.5 gr.; and Saturday, 1.7 gr. With the exception of Sunday, and part of Tuesday the sky has been wholly covered by cloud. On Sunday, at 9h. 45m. P.M., some fine red streamers of an aurora were seen. Some rain fell on Monday. The air during the week has had but little water mixed with it.
The following Table shews the comparative meteorology since the year 1841:—

Week ending January 22.	In the Years,							Excess or deficiency in the week ending January 22, 1848, above or below that in the corresponding week in the years						Deficiency in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	32.3	38.3	38.3	38.6	47.0	31.1	32.2	—0.1	—6.1	—6.1	—6.4	—13.8	+1.1	3.2
Temperature of the Dew Point	30.7	36.8	34.9	35.8	44.5	30.5	28.4	—2.3	—8.4	—6.5	—7.4	—16.1	—2.1	7.1
Mean Amount of Water in a Cubic Foot of Air	2.3	2.8	2.6	2.7	3.2	2.1	1.5	—0.8	—1.3	—1.1	—1.2	—1.7	—0.6	1.1

* In reading this table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the week ending 1843, January 22, was 0.1 less the temperature of the corresponding week of 1842, &c., &c.
Errata in last week's report, sum of rain in the Week, for 0.00 read 0.09.
,, in last line, for 1843, January 1, read 1848, January 8.

Births and Deaths registered in London

During the Week ending Saturday, January 29th, 1848.

Influenza (continued):—	duration
WANDSWORTH; Stratham and Tooting Graveney.	
M. 75, { influenza	5 weeks
{ fever—debility	*
NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending January 22nd; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.	
Syphilis:—	
M. 6 weeks, syphilis and debility	14 days
Malformation:—	
F. 12 days, { jaundice from absence of gall-bladder ..	3 days
(post mort.) { hæmorrhage from the navel ..	3 days
M. 10 days, malformation of heart.	
M. 14 days, atrophy, from inability to take nourishment, in consequence of hare-lip and fissured palate.	
M. 6 weeks, want of nourishment, on account of difficult deglutition	*
Hernia:—No deaths registered from this cause.	
Diabetes:—	
M. 44, diabetes	*
F. 27, diabetes—exhaustion	9 weeks
In London Hospital, M. 26, diabetes	*
Stone:—	
In King's College { calculus in bladder	*
Hospital, M. 34, { lithotomy	3 days
M. 68, { calculus of the bladder	*
{ hepatitis—dropsy	8 weeks
Childbirth and Metria (or Puerperal Fever):—	
The time elapsing from commencement of labour to death should invariably be returned,	
F. 21, puerperal convulsions	5 days
F. 36, { uterine hæmorrhage (8th month of ..	12 days
{ utero-gestation)	30 minutes
F. 22, phrenitis after delivery	8 days
F. 29, childbirth	3 days
inflammation of the bowels and obstruction.	
F. 33, exhaustion from labour	*
F. 29, debility—lying-in	6 days after delivery
F. 27, { childbirth	9 days
{ peritonitis	9 days
F. 32, puerperal fever	5 days
F. 26, puerperal fever	3 days
F. 28 (post mort.), childbirth	6 days
flooding—inflammation of peritoneum and effusion—inflammation and softening of ovaries.	
F. 29, uterine phlebitis	7 weeks
F. 29, { childbirth	10 days
{ puerperal peritonitis	5 days
F. 24, puerperal fever	2 days
Disease and Childbirth:—	
F. 35, dropsy; premature labour	*
Delirium Tremens:—	
M. 37, delirium tremens	6 days
F. 43, { delirium tremens	3 days
{ bronchitis	10 days
M. 35, delirium tremens	10 days
In Dreadnought Hospital, M. 24 (post mort.), delirium tremens; erysipelas of head and face, 17 days congestion of brain	
M. 45, delirium tremens	6 days
Other Disease and Delirium Tremens:—	
M. 41, { erysipelas	8 days
{ delirium tremens	3 weeks
M. 48, { pneumonia	3 days
{ delirium tremens	several years
M. 42, { disease of liver	40 hours
{ delirium tremens	
Intemperance;—No deaths registered from this cause	
Privation:—	
In Westminster Hospital, M. 8, starvation and marasmus	6 months
Want of Breast-milk, &c.:—	
F. 3 weeks, inanition and inability to take food ..	*
M. 3 months, want of breastmilk	*
M. 3 months, dry-nursing	14 days
M. 10 days, inanition	*
M. 5 weeks, inanition	*
M. 26 days, inanition	*
Purpura, Scurvy:—	
Son of a waiter, 1 (inquest), natural death—purpura hæmorrhagica from debility ..	
F. 61, { purpura	8 days
{ serous apoplexy	12 hours
{ catarrhus chronicus	1 year
M. 75, { purpura	long standing
{ stricture of urethra	
Hæmorrhage;—Hæmatemesis:—	
F. 50, { chronic ulcer of the stomach	7 years
{ hæmatemesis from erosion of large blood-vessel ..	*
M. 59, rupture of a blood-vessel	*
M. 54 (inquest), rupture of a blood-vessel connected with the heart—natural death ..	30 minutes
Miscellaneous Cases:—	
In Guy's Hospital, M. 34, phlebitis—peritonitis (after operation)	*
In Kennington (second part), M. 20, English cholera	1 day
In Lambeth Church (first part), M. 8 months, infantile cholera	14 days
In Dreadnought { dysentery	4 months
Hospital, { general anæmia—ulceration ..	4 months
M. 46, (p.m.), { and congestion of large intestine ..	*
In Dreadnought { disease of heart	*
Hospital, { anæmia	7 weeks
M. 45, { granular disease of kidneys ..	9 months
(post mort.) { hypertrophy and dilatation ..	of all the cavities.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 17; apoplexy, 3; rupture of a bloodvessel connected with the heart, 1; purpura, 1; other specified causes, 6; "found dead," "natural death," "visitation of God," &c., 6—TOTAL, 34 cases.
THE NUMBER OF CASES IN WHICH IT IS REPORTED THAT A POST MORTEM EXAMINATION WAS HELD, IS 35.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 29th January, 1848.

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive, with tension weak at each examination.	The sky was overcast, with cirrostratus and scud throughout the day. Light snow fell frequently.
MON.	Positive and tension weak during the day, except at 3h. p.m., when nothing was shewn.	The sky was overcast throughout the day; the prevailing clouds were cirrostratus and scud.
TUES.	Positive and tension weak at each examination. Except at 3h. p.m. when nothing was shewn.	The sky was overcast with cirrostratus and scud throughout the day. A thin misty rain fell during the evening.
WED.	Positive and tension weak till 3h. p.m., and strong from this time till midnight.	The sky was generally overcast throughout the day, except at about 10h. p.m., when it became clear for a short time.
THURS.	Positive and tension variable throughout the day.	The sky was cloudless till 6h. a.m., about one half covered till 4h. p.m. and overcast afterwards till midnight. The prevailing clouds were, cumuli, cumulostrati, cirrostratus, and scud.
FRID.	Positive and tension moderate till 9h. a.m., very strong till 3h. p.m., and variable afterwards.	The sky was overcast till 10h. a.m., nearly cloudless till 1h. p.m., and overcast afterwards. The prevailing clouds were cirrostratus and scud. Snow commenced falling soon after 6h. a.m., and continued falling till noon, and at intervals during the remainder of the day. The magnets were disturbed during the evening. A very cold day.
SAT.	Positive and tension moderately strong at each examination.	The sky was overcast till 9h. a.m.; the amount of cloud from this time till 4h. p.m. was variable, and it was generally overcast afterwards till midnight. The prevailing clouds were cirrostratus and scud. At 11h. 30m. p.m. a shower of rain fell.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The means of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average. The departures this week have been great till Saturday. There was a great difference of temperature between Friday and Saturday.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the main-mast, and read each day at 6h. 30m. a.m., was 28.3; and the mean reading at 7h. 30m. p.m. was 31.3; the mean readings at the Royal Observatory at 6h. a.m. and at 6h. p.m. were 27.3 and 29.4 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JANUARY 29, 1848, AS OBSERVED AT BLACKHEATH.—By MR. GLAISHER.

On Sunday, January 23, the temperature of the air increased from 29° to 32° by 2h. p.m., it continued at this value till 6h. p.m.; at 7h. p.m. it was 30° 2, and at midnight it had increased to 32° again. On Monday the temperature of the air increased to 37° by 1h. p.m., and decreased to 31° 2 by midnight, and to 29° 0 early on the morning of Tuesday, it then slowly increased to 32° 5 by 1h. p.m., and then slowly decreased to 30° 2 at midnight, to 25° 1 by 7h. a.m. on the morning of Wednesday, the 26th, to 24° 5 by 9h. a.m., and remained at this value with very little change till 4h. p.m.; at 5h. p.m. it was 22° 5; and at midnight it was 20°. On Thursday, the 26th, the temperature of the air increased to 29° 5 by 3h. p.m., and decreased to 24° by midnight. On Friday morning the temperature of the air at 7h. a.m. was 18°, at 8h. a.m. it was 17° 5; at 9h. a.m. it was 17° 2, (being the lowest point on this very severe day); it was 18° 0 at noon, it was 21° at 1h. p.m., and it remained at about this value till 7h. p.m., (the average temperature of the air for the day to this time was 18° 9); after 7h. p.m. the temperature began to increase rapidly and was 26° 8 at 10h. p.m., and it was 31° at midnight, being the highest point reached during the day. From Thursday, January 20, at 7h. a.m. till this time (January 28d.), at midnight, the temperature of the air was almost wholly below the point 32°. On Saturday, January 29, the temperature increased rapidly, and was 41° at 2h. p.m., and decreased to 37° at midnight.

The average temperature of the air for each day was as follows:—
Sunday, 30° 8; Monday, 33° 9; Tuesday, 30° 7; Wednesday, 24° 0; Thursday, 25° 0; Friday, 24° 0; and Saturday, 36° 0.

The difference of temperature during each day was as follows:—
Sunday, 2° 5; Monday, 5° 4; Tuesday, 3° 5; Wednesday, 4° 5; Thursday, 9° 0; Friday, 14° 0; and Saturday, 10° 0.

The average temperature of the Dew Point for each day was
Sunday, 26° 6; Monday, 30° 1; Tuesday, 26° 0; Wednesday, 17° 4; Thursday, 18° 0; Friday, 16° 0; Saturday, 33° S. During a part of Friday the temperature of the Dew Point was as low as 10° and 11°.

The average amount of water contained within a cubic foot of air was as follows:—
On Sunday, 1.9 gr.; Monday, 2.2 gr.; Tuesday, 1.9 gr.; Wednesday, 1.4 gr.; Thursday, 1.4 gr.; Friday, 1.3 gr.; and Saturday, 2.5 gr.

The weather during this week till Friday was very severe, the temperatures were greatly below their averages for the season, particularly on Wednesday, Thursday, and Friday.

Till Saturday morning, the air passed from the N.; N.E. or E.; on this day it passed from the South.

The following Table shews the comparative Meteorology since the year 1841:—

Week ending January 29.	In the Years,							Deficiency in the week ending January 29, below that in the corresponding week in the years						Deficiency in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847

old age.
M. 7 weeks, influenza 5 days
Peckham.
F. 1, influenza—tubercular pneumonia—exhaustion 10 days
F. 1, { influenza 10 days
hooping cough 10 days
F. 76, { paralysis 25 years
influenza 7 days
ROTHERHITHE; Rotherhithe.
M. 2, influenza (no medical attendant) *
GREENWICH; St. Pauls, Deptford.
M. 72, asthma—influenza 6 weeks
Woolwich Arsenal.
M. 45, influenza—bronchitis 10 days
M. 64, { asthma 3 years
influenza 9 days
F. 42, { influenza 1 week
exhaustion 1 day
Greenwich, West.
F. 77, { influenza 1 month
chronic bronchitis many year
NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending January 29th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.
SYPHILIS:—
M. 6 weeks, secondary syphilis from birth
MALFORMATION:—
F. 4 days, anus imperforatus.
F. 2 hours, malformation.
M. 2 months, debility from birth
from foramen ovale open.
F. 2, pertussis—cyanosis 3 weeks
F. 5, malformation.
F. 1, debility from birth
born without palate—no medical attendant.
M. 3 days, rectum imperforatum.
F. 3 days, monstrosity.
HERNIA:—
F. 61, { strangulated femoral hernia 24 hours
operation *
(p.m.) { peritonitis and suppuration between layers of omentum about 5 days
In Bartholomew's Hospital, F. 62, hernia and debility *
M. 59, old hernia (scrotal)..... *
M. 59, { morbus cordis—haematemesis *
hernia 16 days
DIABETES:—
M. 51, diabetes mellitus—congestion and effusion of the brain *
F. 27, diabetes *

Stone:—No deaths registered from this cause.

Childbirth and Metria (or Puerperal Fever):—
The time elapsing from commencement of labour to death should invariably be returned.
F. 26, puerperal fever 14 days
F. 23, { childbirth 21 days
puerperal fever *
F. about 28, puerperal fever..... 12 days
F. 28, puerperal fever..... 3 days
F. 22, puerperal peritonitis 4 days
F. 30, peritonitis after labour 7 days
F. 26, { peritoneal inflammation 3 weeks
after confinement 2 weeks
F. 29, puerperal fever after delivery on the 8th day
F. 27, puerperal fever subsequent to abortion (twins of four months' pregnancy) 4 days
F. 28 (post mort.), puerperal mania 23 days
F. 22, exhaustion after parturition 3 weeks
F. 42, exhaustion from haemorrhage after childbirth 5½ hours
F. 29, (post mort.) inflammation of the womb after confinement 3 days
F. 41, haemorrhage after delivery..... *
F. 26, childbirth 5 days
F. 22, { hysteritis 7 days
diarrhoea 4 days
F. 26, miscarriage *
DISEASE AND CHILDBIRTH:—
F. 38, phthisis pulmonalis..... 3 weeks after delivery
F. 40, { phthisis 6 weeks
abortion 4 weeks
epileptic fits 3 days
F. 31, { miscarriage 5 months
delirium tremens, diarrhoea, exhaustion 3 days
DELIRIUM TREMENS:—
F. 32, delirium tremens..... 14 days
F. 46, delirium tremens 4 weeks
M. 67, catarrh—delirium tremens 4 days
M. 51, { erysipelas 9 days
delirium tremens *
INTERPERANCE:—
F. 56, exhaustion from intemperance *
F. 45, diseased viscera from intoxicating liquors, 2 months
Blacksmith 40, (ing.) found dead, apparently from the effects of excessive drinking.
COLD:—
F. 76, old age—exposure to cold *
PRIVATION:—
In St. Mary, Paddington, M. 45, (no inquest) congestion of the brain induced by exposure to cold, and destitution 2 days
WANT OF BREAST-MILK, &c.:—
atrophy 4 days
M. under 1, { want of breast-milk *
thrush *
M. 1 hour, want of (milk?) *
{ supposed dentition 7 days
without breast-milk from birth
no medical attendant.
F. 3 mon., (ingest) natural death—atrophy from want of mother's milk *
F. 1, want of proper nourishment—marasmus 3 months
M. 1 day, inanition *
PURPURA, SCURVY:—
M. 68, { purpura about 1 year
(p.m.) { diarrhoea 5 days
M. 9 mon., purpura *
HAEMORRHAGE;—Haematemesis:—
F. 49, haemorrhage from the rupture of a blood-vessel, from a fit of coughing *
F. 6 mon., internal haemorrhage 3 days
MISCELLANEOUS CASES:—
In Westminster Hospital, M. 47, diseased joint—amputation *
In University College Hospital, F. 54, (p.m.), stricture of the rectum—peritonitis (sub-acute) chronic bronchitis..... 3 months
{ atrophy of mesenteric glands and consequent emaciation 3 months
M. 21, { amaurosis producing blindness 5 years
In St. Bartholomew's Hospital, M. 23, all the symptoms of glanders *
In London Hospital, M. 9 (ingest), hydrophobia—how caused unknown *
F. 19 hours, retained in uterus, after the expulsion of the placenta in a twin case (respiration never fully performed) *
In Dreadnought Hospital, { typhus 47 days
diarrhoea 35 days
M. 16, { ulceration of ilium and large intestine (post mort.) *
stricture 11 years
division of stricture 15 days
In Dreadnought Hospital, M. 55, { erysipelas of wound 3 days
chronic inflammation of bladder and kidneys 2 years
(post mort.) { diffused bronchitis and pneumonia 7 weeks
extensive pleuritic adhesions of both sides *
congestion of lungs *
old ulceration of large intestine *
In Dreadnought Hospital, M. 22, { phthisis 7 months
extensive old adhesions of both pleurae *
(post mort.) { large cavities and deposits of softened tubercle in both lungs *

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 35; apoplexy, 1; disease of the heart, 3; aneurism, 1; ulceration of uterus, 1; spasm of throat, 1; intemperance, 1; hydrophobia, 1; other specified causes, 15; "found dead," "natural death," "visitation of God," &c., 16—TOTAL, 75 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 45.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 5th February, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, to (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature			Wind as deduced from Osler's Anemometer.										Mean Amount of Cloud, 0-10	Rain in inches, read at midnight
			Dry			Dew Point	Highest in the sun, as shown by a self-register- ing Thermometer read at midnight	Lowest in the sun, as shown by a self-register- ing Thermometer read at midnight	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean from 6 Diffs.	Greatest	Least	General Direction		Pressure in lbs. on the square foot		Mean of 94 Obs.	Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive at 9h. a.m. At every examination afterwards negative, with very strong tension.	The sky was generally overcast throughout the day; the prevailing clouds were cirrostratus and scud. Thin rain commenced falling at 11h. 30m. a.m., and continued falling at intervals during the remainder of the day.
MON.	Nothing was shewn till noon; negative and tension strong at other examinations.	The sky was covered with cirrostratus and scud throughout the day. Rain and sleet fell frequently during the afternoon and evening.
TUES.	Positive and tension strong till 3h. p.m. At other examinations nothing was shewn.	The sky was cloudless throughout the day.
WED.	Positive and tension variable at each examination, except at 6h. a.m., when nothing was shewn.	The sky was overcast till 10h. a.m.; generally cloudless from this time till 6h. p.m., and overcast afterwards. The prevailing clouds were cirrostratus, fleecy, and scud.
THURS.	Positive and variable tension throughout the day.	The sky was overcast till 6h. a.m., about one-half covered till 2h. p.m., and variable afterwards. The prevailing clouds were cirrostratus and scud.
FRI.	Positive and tension weak. At 3h. p.m., and at midnight, nothing was shewn.	The sky was overcast throughout the day; the prevailing clouds were cirrostratus and scud. Thin rain commenced falling soon after noon, and continued at intervals during the remainder of the day.
SAT.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; the prevailing clouds were cirrostratus and scud. Rain commenced falling soon after 6h. a.m., and continued till noon; it fell again at 3h. p.m., and continued falling at intervals till midnight.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower;" than the average. The departures from the average have been variable this week, and at the end of the week they were very large in excess.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 39.9; and the mean reading at 17h. 30m. p.m. was 40.7; the mean readings at the Royal Observatory at 6h. a.m. and at 6h. p.m. were 39.6 and 40.1 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING FEBRUARY 5, 1848, AS OBSERVED AT BLACKHEATH.—By MR. GLAISHER.

On Sunday, January 30, the temperature of the air increased from 37° to 48° by 2h. 30m. p.m., then decreased to 43° by 5h. p.m., and again increased from this time till midnight, at which time it was again 48°. Rain was falling frequently during the day. On Monday the temperature of the air was decreasing all day, and it was 34.5 at midnight; the day was gloomy, snow, rain, and sleet were falling frequently. On Tuesday, February 1, the temperature of the air continued to decrease till 8h. a.m., at which time it was 30.5; it then increased to 36° by 3h. p.m., and decreased to 31° by midnight. The sky was clear during the greater part of the day, but the atmosphere was thick and hazy. On Wednesday the temperature of the air increased to 44.5 by 2h. p.m., and decreased to 35.5 by midnight; the sky was partially free from clouds. On Thursday, the temperature increased to 44° by noon, and remained at this value till 3h. p.m., after which it decreased to 32° by midnight. A clear night. On Friday the temperature of the air increased to 46.5 by 2h. p.m., it then decreased to 43.5 by 5h. p.m., and then increased rapidly, and was 50° at midnight; the sky was cloudy throughout, and some rain fell. On Saturday, there was very little change of temperature indeed, the whole difference during the day was 2° only, and the temperature was greatly above the average for the season. The day was gloomy, the sky was cloudy throughout the day, some rain fell, and there was a large quantity of water mixed with the air.

The average temperature of the air was as follows:—
Sunday, 38.0; Monday, 34.5; Tuesday, 33.2; Wednesday, 37.3; Thursday, 38.1; Friday, 41.0; and Saturday, 52.0.

The difference of temperature during each day was as follows:—
Sunday, 10.0; Monday, 5.5; Tuesday, 5.5; Wednesday, 14.5; Thursday, 12.2; Friday, 11.0; and Saturday, 2.0.

The average temperature of the Dew Point for each day was
Sunday, 42.7; Monday, 34.5; Tuesday, 24.7; Wednesday, 33.3; Thursday, 33.2; Friday, 39.7; and Saturday, 49.6.

The average amount of water contained within a cubic foot of air was as follows:—
Sunday, 3.4 gr.; Monday, 2.6 gr.; Tuesday, 1.8 gr.; Wednesday, 2.4 gr.; Thursday, 2.5 gr.; Friday, 3.1 gr.; and Saturday, 4.2 gr.

On Monday the air passed from the N.E.; on Tuesday it passed chiefly from the N.; and on the remaining days it passed from W. to S.S.W.

The following Table shews the comparative Meteorology since the year 1841.

Week ending February 5.	In the Years,							Excess or Deficiency in the week ending February 5, above or below that in the years*							Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847		
Temperature of the Air	38.9	42.6	34.8	33.6	45.1	33.5	39.2	+ 0.3	— 3.4	+ 4.4	+ 5.6	— 5.9	+ 5.7		1.1
Temperature of the Dew Point	37.3	39.0	30.5	30.8	41.9	30.6	36.9	+ 0.4	— 2.1	+ 6.4	+ 6.1	— 5.0	+ 6.3		2.0
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.		gr.
Mean Amount of Water in a Cubic Foot of Air	2.8	3.1	2.3	2.3	3.3	2.2	2.9	+ 0.1	— 0.2	+ 0.6	+ 0.6	— 0.4	+ 0.7		0.2

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, February 5, was 0.3 above the temperature of the corresponding week of 1842.

Births and Deaths registered in London

During the Week ending Saturday, February 12th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and HAMPSTEAD, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 5.

(The tabular abstract on the first page is for the week ending Saturday, Feb. 12. The following selection of cases is made from the Returns for the week ending Feb. 5th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Burns and Scalds:—	duration
In Middlesex Hospital, F. 41 (no inquest), bruised brain on left hemisphere, from injury of the head, caused by falling down stairs	*	M. 80 (no inquest), mortification of a wound.	8 days	F. 4, burns from her clothes taking fire, in moving a kettle on the grate without a fire-guard, in the absence of the mother	*
F. 79, debility from old age, accelerated by the shock arising from injuries received in an accidental fall	about 3 weeks	F. 63 (no inquest), paralysis	2 years	Wife of a warehouseman, 30, accidental death from a fall into the fire	1 week
Carman, 21, accidental by a blow on the head from the handle of a craue	5 weeks	(assigned to erysipelas in the abstract.)	1 week	Son of a mason, 3, burns by his clothes accidentally taking fire, supposed from playing with lucifer matches	instantly
M. 28, bodily injuries from being crushed between timbers, which were being lowered by a chain which snapped	instantly	Drowning:—		Poison:—	
F. 96 (no inquest), injury to the left arm	*	Son of a master-mariner, 7, found dead—supposed to have been drowned—without marks.		Single woman, of no occupation, 21 (post mort.) suicide by oxalic acid, in temporary insanity	about 1 hour
NOTE.—It should be stated how the injury was caused.		F. 20 (person unknown), found dead in the London Dock basin, without marks of violence (apparently drowned).		F. 17 (post mort.), arsenic, probably suicide; but not clearly proved whether under insanity.	
F. 76 (no inquest), fracture of the neck of the thigh bone	11 months	Sea apprentice, 16, accidental death from drowning.		F. 24, suicide by essential oil of almonds, being in a state of mental aberration	instantly
low fever	2 months	Sailor, about 36, found dead without marks—apparently drowned.			
Wounds:—		Hanging and Suffocation:—			
M. 38, cut his throat with a razor, in temporary insanity	30 minutes	M. 49, hanging himself with a handkerchief to the rail of a bedstead (in temporary insanity)	died instantly		

DEATHS BY SMALL POX, INFLUENZA, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH AND METRIA, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, WANT OF BREAST-MILK, PURPURA, HÆMORRHAGE, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Small Pox (continued):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		In Small Pox Hospital, F. 17, small pox, confluent, (unprotected)	13 days	M. 3, small pox	10 days
F. 11 months, variola	5 days	In Small Pox Hospital, F. 19, small pox, confluent (unprotected)	8 days	M. 5, small pox, confluent	*
F. 1, small pox (not vaccinated)	3 days	In Small Pox Hospital, M. 53, small pox, confluent (unprotected)	6 days	8 days after vaccination without effect.	
F. 1, { variola	6 days			F. 2, small pox	8 days
{ pneumonia	2 days			M. 1, small pox (not vaccinated)	1 month

DEATHS BY SMALL POX, INFLUENZA, SYPHILIS, &c. &c. (continued):—

Small Pox (continued):—	duration
F. 3 weeks, small pox (natural)	10 days
M. 3, small pox (first attack—not vaccinated)	12 days
M. 2, variola (first attack—not vaccinated)	8 days
F. 4, small pox	about 10 days
first attack—not vaccinated—no medical attendant.	
F. 7 months, small pox	8 days
first attack—not vaccinated.	
F. 2, small pox	*
first attack—not vaccinated.	
M. 1, small pox	7 days
vaccinated with effect at the age of 6 months.	
M. 3, small pox (not vaccinated)	5 days
F. 1, variola (not vaccinated)	5 days
M. 4, small pox	8 days
first attack, vaccinated 3 years before eruption (two cicatrices left).	
F. 2, variola (not vaccinated)	8 days
F. 3, small pox (not vaccinated)	*
F. 5, small pox (not vaccinated) no medical attendant	*
M. 6 months, confluent small pox (not vaccinated)	*
F. 1, small pox (not vaccinated)	*
F. 29, small pox	14 days
first attack—not vaccinated.	
F. 7, small pox	14 days
first attack—vaccination attempted about 7 years ago, without success.	
M. 23, confluent small pox (vaccinated some years since)	*
Influenza:—	
KENSINGTON; St. Paul's, Hammersmith.	
F. 68, { chronic bronchitis	some time
{ influenza	5 days
Brompton.	
M. 74, influenza	3 weeks
CHELSEA; South.	
F. 75, influenza—erratic gout	*
St. GEORGE; Belgrave.	
M. 73, influenza	12 days
F. 55, { influenza	3 weeks
{ typhus	*
WESTMINSTER; St. John the Evangelist.	
M. 68, influenza—typhus	18 days
F. 76, { eczema	2 days
{ influenza	3 weeks
St. MARYLEBONE; The Rectory.	
F. 70, influenza	*
St. Mary.	
M. 61, influenza	4 weeks
F. 34, influenza; inflammation of the deep-seated veins of the pelvis was developed, which preceded peritonitis.	*
Christ Church.	
M. 65, { chronic bronchitis	2 years
{ influenza	4 months
St. John's.	
M. 53, { hemiplegia	4 months
{ influenza	3 weeks
Gray's Inn Lane.	
F. 52, { influenza	2 months
{ consumption	2 days
Somers Town.	
M. 57, { influenza	6 weeks
{ erysipelas	10 days
EDMONTON; Hampstead.	
F. 54, { influenza	3 months
{ pneumonia	*
HACKNEY; South.	
F. 17 days, influenza	1 week
St. GILES-IN-THE-FIELDS; South.	
M. 62, influenza	14 days
F. 70, influenza	*
F. 65, influenza	*
North.	
M. 50, { influenza	2 months
{ typhus	*
HOLBORN; St. George the Martyr.	
M. 53, { asthma	— months
{ influenza	*
CLERKENWELL; St. James.	
M. 61, { influenza	10 weeks
{ bronchitis	*
{ interlobular pneumonia	2 months
M. 38, (inquest), congestion of the brain following influenza, which produced insanity and an attempt at suicide	*
F. 62, influenza	*
F. 1, influenza	14 days
St. LUKE; Finsbury.	
M. 79, influenza	2 months
EAST LONDON; Cripplegate.	
M. 3 months, influenza with bronchitis	4 days
WEST LONDON; South.	
M. 63, { influenza	6 weeks
{ brouchitis	3 days
CITY OF LONDON; North East.	
M. 62, { disease of heart	*
{ influenza	*
{ typhus	7 days
North West.	
F. 37, { chronic bronchitis	*
{ influenza	6 weeks
South.	
F. 63, influenza	*
South East.	
M. 71, { influenza	2 months
{ diseased lungs and dropsy	*
F. 80, { influenza	1 week
{ consequent debility.	
SHOREDITCH; Hoxton, Old Town.	
F. 64, influenza	6 days

Influenza (continued):—	duration
SHOREDITCH; Hillywell and Moorfields.	
M. 51, influenza—pneumonia	7 days
Haggerstone, West.	
M. 45, { influenza	4 days
{ bronchitis	2 years
M. 71, influenza	8 days
The Green.	
F. 70, influenza	*
WHITECHAPEL; Spitalfields.	
F. 61, influenza—bronchitis	14 days
Church.	
F. 59, { asthma	9 years
{ influenza	1 month
St. GEORGE-IN-THE-EAST; St. Paul.	
F. 8 months, influenza	10 days
STEPNEY; Mile End, Old Town (Lower).	
M. 64, { influenza	2 months
{ asthma; dropsy	10 days
St. SAVIOUR; St. Saviour.	
F. 34, { influenza	6 weeks
{ peritonitis	2 days after childbirth
Christ Church.	
F. 50, influenza	1 week
BERMONDSEY; The Leather Market.	
M. 8 weeks, { influenza	10 days
{ bronchitis	4 days
F. 4, { influenza	7 days
{ bronchitis	8 days
SOUTHWARK; London Road.	
M. 58, influenza—broncho-pneumonia	*
F. 71, influenza	*
F. 8 months, { influenza	1 week
{ hydrocephalus	2 weeks
F. 2, { influenza	2 weeks
{ hydrocephalus	1 week
LAMBETH; Lambeth Church (first part).	
M. 67, influenza	1 week
Kennington (second part).	
F. 71, influenza	8 days
Brixton.	
F. 68, influenza	3 or 4 weeks
natural decay.	
CAMBERWELL; Camberwell.	
F. 69, influenza—pneumonia—exhaustion ..	some weeks
St. George.	
F. 30, influenza—bronchitis	10 days
ROTHERHITHE; Rotherhithe.	
M. 79, influenza	5 weeks
GREENWICH; Woolwich Arsenal.	
M. 54, influenza	9 weeks
M. 42, pleurisy and influenza	8 days
East.	
F. 1, influenza	*
WANDSWORTH, &c.; Battersea.	
F. 73, influenza	3 weeks

NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending Feb. 5th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.

Syphilis:—	duration
M. 4 days, { debility	from birth
{ syphilis	*
In University College Hospital, M. 22, (post mort.), syphilis—sloughing bubo	
erysipelas and pneumonia	2 months
M. 6 weeks, imperfect development, resulting from secondary syphilis previous to birth.	6 days

Malformation:—	duration
F. 8 days, spina bifida	from birth
F. 16 mon., cyanosis	from birth
F. 7 weeks, cleft palate—debility arising from imperfect nourishment—no medical attendance.	
M. 10 mon., malformation of the heart	sudden

Hernia:—	duration
F. 46, strangulated hernia	2 days
M. 18, (post mort.), strangulated intestine, the consequence of internal entanglement ..	48 hours
F. 36, obturator hernia	13 days
In London Hospital, F. 50, hernia	4 years
strangulated femoral	2½ days
F. 4 days, congenital hernia into the umbilical cord of nearly all the intestines.	

Diabetes:—No deaths registered from this cause.

Stone:—	duration
In King's College hospital, M. 5 (p. m.), calculus in the bladder	4 years
lithotomy—peritonitis	1 week

Childbirth and Metria (or Puerperal Fever):—
The time elapsing from commencement of labour to death should invariably be returned.

F. 39, puerperal peritonitis	*
F. 25, uterine phlebitis—phlegmasia dolens ..	*
F. 24, puerperal fever	*
F. 33, childbirth	8 days
puerperal fever.	
F. 22, puerperal peritonitis	6 days, and ninth day after childbirth
F. 38, { childbirth	14 days
{ puerperal fever	5 days
F. 27, { childbirth	5 days
{ puerperal peritonitis	3 days
F. 38, { childbirth	12 days
{ puerperal fever	10 days
F. 22, puerperal peritonitis	4 days
F. 19, puerperal fever	4 days
In St. Thomas' hospital, F. 25, sloughing sores after puerperal fever	4 months

Childbirth (continued):—	duration
F. 33, puerperal peritonitis	*
F. 24, labour—inflammation of peritoneum ..	3 days
F. 39, childbirth	32 hours
F. 20, childbirth	2 hours
F. 40, uterine hæmorrhage	24 hours
F. 21, { puerperal convulsions	21 hours
{ congestion of brain	*
F. 31 (inq.), natural death from puerperal convulsions	2 hours
Disease and Childbirth:—	
F. 32, { childbirth	15 days
{ phthisis	18 months
F. 31, { bronchitis	10 weeks
{ debilitas post partum	*
See Influenza.	

Delirium Tremens:—	duration
F. 42, pleurisy—delirium tremens	*
(assigned to pleurisy in abstract.)	
M. 42, delirium tremens	1 week
M. 45, delirium tremens	3 days

Intemperance:—	duration
F. 37 (inquest, post mort.), disease of liver brought on by excessive drinking of ardent spirits	about 3 weeks
M. 60 (inq.), apoplexy accelerated by drunkenness and exposure to cold—found dead on the floor of his room, where he had lain several hours	
Watchcase-maker about 53 (inq.), intoxication with spirituous liquors—was subject to fits ..	*
F. 40, consumption and effects of drink	*

Privation; Cold:—	duration
F. newly born (inquest), whether neglect and exposure to cold at the birth, or disease in the right lung not discoverable	*
In Saffron-hill sub-district, rag and bone picker, age not stated (inquest, p. m.), want of the common necessaries of life; not having applied for parochial relief.	

Want of Breast-milk and Inanition:—	duration
M. 30 hours, inanition	*
M. 11 days, inanition	*
F. 2 months, inanition	*
F. 5 months, atrophy and diarrhoea—never having had the breast	*

Purpura:—	duration
M. 71, purpura	*
M. 4 weeks, purpura	from birth
F. 56, { diseased liver	21 days
{ purpura	

Hæmorrhage;—Hæmatemesis:—	duration
F. prisoner in the House of Correction, Westminster (inquest, post mort.), about 45, natural from effusion of blood into the cavity of the chest	about 1 hour
M. 28, hæmatemesis	8 weeks

Miscellaneous Causes:—	duration
M. 20 (post mort., inq.), abscess at the base of the skull, producing inflammation of the right jugular vein	2 months
In Westminster hospital, M. 58, anthrax—erysipelas, typhoid	*
F. 76 (post mort.), chronic softening of the liver—fistulous communication between the integument and gall-bladder, which contained a stone	8 years
F. 33, exhaustion after the re-filling of an ovarian cyst	2 years
tapped twice	died 9 days after last tapping
two gallons of fluid were taken away—cyst re-filled 4 days after operation.	

M. 62, marasmus from great mental depression ..	*
In Dreadnought hospital, M. 26, (post mort.), headache and vertigo	7 weeks
erysipelas	18 days
double pneumonia	9 days
inflammation of larynx and trachea.	
In Dreadnought hospital, M. 39, (post mort.), pericarditis and pleurisy	14 weeks
complete adhesion of pericardium to the heart. extensive pleuritic adhesions, and empyema of left side.	

In Dreadnought hospital, M. 30 (p. m.), cough—diarrhoea	30 days
general peritonitis	3 days
extensive adhesion of peritoneum; intestines matted together; ulceration of large intestine (no perforation discovered).	

In Dreadnought hospital, M. 25, (post mort.), fever	2 months
diarrhoea	2 months
great congestion of both lungs; ulceration of large intestine.	

In Dreadnought hospital, M. 20, fever	*
diarrhoea	17 days
pneumonia	5 days
In Dreadnought hospital, M. 22 (post mort.), ascites	7 weeks
diarrhoea	16 days
erysipelas	15 days
tubercular peritonitis.	

In Dreadnought hospital, M. 39 (post mort.), ague	of some months
bronchitis	3 months
pericarditis	7 days
thick layer of lymph over the whole surface of pericardium—valves healthy.	

In Lambeth Church sub-district (2nd part), M. 8, typhus	5 days
inflamed cervical glands	5 days
M. 6, typhus	7 days

REGISTRAR'S NOTE.—The father of these two boys stated, that it was the opinion of the medical man, as well as his own, that the fever was engendered by the state of the premises. It appears there is a drain running through the house, which emits most unpleasant effluvia. The privy is full to overflowing, and has been so for some time, while the landlord will do nothing to remove the evil. The house is generally in a bad state. On the death of the children, the doctor ordered the remainder of the family, who were all ill, immediately to quit the house.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 14; apoplexy, 7; disease of the heart, 3; childbirth, 1; intemperance, 3; starvation and cold, 2; other specified causes, 29; "found dead," "natural death," "visitation of God," &c., 8—TOTAL, 67 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 49.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 12th February, 1848.

Day.	Phases	Mean height of the barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 35 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive, and tension strong throughout the day.	The sky was overcast throughout the day. The prevailing clouds were cirrostratus and scud.
MON.	Positive, and tension strong till 9h a.m. Nothing was shewn between this time and 3h. p.m. Positive, and tension weak afterwards till midnight.	The sky was overcast throughout the day. The prevailing clouds were cirrostratus and scud. Rain commenced falling soon after 4h. p.m. and continued till 9h. p.m.
TUES.	Nothing was shewn till near noon. Positive, and tension moderate from noon till midnight.	The sky was generally overcast throughout the day, except between 4h. a.m. and 6h. a.m., when it was about one third covered. The prevailing clouds were cirrostratus and scud. Thin rain was falling between 6h. p.m. and midnight.
WED.	Positive, and tension strong between noon and 3h. p.m. Nothing was shewn at other times.	The sky was overcast at 6h. a.m., and at noon; at other times during the day about three-fourths were covered. Cirrostratus and scud were the prevailing clouds. A gale of wind occurred; from noon till 3h. p.m. it blew with a constant pressure of 5lbs. on the square foot with frequent gusts to 10lbs., 11lbs., and 12lbs. At 4h. 20m. p.m. the pressure was 10lb.
THURS.	Nothing was shewn till 3h. p.m., when it was positive, with weak tension. At 6h. p.m. negative and very active, and positive with moderate tension afterwards.	The sky was nearly free from cloud till 3h. p.m., and overcast during the remainder of the day. Rain began to fall at 4h. p.m., and continued falling heavily till midnight. The reading of the barometer on February 7, at 9h. a.m. was 29.708 in., after this time the readings decreased, till it attained its minimum reading, 29.598 in., on Feb. 10d., at midnight.
FRID.	Nothing was shewn till near noon. Positive, and tension variable afterwards.	The sky was overcast till 6h. a.m.; from this time till 4h. p.m. the amount of cloud was small, and the sky was overcast; afterwards the prevailing clouds were cirrostratus and scud. Rain was falling from 6h. a.m. till 4h. a.m.
SAT.	Positive, and tension moderate at 6h. a.m., 9h. a.m., and at 6h. p.m. At other examinations nothing was shewn.	The sky was overcast till 9h. a.m. and very variable afterwards, it being occasionally about one-half covered, and at other times nearly clear, until near midnight, when it became again overcast. The prevailing clouds were cirrostratus and scud.

The height of the column of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and - "lower;" than the average. The departures from the average have been variable this week, and at the end of the week they were very large in excess.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the main-mast, and read each day at 6h. 30m. a.m., was 42.2; and the mean reading at 7h. 30m. p.m. was 45.6; the mean readings at the Royal Observatory for the same times were 42.4 and 45.7 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING FEBRUARY 12, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, February 6d, the temperature of the air increased from 50° early in the morning to 55.1 by 1h. p.m.; it decreased to 52° by 10h. p.m., and to 46.5 by midnight. On Monday it increased to 53° by 3h. p.m., and decreased to 45° by midnight. On Tuesday, at 6h. a.m., the temperature of the air was 41°; it increased to 51° by 1h. p.m., and decreased to 47° by midnight. On Wednesday, February 9, the temperature of the air increased from 48° at 8h. a.m., to 52° by 1h. p.m.; and it was 40° at midnight. From the morning of the 4th till this time, the reading of the thermometer was always higher than 40°; the temperature of the air between these times was greatly above the average value for the season. On Thursday, at 8h. a.m., the temperature of the air was 38.5; this increased to 49° by 3h. p.m., and decreased to 40° by midnight. On Friday, at 8h. a.m., it was 36.8; at 3h. p.m. it was 45.5, and decreased to 36.3 by midnight. On Saturday the lowest reading for the day took place at 8h. a.m., and it was 35.1; it then increased to 47° by 2h. p.m.; decreased to 43° at 9h. p.m.; and after this time it increased to 46.5 by midnight.

The changes in the readings of the barometer this week have been considerable. The highest this month took place on the 3rd of February at about noon, and it was 30.42 in., at the height of 40 feet above the level of the sea; it then began to decrease, and during the 4th was nearly stationary all day, the usual diurnal change did not take place; during the 5th and 6th the changes were small, on the 7th the reading decreased all day, and at midnight was 29.85 in., the decrease continued throughout the 8th, and the reading at midnight was 29.58 in., the decrease during the 9th was considerable, and the reading at midnight was 29.05 in., the decrease during the 10th was almost the same in amount as on the preceding day, and at midnight the reading was 28.75 in.; this reading is 1.67 in. less than that on the 3rd. During the 11th day the increase in the readings was very rapid, and at midnight the reading was 29.67 in., being nearly an inch greater than it was 24 hours previously—the increase still continued, though at a less rapid rate on the 12th, and at midnight the reading was 29.94 in. These readings are all corrected and reduced to the temperature of 32°.

The mass of air moved from the S. and the S.W. with considerable rapidity during the 6th, 7th, and 8th. At midnight on the 8th the direction was S., and the wind began to blow strongly, increasing to a gale, which continued throughout the 9th day; the gale was strongest during the early afternoon hours of this day, and it moderated at night, but it continued to blow strongly till about noon on the 10th; shortly after this time the direction changed from S.W. to S.E., then it veered to the N., and during the 11th the direction of the wind was N.N.W. till towards midnight it changed to the W.S.W., about which point it continued till the end of the week.

The average temperature of the air was as follows:—
Sunday, 50.5; Monday, 50.5; Tuesday, 46.0; Wednesday, 46.0; Thursday, 43.5; Friday, 40.9; and Saturday, 41.3.
The difference of temperature during each day was as follows:—
Sunday, 9.1; Monday, 5.0; Tuesday, 10.0; Wednesday, 12.0; Thursday, 11.0; Friday, 7.2; and Saturday, 12.4.
The average temperature of the Dew Point for each day was—
Sunday, 50.0; Monday, 46.9; Tuesday, 42.7; Wednesday, 40.3; Thursday, 38.3; Friday, 34.9; and Saturday, 34.9.
The average amount of water mixed with a cubic foot of air was as follows:—
Sunday, 4.3gr.; Monday, 3.8gr.; Tuesday, 3.3gr.; Wednesday, 3.1gr.; Thursday, 2.9gr.; Friday, 2.6gr.; and Saturday, 2.6gr.
The following Table shews the comparative Meteorology since the year 1841.

Week ending February 12.	In the Years,							Excess or Deficiency in the week ending February 12, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	43.4	35.1	34.6	27.4	37.2	28.6	45.5	+ 2.1	+ 10.4	+ 10.9	+ 18.1	+ 8.3	+ 16.9	+ 11.1
Temperature of the Dew Point	41.8	33.2	32.2	23.3	32.4	24.9	41.1	- 0.7	+ 7.9	+ 8.9	+ 17.8	+ 8.7	+ 16.2	+ 9.8
Mean Amount of Water in a Cubic Foot of Air	gr. 3.3	gr. 2.5	gr. 2.4	gr. 1.8	gr. 2.4	gr. 1.8	gr. 3.2	- 0.1	+ 0.7	+ 0.8	+ 1.4	+ 0.8	+ 1.4	+ 0.8

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, February 12, was 2.1 above the temperature of the corresponding week of 1842.
Errata in the Report last week.—The average temperature of the air, Sunday, for 38.0, read 43.0; and Monday, for 34.5, read 37.3.

Births and Deaths registered in London

During the Week ending Saturday, February 19th, 1848.

ANNUAL SERIES X.]

* The age of one person whose death is ascribed to pneumonia is not stated. Eight causes of death in the sub-district of Mile-end New Town, were received too late for insertion in the table. They are placed to causes not specified.

† The return for the sub-district of Whitechapel North has not been received this week. An average (12 males and 9 females) has been added instead thereof.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 6.

(The tabular abstract on the first page is for the week ending Saturday, Feb. 19. The following selection of cases is made from the Returns for the week ending Feb. 12th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words “no inquest.”

Fractures and Contusions :—	duration	Fractures and Contusions (continued)	duration	Drowning (continued) :—	duration
Smith, 83, fractured rib, and concussion to the nervous system, from having accidentally fallen into a cellar	*	In Guy's Hospital, F. 23 (no inq., post mort.), pelvic and lumbar abscess	5 months	Seaman, about 20, found dead in the River Thames—no marks of violence—no proof how he came into the river.	
Widow of a farmer, 91, fracture of the skull by falling out of a window to the ground accidentally	instant	Wounds :—		Hanging and Suffocation :—	
M. 84 (no inq.) fractured ribs	6 months	Woolstapler, 41, suicide by cutting his throat with a razor, in a state of mental derangement	*	Baker, 48, suicide by suspension with a neckerchief from the rail of a bedstead (from intemperate habits), suspended 15 minutes.	
Assistant nurse in Lambeth Workhouse, 60 (p.m.), compression of the brain from a blow—manslaughter against Maria Connell	3 hours	M. pauper, 79, mortification from a cut wound of the right hand, resulting from an accidental fall in the public street	1 month	Two men, 38 and 43, accidental death from mephitic air inhaled in a brewing vat.	
F. 77 (no inquest), fractured neck of the thigh bone, and natural decay	*	Drowning :—		M. 3 days (no inquest), premature birth (at 7 mon.), died suddenly from turning on its face.	
Query—How caused?		F. 23, found dead in the River Lea, without marks of violence; apparently drowned.		Poison :—	
		M. supposed 40 (person unknown), drowned in the River Thames—no marks of violence—no proof how he came into the water (in water 3 weeks).		Wife of an attorney, 40, arsenic—in suicide; not proved to be insane	*

Small Pox:—

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

M. 18, small pox	10 days
vaccinated at the age of 1 year.	
M. 2, confluent small pox (not vaccinated)	8 days
M. 2, variola (not vaccinated)	3 weeks
M. 5, small pox	14 days
vaccinated at the age of 8 months.	
In Small Pox Hospital, M. 31, small pox confluent (unprotected)	15 days
From Hoxton.	
In Small Pox Hospital, M. 36, small pox, confluent (unprotected)	26 days
From Whitechapel.	
F. 19, small pox, confluent, said to have been vaccinated young at the Small Pox Hospital, London (no cicatrix)	9 days
F. 26, small pox	6 days
vaccinated.	
died 5 days after childbirth.	
M. 1, small pox (not vaccinated)	10 days
M. 2, small pox (not vaccinated)	*
M. 1, { variola	7 days
{ pneumonia	5 days
vaccinated at 2 months.	
F. 8 months, small pox (not vaccinated)	9 days
M. 3, variola conflens (not vaccinated)	12 days
F. 4 mons., small pox (natural—not vaccinated) 7 days	
M. 3, small pox	1 week
first attack—not vaccinated—no medical attendant.	
F. 6, variola	15 days
first attack; vaccinated with effect about 6 years ago.	
F. 2, small pox (vaccination imperfect)	*
M. 1, small pox (first attack—not vaccinated)	*
M. 1, small pox (first attack—not vaccinated)	*
F. 2, small pox (first attack—not vaccinated)	*
F. 4 months, small pox (first attack—not vaccinated)	*
F. 9 months, small pox (first attack—not vaccinated)	*
M. 18, confluent small pox	*
M. 9, small pox, confluent	12 days
uncertain whether vaccinated.	
M. 1, confluent small pox (not vaccinated)	*
M. 1, small pox	10 days
F. 11, confluent small pox	*
F. 2, small pox (not vaccinated)	7 days
M. 6 months, small pox	6 days
first attack—not vaccinated.	
F. 3, small pox	10 days
first attack—not vaccinated.	
M. 23, confluent small pox	17 days
first attack—not vaccinated.	
M. 21, small pox	*
F. 5, confluent small pox	10 days

Influenza:—

PADDINGTON; St. John.
F. 66, influenza and bronchitis..... *

KENSINGTON; Fulham.
F. 67, { influenza 3 weeks
 { mania *

— Brompton.
F. 10 months, influenza and teething..... 14 days
ST. MARTIN-IN-THE-FIELDS; Charing Cross.
F. 50, { influenza—bronchitis *
 { In Workhouse 1 day

— Long Acre.
M. 59, { occasional spasmodic asthma some years
 { influenza—spasm of heart *

ST. JAMES', WESTMINSTER; Berwick Street.
F. 80, influenza *

ST. MARYLEBONE; All Souls.
F. 70, influenza *

— Christ Church.
F. 70, { chronic bronchitis..... many years
 { influenza 3 months

ST. PANCRAS; Tottenham.
F. 72, { influenza *
 { atrophy 9 weeks

F. 8 months, influenza; congestion and inflammation of the lungs *

— Gray's Inn Lane.
F. 70, { asthma many years
 { influenza 3 months

F. 31, { diseased liver 1 year
 { influenza 1 month

— The Regent's Park.
M. 23, { influenza 14 days
 { with epistaxis producing anemia *

F. 68, influenza 4 days
F. 60, { bronchitis 6 or 7 years
 { influenza 1 month

EDMONTON; Hampstead.
F. 5, influenza—bronchitis *

HACKNEY; West.
F. 80, influenza 13 weeks
 natural decay from old age.

ST. GILES-IN-THE-FIELDS; South.
F. 35, influenza—inflammation of lungs..... 16 days

STRAND; St. Clement Danes.
M. 10, { influenza *
 { peritonitis 3 weeks

Influenza (continued) :—

HOLBORN; St. Andrew, East.	
F. 75, old age— <i>influenza</i>	*
CLERKENWELL; Pentonville.	
F. 2, { <i>influenza</i>	2 months
{ <i>pneumonia</i>	probably 5 days
ST. LUKE; Finchbury.	
F. 75, <i>influenza</i>	3 days
— Whitecross Street.	
M. 73, <i>influenza</i>	6 days
F. 40, { <i>influenza</i>	14 days
{ <i>peritonitis</i>	3 days
— City Road.	
F. 10 months, { <i>influenza</i>	2 months
{ <i>bronchitis</i>	1 week
EAST LONDON; Cripplegate.	
F. 32, { <i>phthisis</i>	4 months
{ <i>influenza</i>	5 weeks
WEST LONDON; North.	
In St. Bartholomew's Hospital, M. 30, <i>influenza</i> — <i>bronchitis</i>	*
CITY OF LONDON; South West.	
M. 43, <i>influenza</i>	*
— South.	
F. 65, <i>influenza</i>	1 month
— South East.	
M. 65, <i>influenza</i>	21 days
SHOREDITCH; St. Leonard's.	
F. 44, { <i>influenza</i>	2 months
{ <i>pneumonia</i> ; <i>bronchitis</i>	48 hours
WHITECHAPEL; North.	
F. 2, <i>phthisis</i> after <i>influenza</i>	*
— Aldgate.	
F. 5 months, { <i>influenza</i>	14 days
{ <i>erysipelas</i>	7 days
ST. GEORGE-IN-THE-EAST; St. John.	
F. 50, { <i>influenza</i>	28 days
{ <i>typhus</i>	14 days
STEPNEY; Limehouse.	
F. 4 weeks, <i>influenza</i>	*
ST. SAVIOUR; Christ Church.	
M. 25, <i>influenza</i> ; fever	*
M. 43, <i>influenza</i>	2 weeks
F. 60, paralysis; <i>influenza</i>	*
ST. MARY, NEWINGTON; Walworth.	
M. 9 months, <i>influenza</i> and chronic <i>bronchitis</i>	several days
acute <i>bronchitis</i> and <i>pneumonia</i>	2 days
LAMBETH; Church (first part).	
M. 76, <i>influenza</i>	14 days
F. 88, <i>influenza</i>	*
— Church (second part).	
F. 72, <i>influenza</i> — <i>bronchitis</i>	1 week
F. 10 weeks, <i>influenza</i>	3 days
— Kennington (first part).	
F. 5 months, <i>influenza</i>	10 days
CAMBERWELL; Camberwell.	
M. 87, <i>influenza</i> ; <i>pneumonia</i> ; exhaustion ..	a few days
GREENWICH; West.	
F. 52, { chronic <i>asthma</i>	— years
{ <i>influenza</i>	14 days
LEWISHAM; Plumstead and Charlton.	
F. 57, <i>influenza</i>	*
NOTE.—In making the abstract of causes of death the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of <i>influenza</i> , returned in the week ending Feb. 12th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.	
<i>Syphilis</i> :—	
F. 1 mon., <i>tubercle syphilitica</i>	*
In Dreadnought Hospital, M. 20, <i>bubo</i>	10 weeks
<i>erysipelas</i> of groin	6 days
In St. Bartholomew's Hospital, M. 23 <i>sloughing</i> and <i>ulceration</i> of mouth.	
<i>Malformation</i> :—	
M. 1 day, <i>malformation</i>	*
M. 10 days, (<i>p.m.</i>) <i>rectum imperforatum</i> .	
F. 2 mon., <i>spina bifida</i> .	
F. 60 hours, (<i>p.m.</i>) <i>imperforate anus</i> —operation ..	*
M. 4 mon., <i>harelip</i> — <i>marasmus</i>	from birth
M. 22 hours, weakly born, presenting the usual appearance of <i>malformation</i> of the heart.	
M. 23, <i>hypertrophy</i> — <i>dilatation</i> of right ventricle of heart	from infancy
<i>patulous foramen ovale</i> ?	
<i>thorax deformed</i> — <i>bronchorrhoea</i> .	
<i>albuminuria</i>	8 days
<i>anasarca</i>	8 days
M. 7 days, <i>malformation</i> of bowels.	
<i>Hernia</i> :—	
F. 47, (<i>p.m.</i>) <i>twisting</i> of the small intestines— <i>strangulation</i> of <i>ilium</i>	*
M. 3 mon { <i>hernia</i> , <i>inguinal</i>	congenital
{ <i>bronchitis</i> , with <i>cerebral irritation</i> ..	1 week
M. 73, <i>paralysis</i> — <i>strangulated hernia</i>	5 months
<i>Diabetes</i> :—	
In St. George's Hospital, M. 18, (<i>p.m.</i>) <i>diabetes mellitus</i> — <i>secondary inflammation</i> of the lungs and left kidney— <i>pleurisy</i> and <i>pericarditis</i>	about 8 or 10 days
In King's College Hospital, M. 20, (<i>p.m.</i>) <i>diabetes</i>	1 year
<i>phthisis</i>	2 weeks

Stone:—

In Guy's Hospital, M. 20, (*p. m.*) operation for stone in bladder 1 month
phlebitis *

Childbirth and Metria (or Puerperal Fever) :—
The time elapsing from commencement of labour to death should invariably be returned.

F. 26, puerperal peritonitis 6 days
F. 23, puerperal peritonitis 11 days
F. 39, { hysteritis *
 { puerperal peritonitis 21 days
 following childbirth.
F. 34, { childbirth 8 days
 { puerperal peritonitis 7 days
F. 37, puerperal fever 3 days
F. 27, puerperal peritonitis 4 days
F. 35, puerperal fever 9 days
F. 20, puerperal fever 2 days
 { puerperal fever *
F. 24, { convulsions 3 hours
 { puerperal peritonitis 6 days
F. 23, puerperal fever 5 days
F. 32, puerperal mania—cerebral congestion. *

F. 36, hæmorrhage in giving birth to a seven-months' child, which was still-born *

F. 24, childbirth 2 days
F. 34, (*ing.*) natural death from puerperal convulsions. sudden the day after delivery
F. 36, childbirth 10 days
F. 42, premature labour 7 days

Disease and Childbirth :—
F. 33, ulceration of lungs proving fatal 6 weeks after parturition

F. 30, syncope during premature labour arising from disease of the heart 1 year
F. 26, cynanche tonsillaris 8 days
erysipelas of head and face 5 days
peritonitis 5 days
the Registrar adds, "childbirth" 4 days

Uterine Insanity :—
F. 53, uterine insanity — years

Delirium Tremens :—
M. 36, delirium tremens 8 days
M. 34, delirium tremens 3 days
M. 56, delirium tremens *
M. 47, { delirium tremens 3 days
 { chronic bronchitis 3 years
M. 55, delirium tremens 6 days
M. 37, { delirium tremens 15 days
 { cerebral congestion 3 days
M. 56, delirium tremens *

Other Cases of Delirium Tremens :—
{ diseased liver *
M. 40, { dropsy — years
 { delirium tremens *
 { typhoid fever 7 days
M. 36, { epileptic convulsions 7 days
 { delirium tremens *

Intemperance :—No deaths registered from this cause.

Privation :—
F. 39, marasmus from poverty; and irregular life *

Want of Breast-milk: Inanition :—
M. 12 weeks, { atrophy *
 { no breast-milk 7 weeks
died suddenly.
M. 14 weeks, atrophy from want of breast-milk *
M. 3 months, exhaustion from want of breast-milk *
F. 4 months, atrophy from weaning 2 months
F. 3 months, want of the breast.
M. 7 days, inanition 7 days
F. 3 days, inanition *
M. 5 days, inanition—premature birth *

Purpura :—No deaths registered from this cause.

Hæmorrhage, Hæmatemesis, &c. :—
M. 39, { hæmorrhage from the bowels *
 { melæna 18 months

Miscellaneous Causes :—
In Charing Cross Hospital, M. 54 (*p. m.*), chronic ulcer of the stomach, supposed for 2 or more years
peritonitis a few hours
effusion of serum mixed with contents of stomach into the abdomen.
In Charing Cross Hospital, M. 39 (*p. m.*), hypertrophy of the heart long standing
morbus Brightii *
pneumonia a few hours
M. 54, fever—extravasation of urine from rupture of urethra. *

How produced ?
M. 3, malignant disease from miasma 12 hours
In Dreadnought Hospital, M. 20, (*p. m.*), intermittent fever with erysipelas 3½ months
hypertrophy and engorgement of liver and spleen *
In Dreadnought Hospital, M. 33, erysipelas of left groin and adjacent parts 6 days
In Dreadnought Hospital, M. 35, (*p. m.*), bronchitis 26 days
diarrhœa 12 days
consolidation of lower lobe of left lung—congestion of large intestine—collections of pus in recto-vesical pouch.
M. 59, phthisis after the loss of an arm, which was amputated in May last *
M. 1 month, hydrocele 3 weeks
general debility.
In Norwood, F. 15, (*p. m.*), bilious cholera 3 days

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 13; apoplexy, 1; disease of the heart, 3; childbirth, 1; other specified causes, 7; "found dead," "visitation of God," "natural," &c., 12—TOTAL, 37 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 34.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 19th February, 1848.

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive, and tension moderate, except at 4h. p.m., when nothing was shewn.	The sky was overcast throughout the day; cirrostratus and scud.
MON.	Positive, and tension strong at 6h. a.m. Nothing was shewn at any other time.	The sky was overcast throughout the day, with cirrostratus and scud. A misty rain was falling at intervals during the afternoon and evening.
TUES.	Negative, and very active at 6h. p.m. This was the only time electricity was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling frequently during the day. A lunar halo whose radius was 23° was frequently visible during the evening.
WED.	Positive, and tension variable throughout the day, except at 6h. a.m. when nothing was shewn.	The sky was generally about one-half covered throughout the day, excepting the period between 9h. a.m. and noon, when it was cloudless; the prevailing clouds were cirrostratus and scud. A lunar halo whose radius was 23° was visible at 6h. p.m. and at midnight.
THURS.	Positive, and very active throughout the day.	The sky was about three-fourths covered with cumuli, cumulostrati, cirrostratus and scud throughout the day. Near midnight the moon was surrounded by a corona exhibiting the prismatic colours very vividly.
FRID.	Positive, and tension strong throughout the day.	The sky was overcast till 5h. p.m. with cirrostratus and scud, light cirri and white fleecy clouds constantly varying in amount from this time till midnight, but at no time of sufficient density to obscure the moon and principal stars. At 9h. a.m. the reading of the barometer was 30.333 in.; after this time its reading decreased.
SAT.	Nothing was shewn at any examination.	The sky was overcast till 2h. p.m., about one-half covered till 5h. p.m., generally clear till 6h. p.m., and overcast afterwards. The prevailing clouds were cirrostratus and scud. Soon after 2h. a.m. snow began falling, and at 6h. a.m. the ground was partially covered by it to the depth of half an inch, but it had disappeared before 10h. a.m. A misty rain was falling frequently between 8h. a.m. and noon. The reading of the barometer decreased rapidly, and at midnight the reading was 29.417 in.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average. The departures from the average have been variable this week, and at the end of the week they were very large in excess.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the main-mast, and read each day at 6h. 30m. a.m., was 40.0; and the mean reading at 7h. 30m. p.m. was 41.6; the mean readings at the Royal Observatory for the same times were 39.4 and 41.3 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING FEBRUARY 19, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, February 13, the temperature of the air increased from 46.0 early in the morning to 50.5 by 2h. p.m., and remained at this value with very slight exceptions till midnight. Between 8h. a.m. and midnight on this day the extreme difference was 2° only. On Monday the extreme temperatures of the air were 49.5 and 53.5, occurring early in the morning, and at 2h. p.m. respectively; the length of time the maximum temperature continued was of short duration. On Tuesday the temperature of the air was about 49° till 10h. a.m.; at noon it was 46°; at 1h. p.m. it was 47°, and it continued at this value till nearly 5h. p.m.; the clouds at this time became broken, and the value at 6h. p.m. was 44°; this decreased as the sky became less clouded, and at midnight, it was 38°. On Wednesday the temperature early in the morning was as low as 30.5; this value increased to 43° by 3h. p.m., and decreased to 39° by midnight. On Thursday the temperature early in the morning was 30°; at 2h. p.m. the highest value for the day took place, and it was 43.5; this value decreased to 32° by midnight. On Friday the temperature increased to 41° by 11h. a.m.; it then began to diminish, and at 7h. 30m. p.m. it was 27.5, the lowest point during the week; after this time it increased slowly, and at midnight was 31°. On Saturday the temperature increased from the preceding midnight till 3h. p.m.; at this time it was 48°; this value decreased to 41° by 9h. p.m., and increased to 42° by midnight.

The changes in the readings of the barometer, though less in amount than in the preceding week, have been considerable. On Sunday the readings increased slightly till noon, and decreased after noon; at midnight the reading was 29.96 in. During Monday the readings decreased all day, and at midnight the reading was 29.69 in.; the readings continued to decrease, but at a less rapid rate, till about noon on Tuesday, and after this time the oscillations were irregular; at midnight the reading was 29.58 in. On Wednesday the readings increased rapidly and steadily; at midnight the reading was 30.10 in.; the increase continued, though with less rapidity, during Thursday; at midnight on this day the reading was 30.48 in., and the increase continued till Friday, February 18d, at 9h. a.m., at which time the reading was 30.48 in., being the highest reading this month,—this reading is 1.73 in. greater than that on the 10th day at midnight, and it is nearly an inch greater than it was on the 15th at 3h. p.m. The interval of time at which this high reading continued was very short, and at midnight the reading was 30.13 in. During Saturday the decrease in the readings exceeded half an inch, and at midnight the reading was 29.60 in.; this quick decrease continued till 11h. a.m. on Sunday, at which time it was 29.23 in. These readings are all corrected and reduced to the temperature of 32°. The height of the eastern of the barometer 40 feet above the level of the sea.

The average temperature of the air for each day was as follows:—
Sunday, 48.1; Monday, 51.5; Tuesday, 43.6; Wednesday, 36.7; Thursday, 36.7; Friday, 34.3; and Saturday, 38.8.

The difference of temperature during each day was as follows:—
Sunday, 4.2; Monday, 4.0; Tuesday, 11.3; Wednesday, 12.5; Thursday, 13.5; Friday, 13.5; and Saturday, 18.4.

The difference of temperature during the week was 20°.

The average temperature of the Dew Point for each day was—
Sunday, 45.5; Monday, 47.9; Tuesday, 40.8; Wednesday, 32.1; Thursday, 30.8; Friday, 29.2; and Saturday, 35.2.

The average amount of water mixed with a cubic foot of air was as follows:—
Sunday, 3.7 gr.; Monday, 3.9 gr.; Tuesday, 3.1 gr.; Wednesday, 2.4 gr.; Thursday, 2.3 gr.; Friday, 2.2 gr.; and Saturday, 2.5 gr.

At times during the 16th, 17th, and 18th, the temperature of the air exceeded that of the dew point by quantities varying from 7° to 14°.

The following Table shews the comparative Meteorology since the year 1841.

Week ending February 19.	In the Years,							Excess or Deficiency in the week ending February 19, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	40.0	29.4	36.5	33.2	42.4	42.6	41.4	+ 1.4	+ 12.0	+ 4.9	+ 8.2	— 1.0	— 1.2	+ 4.0
Temperature of the Dew Point	37.4	25.4	33.8	28.8	38.2	38.3	37.4	0.0	+ 11.9	+ 3.6	+ 8.6	— 0.8	— 0.9	+ 3.7
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	2.8	1.9	2.5	2.1	2.8	2.8	2.9	+ 0.1	+ 1.0	+ 0.4	+ 0.8	+ 0.1	+ 0.1	+ 0.4

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, February 19, was 1.4 above the temperature of the corresponding week of 1842.

Births and Deaths registered in London

During the Week ending Saturday, February 26th, 1848.

no medical attendant.			3 weeks	{ peritonitis	12 hours
M. 14 weeks, small pox	13 days	St. GILES; South.		F. 20, (ing.), natural; peritonitis after parturition	6 days
vaccination attempted without success.		M. 2, influenza	3 weeks	(the patient being under the care of an ill-informed midwife of a public charity.	
F. 9, small pox, confluent	12 days	— St. George.		F. 20, lying-in-fever	3 days
not vaccinated.		F. 71, influenza	10 weeks	F. 22, puerperal fever	*
M. 6, small pox (not vaccinated)	5 days	HOLBORN; St. George the Martyr.		F. 29, puerperal peritonitis	4 days
F. 4, { small pox (not vaccinated)	16 days	M. 56, influenza	6 weeks	commencing in uterine inflammation on 7th day after confinement.	
{ pneumonia	5 days	CLERKENWELL; Pentonville.		F. 25, exhaustion from excitement after accouchment	1 week
M. 3, small pox (not vaccinated)	11 days	F. 1 month, influenza; convulsions	1 week	F. 38, uterine hæmorrhage after bearing twins 2 hours	
M. 4, small pox	7 days	— St. James.		F. 39, exhaustion after parturition	7 hours
vaccinated at 3 months old without effect.		{ valvular disease of the heart.	some years	Disease, and Childbirth supervening:—	
In Small Pox Hospital, M. 31, small pox, confluent (modified)	20 days	F. 64, { bronchitis and influenza	2 months	F. 45, { consumption	*
followed by diarrhoea and Hospital fever.	7 days	{ icterus	*	{ exhaustion after premature labour.	*
vaccinated young at Dursley (one superficial cicatrix).		St. LUKE; Whitecross Street.		F. 29, phthisis	1 year
In Small Pox Hospital, M. 23, small pox, confluent, unmodified	10 days	F. 49, { influenza	4 days	sank 14 days after delivery of a male child.	
said to have been vaccinated when young at Cremona—no cicatrix.		{ bilious fever	3 days	Delirium Tremens:—	
In Small Pox Hospital, F. 3, small pox, confluent (unprotected)	13 days	CITY OF LONDON; North East.		M. 39, delirium tremens	9 days
M. 10 days, small pox (not vaccinated)	3 days	F. 67, influenza	3 weeks	F. 33, delirium tremens	1 month
M. 2, small pox	10 days	— South East.		M. 44, delirium tremens	3 weeks
14 days after vaccination.		F. 60, influenza	10 days	Intemperance:—	
M. 2, small pox	7 days	SHOREDITCH; Holywell and Moorfields.		F. 27, (inquest), natural death—affection of the brain from habits of intemperance.	*
first attack—vaccinated 6 weeks ago, not known whether effectually.		M. 85, influenza	*	Privation:—	
F. 32, modified small pox	12 days	STERNY; Limehouse.		F. 4, { debility from want of proper food.	2 months
first attack—vaccinated with effect about 22 years ago, in Oxfordshire.		F. 2 months, epidemic catarrh.	4 days	{ diarrhoea	4 days
F. 7 months, confluent small pox	8 days	St. OLAVE; St. Olave and St. Thomas.		Fever and Low Diet:—	
F. 8, confluent small pox (natural)	11 days	F. 40, { influenza	4 weeks	Prisoner in the House of Correction, Westminster, son of a porter, 17, (ing., p. m.), continued fever accelerated by low diet, namely, bread and water.	41 days
M. 5, small pox	3 weeks	{ phthisis	*	Want of Breast-milk: Inanition:—	
vaccinated at the ages of 6 months and 3 years without effect.		SOUTHWARK; Kent Road.		M. 7 weeks, want of nourishment	*
M. under 1, small pox	14 days	F. 7, { influenza	8 days	F. 3 days, inanition	*
M. 1, small pox	3 weeks	{ pulmonary congestion.		F. 3 days, inanition	*
vaccinated with effect, when 5 months old.		NEWINGTON; St. Peter, Walworth.		Purpura; Scurvy:—	
M. 1, small pox	7 days	M. 60, influenza	*	In Royal Free Hospital, M. 36, scorbutus—pleurisy	*
M. 31, small pox (not vaccinated)	12 days	LAMBETH; Kennington (second part).		In Hospital 1 week.	
M. 1, small pox (natural)	10 days	F. 11 months, { influenza	2 weeks	Hæmorrhage, Hæmatemesis, &c.:—	
vaccinated on the day previous to the eruption.		{ atrophy	3 weeks	M. 56, hæmatemesis—melaena.	*
M. 3 months, small pox (not vaccinated)	*	CAMBERWELL; Camberwell.		M. 45, (inquest), hæmorrhage from the lungs. . sudden	
M. 9, small pox, confluent (not vaccinated) ..	11 days	M. 4, { influenza	1 month	Pleurisy; Hæmorrhage:—	
F. 3, confluent small pox (not vaccinated) ..	1 week	{ convulsions	*	M. 36, { pleuritis	4 days
M. 1, small pox	10 days	GREENWICH; St. Paul's, Deptford.		{ fatal epistaxis	10 hours
vaccination attempted 14 months ago without effect.		F. 71, influenza	5 weeks	Miscellaneous Causes:—	
F. 3, pertussis—small pox	*	— East.		In St. George's Hospital, M. 37, (post mort.), old stricture	8 or 9 years
vaccinated with effect about 1 year ago.		M. 67, { gont	18 months	retention of urine, abscesses, fistula, secondary abscess.	
F. 11 days, small pox	*	{ pleurisy	10 months	M. 4 (post mort.), cancer of the left eye removed by operation	6 months ago
M. 16, small pox (after vaccination)	6 days	{ influenza	2 months ago	fungous disease of orbit and cheek; also of the brain	5 months
M. 3, small pox	10 days	WANDSWORTH, &c.; Clapham.		In University College Hospital, F. 38, morbus cordis	*
first attack—not vaccinated (no medical attendant).		M. 72, influenza terminating in hydrothorax. .	10 days	ascites	*
In Unité Hospital Ship, M. 21, small pox.	10 days	LEWISHAM; Lee.		cirrhotic of liver	*
first attack—not vaccinated.		F. 61, { influenza	10 days	Bright's disease	2 years
F. 23, small pox (not vaccinated)	10 days	{ humid asthma	several years	M. 75, cancer scroti (chimney sweepers') ulcerating into the groin, &c.	6 months
Influenza:—		NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending Feb. 19th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.		F. 25, legs and hip frost bitten and mortified. .	20 days
PADDINGTON; St. John.		Syphilis:—		The following cases occurred in the Dreadnought Hospital Ship:—	
F. 2 months, influenza	2 days	F. 15 hours, syphilis	from birth	M. 46 (p.m.), typhus	18 days
St. GEORGE; Hanover Square.		In Royal Free Hospital, F. 17, cachexia syphilitica	*	delirium	16 days
F. 52, { hydrothorax	some months	In Hospital 6 weeks.		effusion under the arachnoid, and into the ventricles; brain congested.	
{ influenza	3 weeks	F. 48, syphilis	*	M. 33 (p.m.), stricture of urethra	8 years
WESTMINSTER; St. John the Evangelist.		In St. Thomas' Hospital, F. 22, erysipelas after lues venerea	*	division of stricture	8 days
F. 77, { influenza	6 months	Malformation:—		erysipelas of perinaeum and adjacent parts, 5 days	
{ hypertrophy of heart	*	M. 20, morbus coeruleus	from birth	M. 19 (p.m.), acute bronchitis	5 weeks
St. MARLEBONE; St. Mary.		F. 6 hours, head imperfectly formed.		erysipelas	16 days
F. 63, { influenza	7 days	M. 5 days, anus imperforatus.		diarrhoea	8 days
{ debility and exhaustion	*	F. 9 days, imperforate rectum.		inflammation and softening of bronchial mucous membrane.	
— St. John.		F. 9 days, imperforate rectum (congenital).		M. 44 (p.m.), disease of left ankle joint	7 weeks
F. 36, { influenza	1 month	M. 14 days, spina bifida.		amputation below the knee	2 weeks
{ phthisis	of long standing	Hernia:—		phlebitis—empyema of left side—purulent deposits in left lung and spleen.	2 weeks
F. 64, { pneumonia	3 months	F. 53, { strangulated hernia	18 days		
{ influenza	20 days	{ operation on Jan. 31st.			
St. PANCRAS; Tottenham.		{ peritonitis—tyimpanitis	4 days		
F. 41, influenza	2 weeks	Diabetes; Stone:—			
— Kentish Town.		No deaths registered from either of these causes.			
F. 53, { influenza	2 weeks				
{ disease of the heart	of long standing				

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 1; rupture of a vessel in the lungs, 1; disease of heart, 2; childbirth, 1; intemperance 1; fever and low diet, 1; violence, 23; other specified causes, 11; "found dead," "natural death," "visitation of God," &c., 6—TOTAL, 47 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 51.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 26th February, 1848.

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Negative and active at noon. Positive, with strong tension, at 4h. p.m. At other examinations nothing was shewn.	The sky was generally overcast till 6h. p.m., and clear afterwards; cirrostratus and scud. A misty rain was falling at intervals during the morning and afternoon. An aurora at night, and the magnets were much disturbed.
MON.	Nothing was shewn at 6h. a.m. Positive and tension weak at 9h. a.m., and very strong during the remainder of the day.	The amount of cloud was variable till near noon, and overcast during the remainder of the day; cirrostratus and scud. Rain was falling during the afternoon and evening. The magnets were greatly disturbed during the whole day. The reading of the barometer was decreasing from 9h. a.m., and at midnight it was 29.451.
TUES.	Positive and tension strong till 6h. a.m. Nothing was shewn afterwards.	The sky was overcast till 7h. p.m., and generally clear afterwards; cirrostratus and scud. Rain was falling frequently during the morning and afternoon. Between 6h. and 8h. p.m. several streamers of an aurora were observed, and the magnets were disturbed. The reading of the bar- ometer decreased till 6h. p.m., and it was nearly stationary till midnight, at which time it was 28.996 in.
WED.	Positive and tension strong at 6h. p.m. Nothing was shewn at any other time.	The sky was about one-half covered throughout the day; cumuli, cumulostrati, and scud. The magnets were disturbed. The reading of the barometer decreased early in the morning, and increased afterwards; at midnight it was 29.229 in.
THURS.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Thin rain was falling during the afternoon, and several violent squalls of wind and rain occurred shortly before midnight. The reading of the barometer decreased all day; at midnight it was 28.964 in.
FRID.	Negative and very active at noon. Nothing was shewn at any other time.	Three-fourths of the sky were covered throughout the day. Cumuli, cumulostrati, and scud. Several squalls of wind and rain occurred during the morning, and heavy rain was falling between 10h. p.m. and midnight. The reading of the barometer decreased till 6h. a.m.; it was nearly sta- tionary from 6 a.m. till 3h. p.m.; it then increased till 6h. p.m., at which time its reading was 29.102 in., and after this it decreased rapidly, and at midnight it was 28.818 in.
SAT.	Nothing was shewn till noon. Between noon and 3h. p.m. strong nega- tive electricity was shewn, frequent sparks and galvanic currents. At every other examination positive with moderate tension till near midnight, when nothing was shewn.	The sky was with few exceptions overcast throughout the day; cirrostratus and scud. Frequent violent squalls of wind and rain occurred during the morning and afternoon. The reading of the barometer decreased very rapidly till 9h. 45m. a.m., at which time the minimum reading took place, being 28.299 in.; after this it increased till midnight, at which time it was 29.092 in.

The height of the cistern of the barometer is considered to be 139 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds standing over Greenwich is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average. The departures from the average have been variable this week, and at the end of the week they were very large in excess.

The temperature of the water of the Thames is ascertained by the use of a self-registering thermometer, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the masts, and read each day at 6h. 30m. a.m., was 42.6; and the mean reading at 7h. 30m. p.m. was 46.3; the mean readings at the Royal Observatory for the same times were 42.8 and 47.3 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING FEBRUARY 26, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, February 20, the temperature of the air increased from 40° at 7h. A.M. to 45° at 3h. P.M., and decreased to 34°.2 at midnight. On Monday, the temperature early in the morning was 30°, this value increased to 40°.2 by 2h. P.M.; decreased to 42°.8 by 4h. 30m. P.M., and between this time and midnight there was very little change; the reading at midnight was 42°.2. On Tuesday, the temperature increased to 52°.0 by 1h. P.M., it remained at this value till 2h. P.M., and then gradually decreased to 38° by midnight. On Wednesday, the temperature early in the morning was 37°.5 at 2h. P.M. it was 51°; at 4h. P.M. it was 50°; at 5h. P.M. it was 47°, and from this time till midnight it increased or decreased by 2° or 3° according as the sky was clear or cloudy. On Thursday, early in the morning, the temperature was 44°.5; at 1h. P.M. it was 55°; and at midnight it was 48°.5. On Friday, the temperature increased to 54° by 1h. 30m. A.M.; decreased to 45° by 8h. P.M., and increased to 47° by midnight. On Saturday, the temperature increased to 50° by 1h. A.M., it remained at this value till after noon, it then began to decrease, and at midnight was 44°.5.

The readings of the barometer this week have been very remarkable, and particularly so, having occurred so immediately after the great changes which have taken place in the two preceding weeks. On Sunday the reading increased from 29.23 in. at 1h. A.M. to 29.83 in. On Monday, at 9h. A.M., after this time a decrease commenced and continued till 9h. A.M. on the morning of Wednesday, at which time the reading was 29.05 in.; it then began to increase, and at midnight the reading was 29.38 in. On Thursday morning a decrease again had taken place, and continued till the morning of Friday at 9h. A.M., when the reading was 29.09 in., and this value continued almost without change till the evening, when the readings began to decrease rapidly. At midnight the reading had decreased to 28.97 in., and was still decreasing. On Saturday morning at 10h. A.M. the minimum reading took place, being 28.46 in.; this reading is somewhat lower than that on Tuesday, December 7, 1847, and as following it at so short an interval of time, is unprecedented. Usually several years pass between readings of so low a value. During the remainder of Saturday the reading increased, and at midnight it was 29.30 in., but after this time it again decreased, and remained very low during the whole of Sunday.

The week has been distinguished not only by the very low barometer readings, but also by two exhibitions of the aurora borealis, as well as the circumstance of a considerable darkness having prevailed at different times, and the weather having been squally and tempestuous.

The height of the cistern of the barometer is 40 feet above the level of the sea.

The average temperature of the air for each day was as follows:—
Sunday, 39°.6; Monday, 38°.1; Tuesday, 45°.0; Wednesday, 44°.2; Thursday, 49°.7; Friday, 49°.0; and Saturday, 47°.2.

The difference of temperature during each day was as follows:—
Sunday, 10°.8; Monday, 16°.2; Tuesday, 14°.0; Wednesday, 13°.3; Thursday, 10°.5; Friday, 9°.9; and Saturday, 5°.5.

The difference of temperature during the week was 25°.

The average temperature of the Dew Point for each day was—
Sunday, 36°.9; Monday, 37°.0; Tuesday, 43°.8; Wednesday, 38°.5; Thursday, 45°.6; Friday, 44°.4; and Saturday, 44°.3.

The average amount of water mixed with a cubic foot of air was as follows:—
Sunday, 2.8 gr.; Monday, 2.7 gr.; Tuesday, 3.5 gr.; Wednesday, 2.9 gr.; Thursday, 3.6 gr.; Friday, 3.3 gr.; and Saturday, 3.5 gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending February 26.	In the Years,							Excess or Deficiency in the week ending February 26, above or below that in the years*							Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847		
Temperature of the Air	40.5	39.9	35.4	34.6	49.7	38.0	44.7	+ 4.2	+ 4.8	+ 9.3	+ 10.1	— 5.0	+ 6.7		5.0
Temperature of the Dew Point	37.2	38.5	31.5	29.5	46.0	32.0	41.1	+ 3.4	+ 2.6	+ 9.6	+ 11.6	— 4.9	+ 9.1		6.0
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.		gr.
Mean Amount of Water in a Cubic Foot of Air	2.8	3.0	2.3	2.2	3.7	2.3	3.2	+ 0.4	+ 0.2	+ 0.9	+ 1.0	— 0.5	+ 0.9		0.5

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, February 26, was 4°.2 above the temperature of the corresponding week of 1842.

Births and Deaths registered in London

During the Week ending Saturday, March 4th, 1848.

DEATHS BY SMALL POX, INFLUENZA, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HEMORRHAGE, HEMATEMESIS, ETC.

Small Pox:—
 NOTE.—It should be stated in all cases whether vaccination had been performed with effect.
 M. 7, small pox *
 vaccination attempted without success.
 F. 2, small pox (not vaccinated) *
 M. 1, small pox (not vaccinated) 8 days
 F. 4, small pox (not vaccinated) 11 days
 M. 5, variola (natural) 5 weeks
 F. 1, variola (not vaccinated) 9 days
 In Small Pox Hospital, M. 10 months, small pox, confluent (unprotected) 10 days
 In Small Pox Hospital, M. 33, small pox, confluent (unprotected) 9 days
 cut 9 times for cow pox without effect.
 In Small Pox Hospital, M. 23, small pox, confluent (unprotected) 10 days
 In Small Pox Hospital, F. 8, small pox, confluent, malignant (unprotected) 5 days
 M. 8 months, small pox (not vaccinated) *
 M. 6 months, small pox (not vaccinated) *
 M. 56, small pox (vaccinated when an adult) *
 F. 1, small pox (vaccinated unsuccessfully) *
 F. 3, small pox (not vaccinated) *
 F. 7, small pox (not vaccinated) *
 F. 1, small pox (not vaccinated) 13 days
 M. 1, small pox *
 M. 11, small pox 11 days
 vaccinated, but probably without effect.
 M. 1, small pox (not vaccinated) 2 weeks
 F. 10 months, small pox (not vaccinated) 10 days
 no medical attendant.
 M. 1, small pox *
 first attack—vaccinated without effect.
 F. 6 months, small pox 9 days
 hydrocephalus 9 days
 vaccinated 6 days before the eruption appeared.
 M. 20, small pox, confluent (not vaccinated) 7 days
 F. 6 months, small pox (not vaccinated) 9 days
 F. 1, confluent small pox (not vaccinated) 14 days
 F. 9, small pox 3 days
 unsuccessfully vaccinated when an infant.
 F. 1, small pox 7 days
 first attack—not vaccinated.
 F. 17, small pox 9 days
 first attack—vaccinated with effect in infancy.
 F. 1, small pox 9 days
 first attack—not vaccinated.

Influenza:—
 PADDINGTON; St. Mary.
 M. 35, influenza 4 or 5 weeks
 inflammation of liver, and general disease of abdominal viscera, stomach, kidneys, &c. &c. 6 weeks
 KENSINGTON; St. Paul's, Hammersmith.
 F. 12, chronic disease of heart 4 or 5 years
 dropsy 7 months
 influenza with chronic bronchitis *
 — St. Peter, Hammersmith.
 M. 3 months, influenza 1 week
 CHELSEA; South.
 M. 62, diseased liver years
 influenza 8 weeks
 WESTMINSTER; St. Margaret.
 F. 1, influenza 2 weeks
 ST. MARTIN-IN-THE-FIELDS; Long Acre.
 M. 57, influenza—pleurisy 7 days
 ST. JAMES', WESTMINSTER; Berwick Street.
 M. 1 month, influenza 4 days
 F. 1, influenza 6 days
 — Golden Square.
 F. 53, influenza 7 weeks
 jaundice 10 days
 cerebral congestion 5 days
 ST. MARLYBONE; St. Mary.
 F. 38, influenza 10 days
 rheumatic fever—arthritic inflammation 4 days
 peritoneal inflammation 4 days
 F. 52, influenza—bronchitis *
 — St. John.
 M. 1, influenza—bronchitis—diarrhoea 9 days
 ST. PANCRAS; Tottenham.
 F. 84, influenza 3 weeks
 F. 35, influenza *
 — Gray's Inn Lane.
 F. 53, influenza 4 months
 dropsy 2 months
 — Somers Town.
 M. 70, influenza 2 months
 pneumonia (typhoid) 10 days
 M. 9 months, influenza 14 days
 pneumonia 10 days

Influenza (continued):—
 EDMONTON; Hampstead.
 M. 12, disease of the heart 1 year
 influenza 5 weeks
 dropsy 3 weeks
 STRAND; St. Mary.
 M. 40, bronchitis, influenza, old pleurisy about 3 weeks
 HOLBORN; St. George the Martyr.
 F. 82, influenza 2 weeks
 EAST LONDON; St. Botolph.
 F. 78, febrile catarrh 9 weeks
 sloughing over the sacrum 3 weeks
 paralysis 2 weeks
 F. 63, febrile catarrh 15 days
 exhaustion.
 SHOREDITCH; Hoxton, New Town.
 F. 86, influenza 10 days
 WHITECHAPEL; Artillery.
 F. 49, influenza 13 weeks
 STEPNEY; Ratcliff.
 F. 70, influenza 10 days
 — Mile End, Old Town (Upper).
 M. 15, consumption 3 years
 influenza 5 weeks
 ST. SAVIOUR; St. Saviour.
 M. 3, measles 4½ months
 scarlatina 4½ months
 influenza 2 months
 phthisis 6 weeks
 LAMBETH; Waterloo (first part).
 M. 1, influenza 2 months
 phthisis 6 weeks
 — Waterloo (second part).
 F. 3, influenza 5 days
 congestion of lungs *
 — Church (first part).
 F. 62, influenza 3 weeks
 erysipelas 3 days
 — Church (second part).
 M. 1, influenza 8 days
 pneumonia 5 days
 CAMBERWELL; Peckham.
 M. 10 weeks, influenza—enteritis 7 days
 M. 13, influenza; peritonitis, perforation of bowel—collapse about 14 days
 — St. George.
 F. 48, influenza 7 days
 WANDSWORTH AND CLAPHAM; Clapham.
 F. 8 months, epidemic catarrh 3 weeks
 general dropsy 1 week
 NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending Feb. 26th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.

Syphilis:—
 F. 9 weeks, congenital syphilis.
 F. 5 months, syphilis from birth
 F. 24, syphilis *
Malformations:—
 F. 14 days, malformation.
 M. 1 month, congenital malformation of the head—convulsions *
 M. 3 weeks, malformation of the heart. convulsions 24 hours
 M. 3 days (post mort.), congenital rectum imperforatum; stricture of colon.
 M. 5 days, rectum imperforatum.
 M. 50 hours, malformation of the rectum.
Hernia:—
 F. 65, strangulated hernia 1 week
 operation 3 hours
 In King's College Hospital, F. 47, hernia several years peritonitis 2 days
 In Guy's Hospital, F. 24, rupture of the stomach peritonitis 5 days
 F. 60, strangulated hernia *
 F. 48, strangulated hernia 14 days
Diabetes:—
 M. 36, diabetes mellitus 2 years
 M. 72, diabetes 3 years
 Stone;—No deaths registered from this cause.
Puerperal Fever and other Cases of Childbirth:—
 The time elapsing from commencement of labour to death should invariably be returned.
 F. 27, childbirth—puerperal fever 21 days
 F. 19, childbirth 10 days
 peritonitis 8 days
 F. 26, childbirth 8 days
 puerperal fever 6 days

Puerperal Fever, &c. (continued):—
 F. 28, childbirth 8 days
 puerperal fever 5 days
 F. 27, idiocy from birth
 parturition 10 days
 fever *
 F. 26, fever bringing on premature labour 6 days
 F. 21, (inquest, post mort.), natural death; sup-
 puration of the breast from suppression of
 milk after childbirth *
 F. 31, childbirth (placenta previa—flooding) 10 days
 puerperal mania *
 F. 37, childbirth 3 days
 F. 26, childbirth 6 days
 milk fever 3 days
 F. 26, childbirth 21 days
 uterine phlebitis 21 days
 F. 42, childbirth 4 hours
 F. 32, accouchement *
 erysipelas 1 week
Childbirth subsequent to Disease:—
 F. 35, childbirth 6 days
 phthisis some years
 F. 41, consumption—uterine hæmorrhage after
 labour *
 F. 35, phthisis 9 weeks
 anasarca 6 weeks
 childbirth 23 days
Delirium Tremens:—
 F. 28, delirium tremens 5 days
*Intemperance:—*No deaths ascribed to this cause.
*Privation:—*Want of Breast-milk; Inanition;—
 F. 5, marasmus from poor living—disease of
 chest—ulcerated sore throat *
 F. 3 months, want of breast-milk 3 weeks
 F. 3 months, want of breast-milk 3 weeks
 M. 7 months, atrophy abactatorum about 10 weeks
 F. 3 months, inanition arising from loss of the
 breast 2 to 3 weeks
Purpura:—
 M. 27, fever with purpura hæmorrhagica 5 days
 M. 6, purpura *
 hæmorrhagia 3 days
 M. 54, rheumatism—purpura *
Hæmorrhage, Hæmatemesis, &c.:—
 M. 59, rupture of a blood-vessel in the stomach
 In Bartholomew's Hospital, M. 61, vomit-
 ing of blood *
Miscellaneous Causes:—
 In St. George's Hospital, M. 46, (post mort.),
 abscess in trochanter major; and necrosed
 ilium (tubercles in left lung) 3 years
 In St. George's Hospital, M. 46, (post mort.),
 fever and ulceration of the intestines, which
 was traceable to the opening of a sewer at
 Cubitt's factory, Thames Bank.
 In St. George's Hospital, F. 20, (post mort.),
 rheumatic fever about 3 weeks
 with pericarditis and much effusion into the
 pericardium.
 In Westminster, M. 26, (inquest, post mort.),
 Infirmary patient from 21st Jan. (day of
 reception), tubercular peritonitis and tuber-
 cular disease of the lungs, accelerated by
 removal from Glasgow *
 (manslaughter against David Gibson, surgeon
 of Glasgow Gaol).
 M. 20, (p. m.), epilepsy 13½ years
 hypertrophy of brain—internal softening—
 weight 58½ oz.
 enlarged posterior cranioclinic processes.
 In sub-district of Gray's Inn Lane, M. 55,
 typhus occasioned by the filthy condition of
 the premises *
 M. 4 months, (inquest,) natural—died at mid-
 night out of doors; not precisely ill.
 In St. Bartholomew's Hospital, F. 49, cancer
 of the breast—operation *
 In London Hospital, F. 34 (p.m.), contractura
 colli 14 months
 erysipelas 7 days
 hepatised lungs 5 days
 In St. Thomas' Hospital, F. 46, carotid aneu-
 rism, died 2 months after operation, in con-
 sequence of secondary abscesses.
 In Dreadnought Hospital, M. 40 (post mort),
 stricture of urethra 14 years
 division of stricture 3 weeks
 suppuration of kidneys.
 In sub-district of Goswell-street, F. 46, Eng-
 lish cholera 5 days
 In St. Paul's, Deptford, F. 42, symptoms of
 cholera died 45 minutes after attack

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 4; childbirth, 1; violence, 37; other specified causes, 22; "found dead," "natural death," "visitation of God," &c., 10—TOTAL, 74 cases.
 THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 45.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 4th March, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 observations, to (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Negative and very active at 10h. 30m. a.m., and at midnight. Positive and weak at 3h. p.m. At other examinations nothing was shewn.	The sky was generally overcast till 6h. p.m., and clear afterwards; cirrostratus and scud. A violent squall of hail and rain occurred at 11h. a.m., and another at 5h. 30m. p.m. At 10h. 30m. a.m. the reading of the barometer was 28.775 in.; after this time this value increased, and at midnight was 29.015, in.
MON.	Positive and tension weak at 6h. p.m. and at midnight. Negative and active at 11h. 30m. p.m. Nothing was shewn at any other time.	The sky was about one half covered during the day: the clouds were cumuli, cirrocumuli, cirrostratus, fleecy clouds and scud. At 11h. 30m. p.m. a heavy shower of hail and rain occurred. The barometer readings increased during the day; at midnight it was 29.291 in.
TUES.	Negative, with strong tension at 6h. p.m. Nothing was shewn at any other time.	The sky was cloudless till 10h. a.m.; one half covered till 2h. p.m. and overcast afterwards with cirrocumuli, cirrostratus and scud. Rain was falling at intervals during the afternoon and evening. From noon till midnight the barometer readings increased; at midnight it was 28.749, in.
WED.	Nothing was shewn till noon. Negative, with weak tension at noon. Positive, with variable tension during the remainder of the day.	The sky was overcast throughout the day with cirrostratus and scud. A thin rain was falling during the morning. The barometer readings increased from noon till midnight, at which time it was 28.794 in.
THURS.	Nothing was shewn throughout the day.	The sky was generally overcast throughout the day with cirrostratus, fleecy clouds, and scud. The barometer reading increased quickly during the day; at midnight it was 29.407 in.
FRI.	Positive, with variable tension from noon till midnight. Nothing was shewn at any other time.	The sky was generally about one half covered during the day with cumuli, cirrostratus and scud. At 6h. 30m. p.m. a squall of hail and rain occurred, at which time the temperature of the air was 39.53; at noon it was 46.6. The barometer reading increased during the day, at midnight it was 29.959 in.
SAT.	Positive, and tension variable, throughout the day.	The sky was one half covered during the day with cumuli, cirrocumuli, cirrostratus and scud. The barometer reading during the earlier part of the day increased, and during the latter part decreased; at midnight it was 29.832 in.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average. The departures from the average have been variable this week, and at the end of the week they were very large in excess.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The minimum thermometer was out of order from Thursday, March the 2nd. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the main-mast, and read each day at 6h. 30m. a.m., was 40.8; and the mean reading at 7h. 30m. p.m. was 42.3; the mean readings at the Royal Observatory for the same times were 39.9 and 41.9 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING MARCH 4, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISIER.

On Sunday, February 27, the temperature of the air increased very rapidly early in the morning, and at 8h. A.M. was 52°; at 10h. A.M. it was 53°; at 11h. A.M. it was 51°; at this time a very heavy squall of hail, rain and wind took place, during which the temperature declined rapidly; at 11h. 2m. A.M. it was 48°; at 11h. 3m. it was 46°; at 11h. 4m. it was 45°; at 11h. 4m. 30s. it was 46°; at 11h. 5m. it was 47°; at 11h. 25m. it was 48°; after this time there was a slow increase till 3h. p.m., at which time it was 52°; a decrease then began, and at midnight the value was 45°. On Monday the temperature increased to 51° by 1h. p.m., and decreased to 41° by midnight. On Tuesday, the temperature was 37° early in the morning; it was 43° at noon; it decreased to 41° by 4h. 30m., and from this time it increased to 46° by midnight. On Wednesday, March 1, the temperature was 43° early in the morning; it was 48° at 8h. A.M., which was the highest point reached during the day; it then decreased to 39° by noon; an increase then commenced, and at 3h. p.m. it was 43°; from this time the temperature decreased; at midnight it was 37°. On Thursday, the temperature early in the morning was 38°, this value increased to 44° at noon, and decreased to 41° at midnight. On Friday, the temperature increased to 46° by 2h. 45m. p.m., and decreased to 35° by midnight. On Saturday, the temperature was as low as 27° early in the morning; at 3h. 15m. p.m. it was 48°, and decreased to 36° at midnight.

The readings of the barometer this week have been as remarkable as they have been in the three preceding weeks, on account of the long continuance of readings of a very low value. Within my experience I have not known any similar period with respect to such readings, as has taken place since the 9th day of February. On Saturday, Feb. 26, at midnight, the reading was 29.30 in.; this value decreased and increased alternately on Sunday, and at midnight the value was 29.26 in. During the whole of Monday the reading very slowly increased, and at midnight was 29.44 in.; this increase continued till 9h. A.M. on Thursday, at which time the reading was 29.49 in.; a decrease then began and at midnight the reading was 28.90 in., the value still decreasing. On March 1d, at 9h. A.M. the reading was 28.68 in., when it began to increase; at midnight it was 28.94 in.; this increase continued throughout Thursday, and at midnight was 29.56 in. The increase continued throughout Friday, at a somewhat less rapid rate, and at midnight the reading was 30.11 in.; still increasing. The maximum took place on Saturday, at 9h. A.M., at which time the reading was 30.17 in., being 1.49 in. greater than it was 3 days previously. During the remainder of Saturday the reading was decreasing, and at midnight was 30.03 in. These readings have been corrected and reduced to an uniform temperature of 32°. The height of the eastern of the barometer above the level of the sea is 40 feet.

The average temperature of the air for each day was as follows:—
Sunday, 47°; Monday, 47°; Tuesday, 42°; Wednesday, 40°; Thursday, 41°; Friday, 40°; and Saturday, 37°.

The difference of temperature during each day was as follows:—
Sunday, 9°; Monday, 12°; Tuesday, 10°; Wednesday, 5°; Thursday, 6°; Friday, 11°; and Saturday, 19°.

The difference of temperature during the week was 26°.

The average temperature of the Dew Point for each day was:—
Sunday, 44°; Monday, 40°; Tuesday, 37°; Wednesday, 40°; Thursday, 37°; Friday, 36°; and Saturday, 34°.

The average weight of water mixed with a cubic foot of air was as follows:—
Sunday, 3.5 gr.; Monday, 3.1 gr.; Tuesday, 2.8 gr.; Wednesday, 3.2 gr.; Thursday, 2.8 gr.; Friday, 2.7 gr.; and Saturday, 2.6 gr.

The following Table shews the comparative Meteorology since the year 1811.

Week ending March 4.	In the Years,							Excess or Deficiency in the week ending March 4, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	44.3	35.4	39.8	35.2	50.7	41.1	42.8	—1.5	+7.4	+3.0	+7.6	—7.9	+1.7	1.7
Temperature of the Dew Point	40.5	31.8	35.2	30.9	46.5	33.5	38.5	—2.0	+6.7	+3.3	+7.6	—8.0	+5.0	2.1
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	3.2	2.3	2.6	3.2	2.3	1.8	2.9	—0.3	+0.6	+0.3	+0.6	—0.3	+1.1	0.3

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1848, March 4, was 1° below the temperature of the corresponding week of 1842.

ERRATUM in the Observations for week ending February 26th:—Highest temperature of the Thames on Thursday: for 1.84 read 41.8.

Births and Deaths registered in London

During the Week ending Saturday, March 11th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 9.

(The tabular abstract on the first page is for the week ending Saturday, March 11th. The following selection of cases is made from the Returns for the week ending March 4th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Hanging and Suffocation (continued):—	duration
Innkeeper, 46, concussion of the brain from an accidental fall down a flight of stairs *		Grocer, 37, shot himself with a pistol in a temporary state of insanity.		M. 8, strangulation by means of a jack towel, into the loop of which he had placed his head at play.	
M. 59, fracture of his skull by falling down stairs..... 3½ hours		M. 33, cut his throat in a temporary state of insanity..... *		F. 4 weeks, suffocated by lying too close to the mother in bed; found dead.	
M. 5, injuries of the head from being pushed against a street cab by a boy unknown (at Swinton-street.) .. *		Drowning:—		Scalds:—	
Seedsman and fruiterer, 29, crushed by placing himself before a locomotive engine, &c., in progress on the London and South Western Railway (being of unsound mind)..... instant		Master-mariner, 33, accidental death by the upsetting of a barge (on the 29th Jan. 1848).		F. 2, accidental death from scalds from the upsetting of a pail of water	*
Injury, the nature not stated:—		Fisherman, 36, drowned by a boat-lighter being swamped from a high wind (in water 7 days.)		Poison:—	
In Guy's Hospital, M. 65, erysipelas brought on by an injury to his finger after amputation..... *		Apprentice seaman, 16, drowned by accidentally falling out of a ship's boat into the Commercial-dock.		M. 34 (no inquest), mortification of the lower bowels from eating large quantities of whole pepper..... 1 week	
		Hanging and Suffocation:—		Cold and Exposure:—	
		Widow (no occupation) 77, hanged herself in a state of temporary insanity.		M. 12 or 13 weeks (foundling), diarrhoea from cold or exposure—wilful murder against some person or persons unknown	*

DEATHS BY SMALL POX, INFLUENZA, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—

duration

Influenza (continued):—

duration

Childbirth (continued):—

duration

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

M. 19 days, small pox (vaccinated successfully)	*
M. 5 months, small pox—inflammation of lungs (not vaccinated)	*
F. 4, small pox (not vaccinated)	*
M. 3, small pox (not vaccinated)	5 days
F. 2, variola	2 weeks
F. 4, small pox (not vaccinated)	5 weeks
typhus	5 weeks
M. 21, confluent small pox vaccinated at the age of 10 months.	10 days
In Small Pox Hospital, M. 20, small pox, confluent, (unprotected)	29 days
In Small Pox Hospital, F. 11 months, small pox, semiconfluent (unprotected)	19 days
M. 6 months, small pox (not vaccinated)	7 days
F. 3, variola (not vaccinated)	10 days
F. 4, small pox (not vaccinated)	*
F. 1, confluent variola	13 days
M. 3, (inquest), small pox (neglected by the mother)	*
M. 3 months, small pox vaccinated 6 weeks ago.	14 days
M. 11 months, small pox vaccinated at 3 months without effect.	14 days
F. 1, small pox	11 days
first attack—vaccinated 10 months ago with effect.	
F. 43, small pox (not vaccinated)	14 days
M. 1, small pox	9 days
M. 5 months, confluent small pox	5 days
first attack—not vaccinated.	
M. 1, small pox, confluent (not vaccinated)	8 days
M. 5, small pox (not vaccinated)	9 days
F. 3, small pox, confluent (not vaccinated)	7 days
M. 30, small pox (vaccinated)	12 days
F. 3, small pox	7 days
F. 4, variola	12 days
F. 1, small pox (not vaccinated)	2 months
measles	1 month
hooping cough	*
M. 1, small pox	9 days
first attack—not vaccinated.	
M. 9 weeks, small pox (not vaccinated)	*

Influenza:—

CHelsea; South.	
M. under 1, influenza	5 days
— North West.	
F. 64, influenza	2 weeks
— North East.	
F. 63, influenza	1 week
ST. GEORGE, HANOVER SQUARE; Belgrave.	
F. 49, influenza—phthisis	about 2 months
ST. MARYLEBONE; The Rectory.	
M. 36, influenza	10 days
— St. Mary.	
F. 63, influenza—pleurisy	several weeks
— Christ Church.	
M. 75, influenza	8 weeks
— St. John's.	
M. 1 month, influenza	6 days
convulsions	3 days
ST. PANCRAS; Gray's Inn Lane.	
M. 6 months, influenza—bronchitis	*
— Kentish Town.	
F. 63, influenza—bronchitis—exhaustion	*

ST. GILES-IN-THE-FIELDS; North.

F. 60, typhus preceded by influenza	1 month
HOLBORN; St. George the Martyr.	
M. 80, decay of nature	*
influenza	3 months
inaction of kidneys.	

SPOREDITCH; St. Leonard's.

M. 6, decline from influenza	10 weeks
ST. MARY, NEWINGTON; Trinity.	
M. 53, influenza	6 weeks
typhus	3 weeks

LAMBETH; Brixton.

F. 2 months, influenza	5 days
pneumonia	5 days

GREENWICH; East.

M. 71, influenza	4 months
chronic bronchitis	4 months
diarrhea	*
M. 66, catarrhus febrilis	3 months
apoplexy	1 day
In Dreadnought Hospital, M. 26, (post mort.), influenza	32 days
epilepsy	6 hours
syncope—softening of cerebellum—general disorganization of muscular tissue of the heart, &c.	

NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending March 11th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.

Syphilis:—

In Dreadnought Hospital, M. (post mort.), syphilitic ulceration of throat and epiglottis	7 weeks
asphyxia	suddenly fatal
laryngotomy	*

Malformations:—

M. 11 months, (post mort.), congenital malformation of rectum.	
M. 10 days, anus imperforatus.	
M. 5 months, foramen ovale open—convulsions	*

Hernia:—

F. 61, gangrene of the intestines from an old umbilical hernia	*
M. 68, hernia	2 months
M. 85, paralysis—hernia—atrophia scutuli (progressive).	

Diabetes:—

In St. Bartholomew's Hospital, M. 30, diabetes	*
--	---

Stone:—No deaths registered from this cause.

Childbirth:—

The time elapsing from commencement of labour to death should invariably be returned.

F. 44, (post mort.), childbirth	26 days
puerperal peritonitis	17 days
purulent infiltration of lungs.	
abscess of kidney.	
F. 23, puerperal peritonitis	4 days
F. 35, puerperal peritonitis	*
F. 24, parturition	7 days
puerperal peritonitis	4 days
F. 28, childbirth	6 days
peritonitis	4 days
F. 19, puerperal peritonitis	9 days

F. 25, (inquest,) inflammation of womb, while in labour	*
F. 21, delivery of a dead child	2 days
F. 25, died during parturition, caused by placenta previa and plurality of children.	*
F. 32, delivery of a still-born male child.	
uterine hæmorrhage	2 hours
F. 29, childbirth	*
hæmorrhage	1½ hour
F. 41, miscarriage	6 weeks

Disease and Childbirth, &c.:—

F. 27, disease of the lungs	6 months
bronchitis	36 hours
childbirth	3 days
F. about 30 (inquest,) irritation from a neglected tumour of the breast occurring after suckling.	*
F. 25, pulmonary phthisis developed 14 days after confinement.	10 months
struma	*

Delirium Tremens:—

M. 29, delirium tremens	2 weeks
fever	2 months
M. 35, delirium tremens	5 days
M. 26, bilious fever	10 days
delirium tremens	12 days
F. 52, delirium tremens	7 days
In St. Bartholomew's Hospital M. 32, delirium tremens	*
M. 68, delirium tremens	3 days

Intemperance:—

F. 56 (ing.), exhaustion following delirium tremens from ceaseless intoxication	*
---	---

Privation:—Want of Breast-milk; Inanition:—

M. 5 months, atrophy, from wanting the breast	
M. 3 months, want of breast-milk.	from birth
marasmus	from birth
mesenteric disease	2 months
F. 6 weeks, inanition.	*

Purpura:—

M. 70, purpura hæmorrhagica	4 months
-----------------------------	----------

Fever and Scurvy:—

M. 57, fever	1 month
scurvy	many months

Phthisis and Scurvy:

In Dreadnought Hospital, M. 38, (post mort.), phthisis	*
scurvy	3½ months
latent pneumonia of right lung	4 days
large cavities and solidification of right lung.	

Hæmorrhage, Hæmatemesis, &c.:—

M. 44, rupture of a blood-vessel	*
F. 79, rupture of a blood-vessel	*
M. 2 weeks, hæmorrhage from the navel	2 days

Miscellaneous Cases:—

In King's College Hospital, M. 60, cancer of lip	several months
erysipelas following operation	10 days
In Guy's Hospital, M. 47 (post mort.), phlebitis and secondary abscess after amputation, 6 weeks ago	

The following occurred in the Dreadnought Hospital Ship:—

M. 32 (post mort.), typhus—delirium	4 days
coma	12 hours
congestion of brain—subarachnoid effusion—thickening of Peyer's patches.	
M. 18 (post mort.), typhus with pleurisy and effusion	11 weeks
contents of pleura bursting through intercostal spaces on each side of sternum	9 days

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Ossification of heart, 1; other disease of heart, 1; apoplexy, 5; childbirth, 2; small pox, 1; intemperance, 1; violence, 15; other specified causes, 13; "found dead," "natural death," "visitation of God," &c., 14—TOTAL, 53 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 49.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 11th March, 1848.

Day. 1849	Phases of the Moon	Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Negative, and at times very active; frequent sparks were shown, and there were galvanic currents occasionally.	The sky was overcast, and rain was falling steadily throughout the day.
MON.	Nothing was shewn till noon: at noon, and during the remainder of the day, positive with variable tension.	The sky was generally overcast till 9h. p.m., and clear afterwards; cirrostratus and scud.
TUES.	Positive, and tension variable throughout the day, except at 9h. a.m. when nothing was shewn.	The sky was overcast till 7h. p.m., and clear afterwards; cirrostratus and scud.
WED.	At 6h. a.m. and at 3h. p.m. nothing was shewn; at other times positive with moderate tension.	With the exception of a small break that occurred in the clouds near noon, the sky was overcast throughout the day with cirrostratus. A misty rain was falling from 6h. p.m. to 10h. 30m. p.m.
THURS.	Positive, with tension moderate at noon, 3h. p.m. and at 6h. p.m. At other examinations nothing was shewn.	The sky was overcast till 10h. 30m. p.m., and generally clear afterwards; cirrostratus and scud. A misty rain was falling during the afternoon.
FRID.	Positive, and tension strong at 9h. a.m., and weak at midnight. At 6h. p.m. negative and active. Nothing was shewn at any other time.	The sky was cloudless till 7h. a.m., and about three-fourths covered during the remainder of the day; cumuli, nimbi, cirrostratus and scud. A slight shower of rain fell at 6h. p.m.
SAT.	Nothing was shewn till 9h. a.m. From 9h. a.m. till noon strong negative electricity was shewn, frequent sparks and galvanic currents were exhibited. Slightly positive afterwards.	The sky was overcast till after noon; during the remainder of the day the clouds were variable in amount, till near midnight, when it became again overcast; cirrocumuli, cirrostratus, and scud. Between 10h. a.m. and noon violent squalls of hail and rain occurred. The readings of the barometer decreased rapidly during the day, and at midnight its reading was 28.608 in.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that it is read "higher," and — "lower," than the average. The departures from the average have been variable this week, and at the end of the week they were very large in excess.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The instruments have been under repair during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m., was 40.6; and the mean reading at 6h. p.m. was 44.1; the mean readings at the Royal Observatory for the same times were 39.5 and 43.3 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING MARCH 11, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

DURING Sunday, March 5, rain was falling throughout the day, and the temperature of the air was very uniform, and about 41°. On Monday, the temperature increased from 39° at 6h. a.m. to 45° at 2h. p.m., and decreased to 38° by midnight. On Tuesday, at 7h. a.m. the temperature was 33°; at 1h. 20m. p.m. it was 50°; and at midnight it was 31°. On Wednesday, early in the morning, the temperature was 26.7°; at 1h. 10m. p.m. it was 46.5°, it decreased to 45° by 3h. p.m.; to 44° by 5h. p.m., and between this time and midnight the change was 1° only; at midnight the value was increasing, and continued to increase till 3h. p.m. On Thursday, at which time it was 54°; the value then decreased to 49° by midnight. The average temperature of this day considerably exceeded that for the season. On Friday, the temperature was 38.2° early in the morning, this value increased to 45° by 9h. a.m.; at 10h. a.m. it was 41°; at noon it was 47°; at 1h. p.m. it was 45°; at 5h. p.m. it was 49°, and at midnight was 41°. During this day there were frequent squalls of wind and rain, and the temperature at such times decreased several degrees. On Saturday, the temperature increased and decreased frequently, the extreme values were 38° and 45°.

The reading of the barometer continues unsteady, and it has again decreased to a low point. From Sunday to Wednesday its changes were irregular, during Tuesday the increase was 0.43 in., and on Wednesday at 9h. a.m., the highest point during the week was reached, viz. 30.30 in., and from this time to the end of the week the reading decreased; it decreased below the point 30 in. on the 9th at 9h. a.m.; at midnight on this day it was 29.66 in.; at midnight on the 10th it was 29.43 in., and on Saturday at midnight it was 28.75 in., being again below 29 in. These readings have been corrected and reduced to 32°. The height of the eastern of the barometer is 40 feet above the level of the sea. Within my experience I have not known such a succession of large changes in the readings of the barometer, and such frequent low readings as have taken place since the 9th of February.

The average temperature of the air for each day was as follows:—

Sunday, 40.7; Monday, 41.5; Tuesday, 39.9; Wednesday, 36.6; Thursday, 47.0; Friday, 42.8; and Saturday, 41.94.

The difference of temperature during each day was as follows:—

Sunday, 2.5; Monday, 7.0; Tuesday, 10.2; Wednesday, 19.8; Thursday, 11.0; Friday, 9.3; and Saturday, 7.2.

The difference of temperature during the week was 27.3.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 38.1; Monday, 34.0; Tuesday, 34.2; Wednesday, 35.5; Thursday, 45.7; Friday, 37.0; and Saturday, 34.0.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 2.9gr.; Monday, 2.5gr.; Tuesday, 2.5gr.; Wednesday, 2.7gr.; Thursday, 3.7gr.; Friday, 2.8gr.; and Saturday, 2.5gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending March 11.	In the Years,							Excess or Deficiency in the week ending March 11, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	43.5	36.1	38.4	31.1	43.9	35.5	41.4	—2.1	+5.3	+3.0	+10.3	—2.5	+5.9	3.3
Temperature of the Dew Point	39.4	32.3	33.5	27.1	39.1	28.8	37.0	—2.4	+4.7	+3.5	+9.9	—2.1	+8.2	3.6
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	3.0	2.4	2.5	2.0	2.9	2.1	2.7	—0.3	+0.3	+0.2	+0.7	—0.2	+0.6	0.2

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1848, March 11, was 2.1 below the temperature of the corresponding week of 1842.

Births and Deaths registered in London

During the Week ending Saturday, March 18th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 10.

(The tabular abstract on the first page is for the week ending Saturday, March 18th. The following selection of cases is made from the Returns for the week ending March 11th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, it should be so stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued)	duration	Drowning (continued):—	duration
In St. Bartholomew's Hospital, teacher of the German language, 70 (<i>post mort.</i>), compound fracture of right leg from a fall in Monkwell-street, caused by stepping on a piece of orange peel.....	9 days	F. about 60, injuries caused by being run over by a carriage in Blackfriars road	2 days	Coachman, 31, drowned in the Serpentine River—no evidence how he came into the water—found drowned without marks of violence (supposed to have been in water 3 days).	
In St. Bartholomew's Hospital, spinster, 22, (<i>post mort.</i>), erysipelas arising from a wound on the head by falling into an area at Grafton-street, East	15 days	In St. Bartholomew's Hospital, widow of a boot-closer, 66 (<i>post mort.</i>), erysipelas brought on by a graze of the right arm against a wall at Golden-lane.....	2 weeks	M. 25 (person unknown) found dead—apparently drowned (without marks of violence)	
Son of an upholsterer 1, accidental fall, causing concussion of the brain	7 days	M. 82 (<i>no inquest</i>), fracture of the thigh.....	9 months	Apprentice seaman of the brig "Rockdale," of London, 17, drowned in the Thames; no marks of violence (no proof how he came into the water) immersed 10 hours.	
M. 3, accidental death by a fall from a chair, causing concussion of the brain.....	4 weeks	M. 32, found dead in bed with marks of violence caused in business.....	*	F. about 30 (person unknown), found drowned in the Thames—no marks of violence, no proof by what means—supposed to have been immersed 24 hours.	
Widow of a labourer, 86, fracture of the neck of the thigh bone, by accidentally falling over a stile	36 days	Drowning:—			
		Son of a chemist, 16, found dead—apparently drowned (without marks of violence).			

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Hanging:—

Lieutenant R. N., 61, hanging himself by a piece of linen to a door, a few minutes, in temporary insanity.
 F. 60, hanging himself by a cord to a peg in a door in temporary insanity (suspended 30 minutes).
 M. 3 months, asphyxia by bed clothes when laid to sleep; accidental.

duration

Hanging (continued):—

Daughter of a clerk in Doctors' Commons, 11 weeks, accidentally suffocated in bed.
 Son of an engineer, 8 weeks, accidentally suffocated in bed—overlaid.
 F. 11 mon., accidental suffocation by the bed clothes when laid to sleep.

duration

Burns and Scalds:—

F. 1 (no inquest), scalded trunk and extremities 17 days

Burns and Scalds (continued):—

duration

In St. Bartholomew's Hospital, son of a labourer, 6, burnt by his clothes taking fire, while reaching to the mantel-piece (at Fox-place, Gray's Inn-lane) 8 hours
 Means not Stated:—
 F. newly born found dead in the inclosure of Thurlow-square, wilfully murdered by a person or persons unknown.

DEATHS BY SMALL POX, INFLUENZA, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—

duration

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

M. 1, variola 12 days
 M. 5, small pox (not vaccinated) 12 days
 F. 3, small pox (not vaccinated) 6 days
 typhoid symptoms.
 F. 11 months, small pox (not vaccinated) 5 days
 dentition 3 weeks
 M. 8 weeks, small pox (not vaccinated) 10 days
 M. 9 months, small pox (not vaccinated) 15 days
 M. 3, confluent small pox (natural—not vaccinated) 9 days
 In Small Pox Hospital, M. 19, small pox, confluent (modified) 16 days
 hospital fever 8 days
 vaccinated when young at Brome—two small cicatrices.
 In Small Pox Hospital, M. 25, small pox, confluent (unprotected) 7 days
 In Small Pox Hospital, M. 29, small pox, confluent (unprotected) 12 days
 In Small Pox Hospital, F. 15, small pox, confluent, hæmorrhagic 10 days
 vaccinated when 4 years old at Hendon (one smooth cicatrix).
 M. 7, small pox (vaccinated with effect) *
 F. 7, small pox (vaccinated when an infant) .. *
 M. 10, small pox, confluent (vaccinated with effect when 6 months old) *
 M. 4 months, small pox, confluent (not vaccinated) *
 M. 22, confluent small pox 3 weeks
 F. 1, variola confusum 12 days
 vaccinated unsuccessfully.
 M. 20, (post mort.), pneumonia which superseded upon confluent small pox *
 F. 5, variola confluent 13 days
 vaccinated at the age of 3 months without effect.
 M. 8 months, small pox 7 days
 not vaccinated—first attack.
 F. 3, small pox (not vaccinated) *
 M. 3, small pox (vaccinated with effect 2 years ago) *
 M. 1, small pox (not vaccinated) *
 F. 3, small pox (not vaccinated) 11 days
 F. 8, natural small pox (not vaccinated) 14 days
 F. 3, small pox 10 days
 not vaccinated—supposed to have had small pox when 1 month old.
 F. 8, small pox (not vaccinated—first attack) .. *
 F. 1, small pox, confluent (not vaccinated) 8 days
 F. 4, small pox (not vaccinated) 10 days
 F. 1, small pox 5 days
 M. 1, small pox (not vaccinated) 10 days
 M. 1, small pox (vaccinated) *
 M. 1, small pox (not vaccinated) *
 F. 1, variola; congestion of brain; hypertrophy of brain *
 M. 1, small pox 3 weeks
 first attack—vaccinated with effect when about 6 weeks old.
 F. 4 months, small pox (not vaccinated) 9 days
 F. 1, variola (not vaccinated) 7 days
 F. 3, confluent small pox—laryngitis 14 days

Influenza:—

PADDINGTON; St. John.

F. 53, influenza; pneumonia *

Influenza (continued):—

duration

CHELSEA; North West.
 M. 55, influenza 1 month
 bronchitis 1 week
 St. MARYLEBONE; All Souls.
 M. 64, influenza—bronchitis *
 Cavendish Square.
 M. 47, influenza; and suppressed gout *
 EAST LONDON; Cripplegate.
 M. 73, influenza—bronchitis *
 SHOREDITCH; Holywell and Moorfields.
 M. 1, influenza—hydrocephalus *
 STEPNEY; Mile End, Old Town (Lower).
 M. 70, asthma—influenza 8 weeks
 St. GEORGE-THE-MARTYR; Borough Road.
 M. 4, influenza—pneumonia *
 LAMBETH; Kennington (first part).
 M. 7 months, (inquest), natural death; teething; influenza *
 CAMBERWELL; St. George.
 F. 63, influenza 1 week
 WANDSWORTH, &c.; Clapham.
 M. 70, bronchitis; epidemic influenza 8 weeks
 NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending March 11th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.
 Syphilis:—
 M. 25, secondary syphilis followed by influenza, then rheumatic fever *
 M. 4 months, (ing.), disease having syphilitic character from birth
 Malformations:—
 M. 10 weeks, atrophy from birth
 malformation.
 M. 10 months, malformation of the heart—effusion of blood on the brain *
 F. 11 months, cleft palate.
 atrophy from want of breastmilk... from birth
 Hernia:—
 In St. Bartholomew's Hospital, F. 53, strangulated hernia—operation *
 Diabetes:—
 M. 42, diabetes 4 weeks
 Stone:—
 In University College Hospital, M. 54, (p. m.), stone in the bladder *
 operation *
 disease of bladder and kidneys *
 M. 69, two calculi vesicæ *
 lithotomy, exhaustion 3 days
 thickening and ulceration of bladder; emphysema of lungs *

Childbirth:—

duration

The time elapsing from commencement of labour to death should invariably be returned.
 F. 29, peritoneal inflammation after childbirth *
 F. 34, acute bronchitis 5 weeks
 peritonitis after childbirth 2 weeks
 marasmus *
 F. 36, childbed fever 8 days
 F. 30, puerperal fever 14 days
 F. 37, parturition 13 days
 phlebitis 5 days
 F. 32, parturition—hæmorrhage—diarrhoea *
 F. 23, diphtheritis during the puerperal state. *
 F. 25, premature labour with excessive hæmorrhage 10 days
 exhaustion *
 F. 28, puerperal mania *
 Phthisis and Childbirth:—
 F. 19, puerperal mania 6 weeks
 phthisis *

Delirium Tremens:—

M. 33, insanity preceded by delirium tremens 3 years dementia 1 year
 M. 44, delirium tremens 7 weeks

Intemperance:—

M. 35, (inquest), natural death, sudden from delirium tremens accelerated by excessive drink *
 F. 67, (inquest), natural death—bronchitis—congestion of the lungs—from the habitual use of opium.

Privation:—Want of Breast-milk; Inanition:—

M. 3 months, atrophy from want of breast-milk, 3 weeks *
 M. 5 days, inanition—convulsions *
 F. 8 days, debility; premature birth; no breast-milk.

Purpura:—

M. 6, purpura and epistaxis *

Hæmorrhage, Hæmatemesis, &c.:—

No deaths classed under this head.

Hæmatemesis with Ascites, &c.:—

M. 28, hæmatemesis 2 weeks
 ascites 1 week
 peritonitis 24 hours

Disease of Liver with Hæmatemesis:—

F. 58, diseased liver some years
 hæmorrhage from stomach and bowels... 2 days

Ulceration of Stomach; Hæmatem:—

F. 30, ulceration of stomach *
 hæmatemesis 4 days

Miscellaneous Cases:—

In Dreadnought Hospital, M. 24, (post mort.), cæcal abscess opening through right loin. 8 months
 phlebitis and purulent deposits in the liver and lungs.
 In Dreadnought Hospital, M. 22, incision of abscess in the cheek 23 days
 erysipelas of wound, on the face and scalp 9 days
 prostration.
 In Long Acre Subdistrict, F. 2 months, cholera 6 days
 In one family at Islington, a boy of 4 years and two girls respectively 3 and 11 years, died of "scarlatina maligna," each after an illness of 3 days.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 9; disease of the heart, 3; syphilis, 1; opium, 1; spirituous liquors, 1; violence, 21; other specified causes, 16; "found dead," "natural death," "visitation of God," &c., 12—TOTAL, 64 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was held, is 42.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 18th March, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Nothing was shewn till near midnight, when it was positive with very weak tension.	Overcast throughout the day. Rain was falling at intervals during the morning and evening.
MON.	Positive and tension variable till 3h. p.m. Negative and very active at 6h. p.m. At midnight nothing was shewn.	With the exception of a small break that occurred in the clouds near noon, the sky was overcast throughout the day; cirrostratus. Rain was falling during the afternoon.
TUES.	Nothing was shewn till noon. Positive and tension strong during the remainder of the day.	The sky was overcast till 3h. p.m., about one-third part was covered till 6h. p.m., and it was cloudless afterwards. Cumuli, cirrocumuli, cirrostratus and scud.
WED.	Nothing was shewn till noon. Positive and tension strong during the remainder of the day.	The sky was generally overcast throughout the day; cirrostratus. A thin rain was falling during the afternoon and evening.
THURS.	Nothing was shewn till noon. From noon till 3h. p.m. negative and active. Positive and tension moderate during the remainder of the day.	The sky was overcast throughout the day. Rain was falling generally.
FRI.	From 9h. a.m. till 3h. p.m. negative with variable tension. Positive and tension weak at 6h. p.m. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus. Rain mixed occasionally with sleet was falling till 10h. 30m. p.m.
SAT.	Positive and tension variable till 3h. p.m. Nothing was shewn afterwards.	The sky was overcast till 9h. a.m.; from this time till 6h. p.m. the amount of cloud was very variable; cloudless afterwards: cumuli, cirrocumuli, cirrostratus and scud.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average. The departures from the average have been variable this week, and at the end of the week they were very large in excess.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The instruments have been under repair during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m., was 36.5; and the mean reading at 6h. p.m. was 42.2; the mean readings at the Royal Observatory for the same times were 37.8 and 41.5 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING MARCH 18, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, March 12, the sky was overcast throughout the day; rain was falling frequently in dashing showers, and the variation of the temperature of the air during the day was 4° only; the extreme values were 43° and 39°. On Monday the temperature was 34° early in the morning; at 1h. p.m. it was 42° 5, and at midnight was 38° 5. On Tuesday the temperature early in the morning was 36°; at 12h. 45m. was 50°; and at midnight was 31°; this value decreased to 29° early in the morning of Wednesday, and this was the lowest point reached during the week; it afterwards increased rapidly, and was 52° 5 at 2h. 35m. p.m.; at midnight it was 40°. On Thursday, March 16, the temperature early in the morning was 37° 5; at 2h. 45m. p.m. it was 45° 5; and at midnight was 39°. On Saturday till 7h. a.m. the temperature was 41° without variation; at 9h. a.m. it was 45°; at 1h. 18m. p.m. it was 56°, being the highest value during the week; and at midnight was 35°.

The reading of the barometer throughout the week has been low and unsteady. On Saturday, March 11, at midnight, it was 28.75 in.; this value decreased till Sunday, March 12, at 10h. a.m., at which time it was 28.63 in.; and afterwards increased, but only reached 29 in. at midnight. During Monday and Tuesday the readings constantly increased; on the former day at midnight it was 29.54 in.; and on the latter it was 29.86 in., and this value is 1.23 in. greater than the reading on Sunday, March 12, at 10h. a.m. On Wednesday morning it was found that the reading was again decreasing; at 9h. a.m. it was 29.79 in., and at midnight the reading was 29.59 in. During Thursday the readings continued to decrease, and at midnight it was 29.49 in. On Friday at 9h. a.m. it was 29.33 in.; after this time the reading slightly increased, its value at midnight was 29.45 in. During Saturday the readings again increased, and at midnight was 29.30 in. These readings have been corrected and reduced to 32°. The height of the cistern of the barometer is 40 feet above the level of the sea.

The average temperature of the air for each day was as follows:—

Sunday, 41° 0; Monday, 38° 3; Tuesday, 40° 5; Wednesday, 40° 8; Thursday, 41° 5; Friday, 40° 3; and Saturday, 45° 0.

The difference of temperature during each day was as follows:—

Sunday, 4° 0; Monday, 8° 5; Tuesday, 19° 0; Wednesday, 13° 5; Thursday, 6° 0; Friday, 7° 5; and Saturday, 20° 0.

The difference of temperature during the week was 27° 0.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 36° 8; Monday, 34° 0; Tuesday, 33° 5; Wednesday, 38° 5; Thursday, 40° 0; Friday, 38° 0; and Saturday, 39° 5.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 2.7 gr.; Monday, 2.5 gr.; Tuesday, 2.5 gr.; Wednesday, 3.0 gr.; Thursday, 3.1 gr.; Friday, 2.9 gr.; and Saturday, 3.0 gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending March 18.	In the Years,							Excess or Deficiency in the week ending March 18, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	38.8	50.6	35.5	39.9	39.2	46.6	41.1	+ 2.3	— 9.5	+ 5.6	+ 1.2	+ 1.9	— 5.5	— 0.7
Temperature of the Dew Point	33.9	45.8	31.6	35.7	34.5	38.2	37.2	+ 3.3	— 8.6	+ 5.6	+ 1.5	+ 2.7	— 1.0	+ 0.5
Mean Amount of Water in a Cubic Foot of Air	2.5	3.7	2.5	2.7	2.0	2.0	2.7	+ 0.2	— 1.0	+ 0.2	0.0	+ 0.7	+ 0.7	+ 0.1

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, March 18, was 2° 3 above the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, March 25th, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

* Includes 1366 Men on the River, and 3090 Police on Duty.

† Deaths in any of the following 15 Hospitals are not included in the numbers thus marked (†).

Three Workhouses which belong to the City of London, are situated in the districts of Stepney, Lambeth, and Camberwell; one which belongs to the Strand, is in St. Pancras; and another which belongs to St. Luke, is situated in the district of Shoreditch. The deaths in these are placed in the table to the City of London, Strand, and St. Luke, respectively, not to the districts in which they were registered.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 11.

(The tabular abstract on the first page is for the week ending Saturday, March 25th. The following selection of cases is made from the Returns for the week ending March 18th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued)	duration
In University College Hospital, bricklayer, 52, erysipelas of leg and trunk spreading from a wound of the knee, caused by the fall of a scaffold in front of a house, while at work (not known why the scaffold fell)	*	Clerk in the Prerogative Court, 56, erysipelas from a scalp wound received from being knocked down by a horse in a brougham, near the Surrey theatre accidentally.	13 days	Seaman, 22, found dead, with mortal injuries, in the waters of the Thames (how caused unknown, but apparently after death).	
M. 3, accidental death by a fall down stairs, producing concussion of the brain	6 months	In Westminster Hospital, son of a button-maker, 7, erysipelas and fever after a blow on the leg, struck by another boy with a stick when at play	12 days	M. 46 (no inquest), fractured rib	6 months
Widow of a solicitor, 81, dislocation of the neck by a fall down stairs accidentally.		erysipelas	6 days	M. 11 (no inquest, post mort.), contusion of the scalp	4 days
Daughter of a porter, 7, accidentally run over by a horse and cart in Aylesbury-street ..	*			effusion of blood in the cerebrum.	
				M. 57 (no inquest), injured spine	1 day

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Wounds:—	duration	Drowning (continued):—	duration	Hanging (continued):—	duration
Newspaper reporter, 42, cutting his throat with a razor (suicide in temporary insanity), about 10 minutes		M. about 36, found dead in the Thames without marks, apparently drowned.		Sailor, 18, effects of suffocation in the hold of a ship from vapour of charcoal placed there to poison rats.	
Straw-bonnet-maker (single woman), 21, cut her throat in temporary insanity.		Labourer, 42, suicide by drowning himself in the River Wandle (in temporary mental derangement from poverty and distress), in water 1½ hour.		M. 55, accidental death from inhaling gas at the time of cutting a gas pipe.	
Fruiterer, 51, suicide by cutting his throat with a razor (being of unsound mind).... 30 minutes				M. 38, suffocated by earth falling on him, while making a sewer (under the earth 15 minutes.)	
Drowning:—		Hanging:—		Burns and Scalds:—	
Sea-boy, 19, found dead—apparently drowned, in the River Thames.		M. 44, hanged himself to the rail of a bedstead when of unsound mind.		Son of a coal-heaver, 2, burn of body and arms—clothes took fire when with other young children in his mother's room, supposed to have been lighting a candle at the fire 4 days	
F. servant, 18, accidentally drowned by falling from a skiff.		M. 20, hanging himself by a handkerchief to a beam in a privy (temporary insanity) died in a few minutes.		Son of a plasterer, 1, accidental from the upsetting of a kettle of boiling water. 14 days	
Spinster (not in business), 24, found dead in the waters of Hermitage Dock, without marks of violence.		Master carpenter, 59, suicide by hanging himself (being of unsound mind).		Poison:—	
Waterman, 61, found dead without marks of violence, apparently drowned.		M. newly born (found dead in a privy), wilful murder by compression of the neck by a ligature and thumb of some person or persons unknown.		F. 35 (no inquest), absorption of animal poison—inflammation of absorbents, and internal inflammation	*
M. about 16, accidentally drowned whilst sculling a boat.					

DEATHS BY SMALL POX, INFLUENZA, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Influenza (continued):—	duration	Erysipelas and Delirium Tremens:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		GREENWICH; East.		M. 50, phlegmonous erysipelas	3 days
M. 7, small pox (not vaccinated)..... 15 days		M. 71, asthma habitual..... *		delirium tremens	1 day
M. 5, ptechieal small pox (not vaccinated).... 5 days		influenza	4 months ago	Intemperance:—No deaths from this cause.	
In Small Pox Hospital, M. 26, small pox, confluent (unprotected)..... 11 days		WANDSWORTH, &c.; Clapham.		Privation:—Want of Breast-milk; Inanition:—	
In Small Pox Hospital, M. 22, small pox, confluent (unprotected)..... 17 days		F. 1, catarrhus epidemics	14 days	M. 17 months, (inquest), atrophy from insufficient and improper food	14 days after weaning
In Small Pox Hospital, F. 29, small pox, confluent (unprotected)..... 2 days		pneumonia	7 days	M. 6 weeks, inanition	4 weeks
In Small Pox Hospital, F. 23, small pox, confluent (unprotected)..... 8 days		NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending March 18th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.		M. 10 days, want of breastmilk	*
In Small Pox Hospital, F. 29, small pox, confluent (unprotected)..... 13 days		Syphilis:—		Purpura:—No deaths from this cause.	
M. 3, small pox (not known whether vaccinated) .. *		F. 7 months, emaciation from syphilis	3 months	Hæmorrhage, Hæmatemesis, &c.:—	
F. 1, small pox (not vaccinated) .. *		F. 3 months, syphilis	from birth	M. 65, (inquest), rupture of a bloodvessel on the lungs (natural death)	*
M. 30, small pox—inflammation of brain .. *		convulsions	1 day	F. 62, hæmatemesis	24 hours
F. 1, small pox (not vaccinated) .. *		F. 70, diarrhæa and eruption produced by repeated attacks of venereal disease	*	had an attack a year ago.	
F. 22, variola	7 weeks	Malformation:—		Other Cases:—	
not vaccinated.		F. 3 days, anus imperforatus (congenital).		M. 3 weeks, hæmorrhage from the bowels. 3 days	
F. 1, confluent small pox (not vaccinated).... *		M. 2 months, (post mort.), foramen ovale open.		F. 65, ossification of valves of the heart..... 6 years	
M. 2, (ing.), natural death from small pox.... *		Hernia:—		hæmatemesis..... 4 weeks	
M. 6 months, small pox	*	In King's College Hospital, M. 34, strangulated hernia	10 days	Miscellaneous Cases:—	
M. 3, small pox	19 days	peritonitis after operation	2 days	F. 30, (p. m.) ascites..... 4 months	
first attack—not vaccinated.		F. 39, (inquest), natural death—hernia	*	paracentesis abdominis	7 days
F. 31, small pox	6 days	Diabetes:—		liver hypertrophied and completely disorganized.	
not known whether vaccinated.		In Gny's Hospital, M. 45, (p. m.) diabetes 3 or 4 years		M. 65, (p. m.) ulceration of the bowels caused by the lodgment of a large gall stone 7 weeks	
M. 3 months, small pox	*	phthisis	*	In King's College Hospital, M. 34, fungus hæmatodes	many months
M. 3 weeks, small pox (not vaccinated)	18 days	Stone:—		erysipelas after operation	3 weeks
M. 3, variola conflens	3 weeks	In Gny's Hospital, M. 5, (p. m.) calculi	*	F. 5 months, erysipelas inflammation of the arm and chest consequent on vaccination	5 days
exhaustion..... 5 days		cystitis—nephritis	*	M. 3, cyanche tonsillaris..... 4 months	
F. 4 months, small pox	13 days	peritonitis	3 days	bronchitis after tracheotomy	5 days
first attack—vaccinated with effect 9 days before eruption.		Childbirth:—		In the Town of Kensington, F. 28, cholera biliosa	*
M. 1, small pox (first attack—not vaccinated) 15 days		The time elapsing from commencement of labour to death should invariably be returned.		M. 3, pneumonia—exhaustion arising from malaria	*
M. 21, congestion of lungs—swelling in the throat—and distinct small pox (vaccinated) .. *		F. 26, puerperal fever	10 days	At 12, Union-place, Saffron-hill, M. 8 months, scarlet fever	5 days
		In Workhouse, Camden Town, F. 23, debility—slonging of cheeks after puerperal peritonitis .. *		The house stands over the old Fleet Ditch, whence the smells that arise are extremely offensive.	
		F. 46, childbirth—typhoid fever with tympanites	3 days	F. 12 weeks (inquest), sudden death, from fright caused to her mother by a mob.	
		F. 37, childbirth	5 days		
		puerperal fever	44 hours		
		†F. 25, puerperal peritonitis	9 days		
		†F. 26, puerperal peritonitis	5 days		
		†F. 24, puerperal peritonitis	8 days		
		†F. 24, puerperal peritonitis	9 days		
		F. 35, puerperal fever	3 years (?)		
		marasmus	4 weeks		
		F. 31, puerperal peritonitis	3 days		
		F. 30, puerperal peritonitis	4 days		
		F. 33, puerperal peritonitis	5 days		
		F. 38, puerperal fever	30 hours		
		F. 39, accouchment—convulsions	*		
		F. 36, flooding after delivery	6 hours		
		F. 42, exhaustion after labour	4 days		
		† Those marked thus (†) occurred in the City of London Lying-in-Hospital.			
		Delirium Tremens:—			
		M. 35, delirium tremens	15 days		
		M. 48, delirium tremens	1 week		
		M. 37, delirium tremens	several months		
		In St. Thomas' Hospital, M. 37, delirium tremens—epilepsy	*		

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 3; disease of the heart, 3; hernia, 1; violence, 27; other specified causes, 16; "found dead," "visitation of God," "natural," &c., 13—TOTAL, 63 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 44.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 25th March, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive and tension strong throughout the day.	The sky was cloudless till 11h. a.m., and about one-half covered during the remainder of the day. Cumuli, cumulo-strati, cirrostratus, and scud. A thick fog prevailed till 9h. 30m. a.m.; at 4h. 10m. a shower of rain fell.
MON.	At 6h. a.m., noon, and at 6h. p.m. nothing was shewn. At other times negative with moderate tension.	The sky was about three-fourths covered during the day with cirrostratus. Rain was falling occasionally during the morning and shortly before midnight. An aurora at night and the magnets disturbed.
TUES.	Positive and very weak at 6h. a.m. Negative and active at 9h. a.m. Nothing was shewn afterwards.	The sky was overcast till noon, and the amount of cloud was variable afterwards; cirrostratus. Rain was falling heavily during the morning. At 6h. a.m. the reading of the barometer was 28.630 in. being the lowest reading during the week.
WED.	Nothing was shewn throughout the day.	The sky was generally cloudless till noon, and overcast during the remainder of the day with cirrostratus. A thin misty rain was falling during the evening.
THURS.	Nothing was shewn throughout the day.	The sky was overcast till noon; about one-half covered till 7h. p.m.; and overcast afterwards; cirrostratus.
FRID.	Nothing was shewn throughout the day.	The sky was overcast throughout the day except between 8h. a.m. and 11h. a.m. when it was generally about one-half covered.
SAT.	Positive and very weak tension at 6h. p.m. Nothing was shewn at any other time.	The sky was about one-third part covered with cloud between 5h. a.m. and 6h. a.m.; with this exception it was generally overcast throughout the day. At 9h. a.m. the reading of the barometer was 30.000 in., being the highest during the week.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average. A note commencing "The departures from the average," &c., has been improperly repeated in this place, since week ending Feb. 5th.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The instruments have been under repair during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 42.1; and the mean reading at 7h. 30m. p.m. was 48.7; the mean readings at the Royal Observatory for the same times were 42.0 and 47.5 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING MARCH 25, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, March 19, the temperature of the air, early in the morning, was 29°; this value increased to 51° by 11h. 30m. p.m.; it remained at this value till 3h. p.m., and was 40° at midnight. On Monday, the temperature early in the morning was 30.5°; it increased to 50° by 2h. 30m. p.m., and was 39° at midnight. On Tuesday the temperature was 41° till 6h. a.m.; at 8h. a.m. it was 44°; at 10h. a.m. a heavy rain was falling, mixed with hail and snow, and the temperature suddenly decreased to 37°; at 11h. a.m. it was 38°; at 1h. p.m. it was 42°; at 2h. p.m. it was 42°; at 3h. p.m. it was 44.2°, and at midnight was 37°. On Wednesday, early in the morning, the temperature was 31.5°; at 7h. a.m. it was 32°; at 9h. a.m. it was 40°; between 2h. p.m. and 3h. p.m. it was 53°; and decreased to 51° by midnight. On Thursday till 7h. a.m. the temperature was 50°; between 2h. and 3h. p.m. it was 57°, and at midnight was 47°. On Friday the temperature was 47.8° till 7h. a.m.; between 10h. a.m. and 4h. p.m. it was either 52° or 53°, and at midnight was 46°. On Saturday the temperature was 39° till 6h. a.m.; at 3h. p.m. it was 47.5°, and at midnight was 41.9°.

The highest reading of the thermometer during the week was 57.5°, and the lowest was 29°; the range of temperature during the week was 28.5°. The change in the reading of the barometer this week has been considerable.

On Saturday, March 18, at midnight, the reading was 29.30 in. On Sunday, at 7h. a.m. it was 29.45 in., and from this time it decreased; at midnight it was 29.15 in. During Monday the reading decreased, and at midnight was 28.92 in. On Tuesday, at 7h. a.m. it was 28.81 in., at which time it turned to increase, and at midnight was 29.47 in.; the increase continued till 9h. a.m. of Saturday.

On Wednesday at midnight the reading was 29.68 in.; on Thursday at midnight it was 29.90 in.; on Friday at midnight it was 30.14 in.; and on Saturday, March 25, at 9h. a.m. it was 30.15 in., a reading 1.34 in. greater than that on Tuesday, March 21, at 7h. a.m. After March 25h., at 9h. a.m. the reading decreased, and was 30.00 in.

The average temperature of the air for each day was as follows:—

Sunday, 40° 0; Monday, 42° 0; Tuesday, 38° 3; Wednesday, 42° 2; Thursday, 51° 8; Friday, 48° 8; and Saturday, 46° 5.

The difference of temperature during each day was as follows:—

Sunday, 22°; Monday, 20°; Tuesday, 12° 5; Wednesday, 21° 5; Thursday, 11° 5; Friday, 7° 5; and Saturday, 12° 0.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 37° 8; Monday, 38° 5; Tuesday, 35° 0; Wednesday, 41° 0; Thursday, 43° 0; Friday, 41° 5; and Saturday, 40° 0.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 2.9 gr.; Monday, 2.9 gr.; Tuesday, 2.7 gr.; Wednesday, 3.1 gr.; Thursday, 3.5 gr.; Friday, 3.1 gr.; and Saturday, 3.0 gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending March 25.	In the Years,							Excess or Deficiency in the week ending March 25, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	38.8	50.6	40.9	39.6	39.2	38.8	44.2	+ 5.4	— 6.4	+ 3.3	+ 4.6	+ 5.0	+ 5.4	2.9
Temperature of the Dew Point	33.9	45.8	35.5	35.7	34.5	31.9	39.5	+ 5.6	— 6.3	+ 4.0	+ 3.8	+ 5.0	+ 7.6	3.3
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	2.5	3.7	2.7	2.7	2.5	2.4	3.0	+ 0.5	— 0.7	+ 0.3	+ 0.3	+ 0.5	+ 0.6	0.3

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1818, March 25, was 5° 4 above the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, April 1st, 1848.

ANNUAL SERIES IX.]

Weekly Average derived from Deaths of 1843-4-5-6-7, and corrected for increase of Population		Deaths registered in the Week		Births registered in the Week	
Males	560	Males	650	Males	836
Females	547	Females	644	Females	845
Total	1107	Total	1294	Total	1681

* The age of a person whose death is enumerated under "fractures," is not stated.

NOTE. The increase in the number of deaths registered in the last week is caused by an accumulation of Coroner's cases, many of which occurred in a previous part of the quarter, but were not registered till the end of it. The whole number of inquests registered in thirteen weeks was 910; the weekly average is, therefore, 70. The inquests registered last week were 213. By deducting 143 (viz. 213-70) from 1294, the total deaths registered, the result, 1151, is obtained as an approximation to the actual number of deaths which occurred in the week.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 12.

(The tabular abstract on the first page is for the week ending Saturday, April 1st. The following selection of cases is made from the Returns for the week ending March 25th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.			
NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."			
Fractures and Contusions:—	duration	Fractures and Contusions (continued)	duration
In Charing Cross Hospital, porter, 41, delirium tremens, from compound comminuted fracture of right leg by an accidental fall down the steps of Morley's Hotel, Trafalgar-sq., 35 days		F. 58, accidental death by a fall down part of a flight of stairs	*
Hawker, 66, injuries of the head from falling down stairs whilst drunk, at night	*	In St. Thomas' Hospital, M. 82 (no inquest), had a fractured arm, but died from general debility	*
F. cook, 41, injury of the brain from a fall down stairs whilst drunk	3 weeks	Labourer, 22, killed by the wheels of a waggon passing over his body, having fallen from the shafts	instantly
Porter, 28, injuries of the head from falling down a well-hole in a warehouse, while loading a van with a bookcase	*	Wounds:—	duration
		Wife of a coffee-shop keeper, 34, suicide—cut her throat with a razor	30 minutes
		Drowning and Immersion:—	
		M. supposed about 25 (unknown) drowning—found dead in the Thames—without marks of violence—no evidence how he came into the water.	
		M. 9, found dead in the River Thames—apparently drowned, without marks of violence. Spinster, 21, from the effects of being accidentally immersed in the Thames at Woolwich. Labourer, from 20 to 25 (person unknown) apparently drowned—found dead in the Thames at Woolwich—body much decomposed.	

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Hanging and Suffocation:—	Burns and Scalds (continued):—	Poison:—
Sodawater-maker, 57, suicide by hanging (an habitual drunkard).	M. 5, burn of back. 5 weeks	Porter, 45, half a pint of oil of vitriol taken whilst insane (so rendered by the drunken habits of his wife) 20 hours
Coffeshop-keeper, 31, suicide—found hanging by the neck.	Daughter of a porter, 3, burns from firing her clothes at a candle, whilst locked in a room by her mother, when gone on an errand *	F. 19, suicide with oxalic acid on being discharged from service (not known to be insane) 26 hours
M. 10 weeks, found dead on his mother's breast, apparently suffocated.	Son of a carver, 4, burns from his pinafore taking fire at a grate without a guard, in absence of his mother *	Daughter of a warehouseman, 3 months, natural death which may have been accelerated by an over-dose of syrup of poppies given as a sedative.
Burns and Scalds:—	Daughter of a bricklayer, 4, extensive burns received by her clothing accidentally taking fire 72 days	NOTE.—Two persons, husband and wife, the former 68 years, the latter 53, were registered in a previous week, as having died from "paralysis," and "consumption" respectively. Inquests were afterwards held on the bodies, and the following verdict was returned in each case:—"Unknown—but on opening the body a brown fluid was discovered, the smell of which resembled hemlock—how taken into the stomach unknown."
In Charing Cross Hospital, daughter of a coal porter deceased, 7, burns of body, face, and limbs, from clothes taking fire (supposed when playing with a red hot poker) 39 hours	Widow of a coachman, 83, accidentally burnt to death by her clothes taking fire *	
French polisher, 5, accidental burn—clothes caught fire while standing before a stove *	M. 6, scald from a child upsetting a cup of hot water on his head and shoulder 2 weeks	
Son of a blacksmith, 4, burns from his clothes taking fire at a grate without a guard in absence of the mother *	Poison:—	
F. 5, wounds caused by accidental burns *	F. 40 (post mort.), arsenic—no evidence how taken or administered *	
Daughter of a bricklayer's labourer, 2, burns from a candle setting fire to her clothes whilst her mother was drunk in the room *	M. 62 (post mort.), natural—diseased heart—dropped suddenly at work and died instantly—supposed to have been poisoned by a cake.	

DEATHS BY SMALL POX, INFLUENZA, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	Influenza (continued):—	Childbirth (continued):—
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.	HACKNEY; Stoke Newington.	F. 22, childbirth—diarrhœa 8 days
M. 8, variola 14 days	F. 6 weeks, influenza 4 or 5 days	F. 43, dyspepsia prior to childbirth 3 months
M. 1 month, small pox 5 days	HOLBORN; St. George the Martyr.	labour protracted and difficult, followed by flooding 10 days
F. 27, small pox 17 days	M. 51, abscess of the lungs arising from influenza 3 months	F. 23, childbirth *
peritonitis, vaccinated with effect some years ago.	— St. Andrew, East.	F. 39, uterine hæmorrhage *
F. 2, small pox (not vaccinated) 11 days	F. 41, epileptic fits *	Delirium Tremens:—
F. 1, small pox (not vaccinated) 3 weeks	influenza 8 weeks	F. 47, (inquest), natural death—sudden from delirium tremens *
F. 1, variola (not vaccinated) 3 weeks	dropsy 2 weeks	Delirium Tremens, and Ramolisement:—
F. 5, small pox (natural—vaccinated 5 weeks ago) *	CAMBERWELL; Camberwell.	M. 48, delirium tremens. ramolisement of brain 4 days
In Small Pox Hospital, M. 19, small pox, confluent (unprotected) 31 days	M. 25 days, obstructed nostrils. influenza exhaustion 19 days	Intemperance:—
In Small Pox Hospital, F. 19, small pox, confluent 8 days	GREENWICH; East.	F. 33, (inquest—post, mort.), inflammation of the brain from drinking alcoholic liquors *
(unmodified) vaccinated young at Burford, Oxou—one cicatrix.	M. 66, influenza succeeded by chronic bronchitis and anasarca 4 months	M. 36 (inquest), excessive venous congestion of brain, heart, lungs, and stomach after drinking ardent spirits; (cause of congestion not clearly established).
In Small Pox Hospital, F. 21, small pox, confluent 11 days	— West.	Privation;—Want of Breast-milk; Inanition:—
(unmodified)—vaccinated young at Everley—one very small cicatrix.	M. 72, influenza 10 days	M. 5 weeks, inanition *
In Small Pox Hospital, F. 26, small pox, confluent (unprotected) 7 days	LEWISHAM; Sydenham.	M. 4 months, catarrh 21 days
F. 4, small pox *	F. 84, general decay—influenza—debility *	exhaustion from deficient supply of breast-milk *
F. 11, small pox *	NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending March 25th; for all returns in which it is named, though in complication with other forms of disease, have been classed under this epidemic.	Purpura:—
F. 11, small pox *	Syphilis:—	F. 71, derangement of liver and bowels—purpura 6 months
M. 9, small pox (not vaccinated) *	M. 6 months, congenital syphilis—marasmus *	M. 42, purpura hæmorrhagica *
M. 3, small pox (not vaccinated) 2 weeks	In University College Hospital, F. 24, (p. m.), secondary syphilis *	M. 2, purpura *
F. 7, small pox (not vaccinated) *	erysipelas 6 days	M. 50, disease of liver *
F. 9 months, teething; small pox (not vaccinated) no medical attendant *	peritonitis subacute *	purpura 2 months
M. 8 months, small pox (not vaccinated) 10 days	F. 18, bubo of left groin *	M. 66, purpura 3 weeks
F. 3, confluent small pox (not vaccinated) 14 days	erysipelas of lower part of trunk and thighs *	epistaxis 2 weeks
F. 32, confluent small pox 10 days	M. 15 weeks, syphilis 6 weeks	
not known whether vaccinated.	convulsion 3 weeks	
F. 5 months, small pox 7 days	Malformation:—	
vaccinated only two days previous to eruption.	F. 8 weeks, cyanosis 14 days	
M. 7 months, small pox (not vaccinated) 14 days	M. 3 days, (post mort.), unusual development of the ductus arteriosus congenital.	
M. 2, small pox (not vaccinated) 3 days	congestion of the brain 2 days	
no medical attendant.	F. 26 hours, spina bifida.	
F. 5 months, small pox, confluent 8 days	F. 15 weeks, malformation of palate—inanition.	
vaccinated on the day before eruption.	F. 6 weeks, spina bifida.	
M. 9 months, small pox (not vaccinated) *	convulsions 7 days	
M. 23, small pox 21 days	Hernia:—	
first attack—not vaccinated.	M. 71, strangulated internal hernia *	
M. 1, small pox (first attack—not vaccinated) 1 week	M. 14 weeks, (p. m.) strangulated colon beyond the cæcum, produced by a fold of small intestines 8 days	
F. 36, variola confusis (not vaccinated) 7 days	Diabetes:—No deaths classed under this head.	
F. 4 months, small pox (not vaccinated) 10 days	Stone:—	
Influenza:—	In St. George's Hospital, M. 72, stone in the bladder *	
PADDINGTON; St. Mary.	Childbirth:—	
M. 1, influenza and bronchitis 10 days	The time elapsing from commencement of labour to death should invariably be returned.	
KENSINGTON; Brompton.	F. 35, (ing.), peritoneal inflammation after parturition *	
F. 80, influenza 2 months ago	F. 21, puerperal fever 7 days	
gastro-enteritis 14 days	F. 20, childbirth 3 weeks	
ST. MARYLEBONE; All Souls.	puerperal remittent fever 12 days	
M. 11 weeks, influenza 2 days	F. 32, diarrhœa with fever 8 days	
— The Rectory.	after childbirth 5 days	
F. 38, influenza 5 weeks	F. 24, confinement 5 days	
— St. Mary.	puerperal peritonitis 3 days	
M. 77, old age.	F. 21, (past mort.) uterine phlebitis *	
Influenza 4 months	F. 30, childbirth 25 hours	
ST. PANCRAS; Camden Town.		
M. 1, bronchitis after influenza 4 weeks		
— Kentish Town.		
F. 10 weeks, influenza *		
— West.		
M. 84, inflammation of lungs—influenza *		
HACKNEY; South.		
M. 64, influenza—dropsy *		

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 6; other rupture of blood-vessels, 2; pulmonary apoplexy, 1; spasm of thorax, 1; disease of the heart, 2; purpura peritonitis, 1; intemperance, 2; violence, 30; other specified causes, 19; "found dead," "natural death," "visitation of God," &c., 14—TOTAL, 78 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 33.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 1st April, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS
SUN.	The instruments were examined at noon, 6h. p.m., and at midnight; nothing was shewn at any of these times.	The sky was overcast till 10h. p.m. and clear afterwards; cirrostratus and scud. Rain was falling heavily between 6h. 30m. p.m. and 9h. 20m. p.m.
MON.	Positive and tension weak at 6h. a.m. and at 6h. p.m. Nothing was shewn at any other time.	The sky was generally overcast throughout the day; cirrostratus and scud. From 6h. 30m. p.m. till 10h. p.m. rain was falling.
TUES.	Nothing was shewn till 3h. p.m. Positive and tension moderate till 6h. p.m., negative and active at midnight.	The sky was overcast till 7h. a.m., about one-third covered till 4h. p.m., and overcast afterwards; cumuli, cirrostratus and scud. Rain was falling heavily from 6h. a.m. till midnight.
WED.	Nothing was shewn till 3h. p.m. Positive and tension weak afterwards.	The sky was overcast till 9h. a.m., from this time till 7h. p.m. the amount of cloud was variable, and overcast afterwards. Cumuli, cirrostratus and scud. Rain was falling from 6h. a.m. to 7h. a.m. A fine solar halo was visible during the afternoon.
THURS.	Nothing was shewn till 2h. p.m. Positive and tension weak afterwards.	Three-fourths of the sky were covered till 7h. a.m., overcast till 4h. p.m., and the amount of cloud was variable till near midnight, at which time it was nearly cloudless.
FRID.	At 3h. p.m. and at 6h. p.m. positive and moderate tension. Nothing was shewn at any other time.	The sky was generally overcast till noon, the amount of cloud was variable till 5h. p.m., and nearly cloudless afterwards. Cumuli, cirrostratus and scud.
SAT.	Nothing was shewn till noon. Positive and tension moderate during the remainder of the day.	The sky was generally cloudless throughout the day. Thunder was heard between 5h. and 3h. 15m. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flat glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. The former of these instruments was out of repair during a part of the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. These instruments have not been in use during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 45.1; and the mean reading at 7h. 30m. p.m. was 57.2; and the mean readings at the Royal Observatory for the same times were 45.3 and 55.2 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING APRIL 1, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, March 26, the temperature of the air early in the morning was 40.5; this value increased to 55° by 1h. p.m., and then decreased to 46° by midnight. On Monday the temperature early in the morning was 43°; it increased to 58° by 3h. p.m., and decreased to 47° by midnight. On Tuesday the temperature was 43° early in the morning; during the interval between 2h. p.m. and 3h. p.m. it was 56°; and it decreased to 45° by midnight. On Wednesday, till 6h. a.m. the temperature was 45°; it then began to increase, and it was 61° at 4h. p.m., and at midnight was 38°, the value having decreased 23° within the preceding 8 hours. On Thursday the temperature at 7h. a.m. was 45°; this value increased to 61° by 3h. p.m., and decreased to 45° by midnight. On Friday the temperature had increased to 53° by 7h. a.m.; to 67° by 1h. p.m.; and at 2h. 30m. p.m. it was 71.5, being the highest value during the quarter ending this day; at midnight the reading was 46°. On Saturday, April 1, the temperature early in the morning was 40°; this value increased rapidly till 3h. p.m., when it had reached 73°, and after this time it decreased, and was 48° at midnight.

The highest reading of the thermometer during the week was 73°, and the lowest was 38°; the range of temperature during the week was 35°.

The reading of the barometer has been somewhat below its average height, but the changes in its value have been as usual.

The average temperature of the air for each day was as follows:—

Sunday, 47.8; Monday, 50.5; Tuesday, 49.5; Wednesday, 49.2; Thursday, 53.0; Friday, 55.8; and Saturday, 56.90.

The difference of temperature during each day was as follows:—

Sunday, 14.5; Monday, 15°; Tuesday, 13°; Wednesday, 22.5; Thursday, 16.0; Friday, 31.5; and Saturday, 32.0.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 42.5; Monday, 45°; Tuesday, 40.5; Wednesday, 42.5; Thursday, 47.0; Friday, 47.5; and Saturday, 51.5.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 3.3gr.; Monday, 3.3gr.; Tuesday, 3.1gr.; Wednesday, 3.3gr.; Thursday, 3.8gr.; Friday, 3.9gr.; and Saturday, 4.4gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending April 1.	In the Years,							Excess or Deficiency in the week ending April 1, above or below that in the years*						Excess in the year 1848

TOTAL				

56 DEATHS.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 13.

(The tabular abstract on the first page is for the week ending Saturday, April 8th. The following selection of cases is made from the Returns for the week ending April 1st.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued)	duration
In St. George's Hospital, labourer (age not known), fractured skull, pelvis, and thigh, by falling from a scaffold when at work at Bridgewater House	45 minutes	F. 1, natural death, from a fall, how caused unknown.		M. about 40, accidental injuries from falling down the hatchway of the "Hebe," hulk, off Woolwich	1 hour
M. 26, accidental rupture of blood-vessels of the brain, whilst wrestling with Henry Peacock during intoxication—died directly after a fall in the struggle.		In London Hospital, mariner, 16, accidental by a fall, and wound on the back by a spike and fractured thigh	2 days	In St. George's Hospital, labourer, 36 (post mort.), fracture of the base of the skull—struck by battens which he was carrying on his shoulder in the Commercial-road—the weight overpowering, throwing him down and falling on him	12 days
M. 52, fall from a step-ladder placed on a lead flat, when cleaning windows—had rheumatism of the feet	*	In London Hospital, sailor, 44, injured head by a fall down a ship's hold—how caused no evidence to shew	*	In London Hospital, labourer, 47, accidentally knocked down by a bale of wool, causing paralysis of the spine	*

F. 35, laudanum, whether taken medicinally or to commit suicide unknown	*
M. attired to a goldsmith, 21, (post mort.), suicide by corrosive sublimate in temporary insanity	3 days
Single woman, 20, poisoning by arsenic, no evidence how or when taken	*

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:— duration

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.	
M. 2, small pox (not vaccinated)	10 days
M. 2, variola (not vaccinated)	13 days
In Small Pox Hospital, M. 20, small pox, confluent (unprotected)	26 days
hospital fever	7 days
In Small Pox Hospital, M. 30, small pox, confluent (unprotected)	6 days
In Small Pox Hospital, F. 35, small pox, confluent, hæmorrhagic	5 days
vaccinated young at Homerton (one good cicatrix)	*
F. 10, small pox, typhus	2 weeks
F. 9 months, variola	10 days
F. 4, variola confluent (not vaccinated)	*
F. 1, variola (not vaccinated)	*
F. 5, small pox (vaccinated)	*
M. 2, diarrhœa	14 days
variola confluent	5 days
F. 9, variola	14 days
F. 1, small pox	12 days
vaccinated at 3 months old	*
M. 4 months, variola (not vaccinated)	2 weeks
F. 4 months, variola	*
M. 27, small pox (not vaccinated)	13 days
M. 7, suppressed small pox (not vaccinated)	*
F. 24, small pox (not vaccinated)	7 days
M. 23, confluent small pox	8 days
F. under 1, small pox	12 days
F. 4 weeks, small pox (natural)	*
M. 2, small pox (not vaccinated)	4 weeks
F. 3, small pox	3 weeks
(inquest,) no medical attendance	*

Syphilis:—

F. 4 months, syphilis	from birth
M. 3 months, syphilis, congenital	*
In Dreadnought Hospital, M. 21, (p. m.), bubo incised	20 days
erysipelas of wound	11 days
erysipelas of face	6 days
pneumonia of right lung	5 days

Malformation:—

F. 2 days, (post mort.), cyanosis—congestion of the brain	*
F. 1, cyanosis	from birth
pertussis	*
F. 11 days, spina bifida	*

Hernia:—

In St. Bartholomew's Hospital, M. 71, strangulated hernia	5 days
In London Hospital, M. 57, strangulated hernia	*

Diabetes:—

M. 25, diabetes	7 weeks
---------------------------	---------

Stone:—No deaths registered from this cause.

Childbirth:— duration

The time elapsing from commencement of labour to death should invariably be returned.	
F. 35, puerperal mania	6 days
peritonitis, and exhaustion of nervous energy	*
F. 33, childbirth	9 days
puerperal fever	6 days
F. 21, childbirth	5 days
puerperal fever	3 days
F. 23, puerperal peritonitis	5 days
death on 9th day after delivery	*
F. 25, puerperal fever	7 days
F. 39, puerperal peritonitis	2 days
F. 36, puerperal peritonitis	7 days
F. 30, puerperal fever	1 week
F. 21, puerperal fever	4 days
F. 22, puerperal fever	3 days
F. 27, puerperal peritonitis	5 days
F. 29, puerperal fever	*
F. 23, puerperal fever	9 days
F. 19, childbirth	3 days
puerperal fever	2 days
F. 22, miscarriage	7 days
fever with partial enteritis	3 days
F. 35, (p. m.), puerperal peritonitis 6 days after delivery	*
F. 25, childbirth	*
puerperal fever	5 days
peritonitis	4 days
F. 34, childbirth—exhaustion from uterine hæmorrhage	*
F. 27, childbirth	3 weeks
erysipelas	14 days

Erysipelas and Miscarriage:—

F. 43, erysipelas of head	10 days
miscarriage	6 days
inflammation of bowels	4 days

Delirium Tremens:—

F. 53, delirium tremens	1 year
naturally of weak constitution	*
M. 31, (ing.), natural death by the visitation of God—delirium tremens	*

Intemperance:—

F. 50, intemperance	13 months
F. 49, (inquest), excessive drinking of ardent spirits	*

Privation;—Want of Breast-milk; Inanition:—

In South District of West London, M. 36 (ing.) inflammation attacking his lungs which had been diseased by exposure and want	3 days
In Whitechapel, North, F. 50, (ing.), natural death accelerated by want and privation, caused by herself	*
M. pauper, about 51, (ing.), died in the street from cold, and want of proper nourishment	*
In St. Paul's, Deptford, labourer, 74, (inquest); bursting of the stomach after long starvation	*

Privation, &c., &c. (continued):— duration

M. 8 weeks, (inquest,) natural from convulsions produced by want of mother's milk	6 hours
F. 1, (inquest), natural death—atrophy and want of the mother's milk	*
F. 3 weeks, convulsions—want of breastmilk	*
F. 10 days, inanition and debility	10 days
Purpura:—	
M. 23, purpura hæmorrhagica	5 days
extending to mucous membrane of bronchi and intestines	*
Disease of Liver and Purpura:—	
M. 76, decay of nature—purpura hæmorrhagica	*
M. 46, disease of liver	*
ascites	28 days
purpura	*
Hæmorrhage, Hæmatemesis, &c.:—	
M. 47, hæmorrhage from rupture of a blood-vessel into the trachea	*
F. 3 weeks, rupture of a bloodvessel in the lungs, 1 day	*
M. 60, natural death from rupture of a blood-vessel	*
F. 64, (inquest), natural causes—rupture of a vessel internally	*
M. 29, hæmatemesis—cardiac and hepatic disease	about 17 weeks
Miscellaneous Cases:—	
F. 53, amaurosis	several years
general decay	*
In St. George's Hospital, M. 37, (post mort.) ulceration of cartilages of knee	1 year
amputation	*
secondary deposits in lungs	14 days
In St. George's Hospital, M. 9, scrofulous disease of knee joint	4 years
amputation; typhoid fever	14 days
F. 43, ovarian dropsy	6½ years
relieved by tapping 61 times	*
Labourer, 55, (inquest), typhus	6 days
occurring at a time when he was living in a house at Union Court on the Foundling Estate, fraught with the cause of typhus from want of drainage, ventilation, and cleanliness	*
At 12, Union Place, Saffron Hill, M. 3, scarlet fever	*
In the same house, a boy of 8 months, died of scarlet fever, and was registered in the week ending March 18th. It is situated near the Old Fleet Ditch, from which offensive smells arise	*
M. 27, disease of knee joint	from birth
amputation	*
In St. Thomas' Hospital, F. 70, fungoid tumour on the scalp	30 days before death
symptoms of jaundice	*
F. 4, erysipelas	6 days
diarrhœa	2 days
after operation for diseased elbow	*

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 21; pulmonary apoplexy, 2; hæmorrhage, 2; disease of heart, 13; angina pectoris, 1; intemperance, 1; privation, 6; violence, 82; other specified causes, 37; "found dead," "natural death," "visitation of God," &c., 51—TOTAL, 216 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 76.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 8th April, 1848.

Day. — 1848	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers								Difference between the mean Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the temperature of the same day on an average of 25 years	Wind as deduced from Osler's Anemometer.						Mean Amount of Cloud, 0-10	Rain in inches, read at midnight						
			Dry			Dew Point	Highest in the sun, as shown by a self-register- ing Thermometer read at midnight	Lowest on the grass, as shown by a self-register- ing Thermometer read at midnight	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean from 6 Diffs.	Greatest	Least		General Direction		Pressure in lbs. on the square foot		Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive and tension moderate at each examination.	The sky was generally cloudless throughout the day.
MON.	Positive and tension variable throughout the day.	Three-fourths of the sky were covered between 4h. 20m. and 7h. a.m.; with the exception of a few light clouds that prevailed occasionally during the remainder of the day it was generally cloudless afterwards; cirrostratus, cumulostratus, and scud.
TUES.	Positive with strong tension at 9h. a.m. and at noon. At other times nothing was shewn.	The sky was one-third covered till 4h. p.m. and generally cloudless afterwards; thin cirrostratus and scud. The upper arc of a solar halo was visible during the morning.
WED.	Positive with variable tension. Occasionally nothing was shewn.	The sky was overcast throughout the day; thin cirrostratus.
THURS.	Positive and tension weak between noon and 6h. p.m. Nothing was shewn at any other examination.	The sky was overcast till noon; three-fourths were covered between noon and 6h. p.m., and it was clear afterwards; cumuli, cumulostrati and scud. Rain was falling between 6h. and 6h. a.m.
FRI.	At 6h. a.m. and at noon nothing was shewn. Positive and tension moderate at other times except at midnight when it was negative and very active.	The sky was generally overcast throughout the day, cirrostratus and scud. Showers of rain and hail were falling occasionally during the afternoon; from 8h. p.m. till midnight rain was falling steadily.
SAT.	Negative with variable tension at 9h. a.m. 6h. p.m. and midnight. At other examinations nothing was shewn.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling occasionally during the morning and heavily during the evening.

The height of the cistern of the barometer is considered to be 155 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. The anemometer has been under repair during part of the week.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. These instruments have not been in use during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 45.3; and the mean reading at 7h. 30m. p.m. was 53.9; the mean readings at the Royal Observatory for the same times were 43.9 and 53.1 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING APRIL 8, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, April 2, the temperature of the air early in the morning was 40°; this value increased to 73°·5 by 3h. p.m., and decreased to 47° by midnight. On Monday, the temperature early in the morning was 41°; by 9h. a.m. it had increased to 62°; at noon it was 71°, and at 2h. 30m. it was 75°, this was the highest value reached during the week; at midnight the value was 53°. On Tuesday, early in the morning, the temperature was 45°; this value increased to 74°·5 by 3h. p.m., and decreased to 55° by midnight. On Wednesday, the temperature early in the morning was 48°, this value increased to 63° by 2h. p.m., and decreased to 49° by midnight. On Thursday, at 7h. a.m. the temperature was 42°; at 3h. p.m. it was 51°·5, and at midnight it was as low as 34°·5, and this value still decreased to 33°·0 early in the morning of Friday; this value was the lowest in the week. The highest value reached on Friday was 49°·5 at 2h. p.m., it then decreased to 39° by midnight. On Saturday, till 8h. a.m. the temperature was 39°, it then slowly increased to 45° by 2h. p.m., and decreased to 39° by midnight. The range of temperature during the week was 42°.

The reading of the barometer this week has again descended to a low point; during the first three days of the week, its reading was somewhat above the average height, but the usual diurnal changes took place. During the last four days the reading has decreased. On Tuesday, at about noon, the highest value during the week was reached, viz. 30.10 in., at midnight on this day it had decreased to 30.08 in.; at midnight, on Wednesday, it was 29.74 in.; at midnight on Thursday it was 29.70 in.; at midnight on Friday it was 29.43 in.; on Saturday at 7h. a.m. it was 29.35 in., when it turned to increase, and at midnight was 29.48 in.

The average temperature of the air for each day was as follows:—

Sunday, 57°·2; Monday, 59°·7; Tuesday, 59°·8; Wednesday, 55°·5; Thursday, 41°·3; Friday, 41°·3; and Saturday, 42°·0.

Thus the mean temperature suddenly fell from 16° above to 4° below the average. On Monday and Tuesday it was 59° each day. On Friday it was 41°·3. The temperature of the air on Monday was 75°, and on Friday morning it was 33°.

The difference of temperature during each day was as follows:—

Sunday, 32°·5; Monday, 30°·5; Tuesday, 29°·5; Wednesday, 15°; Thursday, 19°·5; Friday, 16°·5; and Saturday, 6°·0.

Thus the range of temperature during the days at the former part of the week exceeded 30°, and on Saturday it was 6° only.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 50°·0; Monday, 49°·0; Tuesday, 49°·1; Wednesday, 46°·0; Thursday, 35°·5; Friday, 36°·0; and Saturday, 36°·5.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 4.3 gr.; Monday, 4.2 gr.; Tuesday, 4.2 gr.; Wednesday, 4.2 gr.; Thursday, 2.6 gr.; Friday, 2.7 gr.; and Saturday, 2.7 gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending April 8.	In the Years,							Excess or Deficiency in the week ending April 8, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	40.9	50.1	42.0	43.9	45.9	46.3	51.4	+10.5	+1.3	+9.4	+7.5	+5.5	+5.1	6.6
Temperature of the Dew Point	34.8	46.6	35.3	36.9	41.9	18.8	43.1	+8.3	—3.5	+7.8	+6.2	+1.2	+4.3	4.1
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	2.6	3.8	2.7	1.9	3.3	3.0	3.5	+0.9	—0.3	+0.8	+1.6	+0.2	0.5	+0.6

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, April 8, was 10°·5 above the temperature of the corresponding week of 1842.

During the Week ending Saturday, April 15th, 1848.

[No. 15.]

5 Springs.		Deaths		Births	
Weekly Average derived from Deaths of 1843-4-5-6-7, and corrected for increase of Population		registered in the Week		registered in the Week

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 14.

(The tabular abstract on the first page is for the week ending Saturday, April 15th. The following selection of cases is made from the Returns for the week ending April 8th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued)	duration	Wounds:—	duration
M. 34 (no inquest) erysipelas of the head and face supervening on a scalp wound, the result of a fall	*	Sou of a lodging-house-keeper, 8, injuries of the head either from a fall on the road, or from a blow received from a horse and cart which he was trying to escape when crossing.....	*	In Gny's Hospital, butcher, about 72, cutting his throat with a razor (at Martin-street, Southwark), in temporary insanity	4 days
In Guy's Hospital, fellowship-porter, 52 (p.m.), inflammation of the lungs from fractured ribs, by falling into the hold of a schooner at Davis' wharf, Southwark	5 days	M. 79 (no inquest, post mort.), fracture of the thigh	*	In Guy's Hospital, M., assistant to a dry-salter, 34, cutting his throat with a razor at Miles'-lane, London, in Temporary insanity.....	2 days
In St. Thomas' Hospital, miller, 43 (post mort.), erysipelas from a scalp wound by a fall in High-street, Borough.....	3 weeks	sloughing of the nates	2 months	In Hospital, Woolwich (no inquest), M. 20, wound of leg.....	*
erysipelas	5 days	Query—How was the fracture caused?		erysipelas	9 days

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Drowning:—	duration	Drowning (continued):—	duration	Poison:—	duration
In the Serpentine River, F. servant, 17, suicide by drowning in temporary insanity (in water about 2 minutes.)		M. (unknown) about 35, found drowned in the Thames—no marks of violence—much decomposed—no proof how he came into the water (about 28 days in water).		F. 7 weeks (<i>post mort.</i>), inanition from want of proper nourishment—doubtful whether accelerated by congestion of the brain—supposed to be produced by Godfrey's cordial, which had been frequently administered (found dead in bed)	*
M. 28, accidentally drowned by falling from a barge into the River Lea (under water 5½ hours).		<i>Hanging and Suffocation:—</i>		In Middlesex Hospital, F. 31 (<i>no inquest</i>), phlebitis—glossitis rapidly fatal, said to have come on from opening a drain near her residence.	*
M. 21, accidental fall into the waters of the River Thames.		F. 16, suicide by hanging, when mentally deranged (suspended half an hour).		F. 35, laudanum; whether taken medicinally or to commit suicide unknown	*
M. superintendent of a picture gallery, about 68, drowned—but no evidence of the cause (found in the Thames at St. Olave, Southwark)—in water 2 or 3 weeks.		M. 1, choked accidentally while eating	sudden	M. 44 (<i>no inquest</i>), periostitis from the fumes of quicksilver, while occupied in silvering glass	*
M. (unknown) about 26, found drowned in the Thames, no marks of violence—greatly decomposed—no proof how he came into the water (in water 4 or 5 weeks.)		<i>Burns and Scalds:—</i>		In St. Thomas' Hospital, widow of a tailor, 39, taking laudanum, being of unsound mind (at Waterloo-road)	about 2 hours
M. (unknown) about 16, found dead in the Thames, apparently drowned—greatly decomposed—no marks of violence before death (from 5 to 8 weeks in water).		M. 83, burns of the back from his shirt tail taking fire as he (being in a feeble state) stood at the grate to dry it, in the absence of his wife and nurse	1 week	<i>Neglect:—</i>	
Son of a tailor, 9, drowned by falling into a sewer at Rotherhithe accidentally (in water 20 minutes.)		In Guy's Hospital, daughter of a waterman, 9, burnt by her clothes taking fire, whilst reaching to a mantlepiece (at Horsleydown)	2 months	In Somers' Town, F. 65 (<i>inquest</i>), effects of natural disease—and her discharge from the Workhouse only 5 days before death, was marked by circumstances of negligence and cruelty	*
		In Guy's Hospital, daughter of a hawker of fish, 4, burnt whilst drying her pinafore at the fire (at Camberwell)	6 hours		
		M. 5, accidental scalds by falling into hot water prepared for a bath to wash children,	19 hours		

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Hernia:—	duration	Intemperance, Privation, &c.:—No deaths in the abstract under any of these causes.
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		M. 10 weeks, (<i>post mort.</i>), hernia femoralis—convulsions	*	<i>Purpura:—No deaths classed in the abstract under this head.</i>
M. 11 months, variola (not vaccinated)	4 days	F. 72, (<i>post mort.</i>), strangulated hernia	48 hours	<i>Hæmorrhage, Hæmatemesis, &c.:—</i>
In one of M. 1, variola (not vaccinated)	9 days	F. 57, (<i>post mort.</i>), strangulation of colon by a ligature of the omentum	3 weeks	<i>duration</i>
family: M. 9, variola (not vaccinated)	7 days	F. 66, (<i>post mort.</i>), strangulated hernia	48 hours	F. 64, hæmatemesis
F. 10, variola (not vaccinated)	9 days	F. 58, strangulated femoral hernia	12 days	M. 46, (<i>inquest</i>), rupture of a vessel on the lungs
In Workhouse (St. Margaret, Westminster), F. 23, small pox	1 week	operation (but the intestine gangrenous) ..	8 days	F. 44, hæmatemesis
F. 5, small pox (unprotected)	2 weeks	<i>Diabetes; Stone:—No deaths classed in the abstract under either of these causes.</i>		<i>Miscellaneous Cases:—</i>
In Small Pox Hospital, M. 11, small pox, confluent	11 days	<i>Childbirth:—</i>		In St. George's Hospital, F. 50, (<i>post mort.</i>), amputation of breast for scirrhus
one very small cicatrix.		<i>The time elapsing from commencement of labour to death should invariably be returned.</i>		secondary abscesses in lung
M. 6 months, small pox	1 week	F. 29, puerperal fever	3 days	F. 3, (<i>post mort.</i>), laryngo-tracheitis
vaccinated	1 week	F. 27, inflammation on the 5th day after delivery.		tracheotomy
M. 7 months, small pox (not vaccinated)	7 days	F. 25, puerperal and rheumatic fever	*	Painter, 66, paralysis
M. 2, small pox	8 days	F. 24, (<i>post mort.</i>), phlebitis uteri	2 days	In King's College Hospital, F. 20, disease of head of femur
vaccinated at the age of 3 months.		peritonitis	*	erysipelas after operation
F. 3, small pox (not vaccinated)	1 month	<i>If this case occurred after childbearing, it should have been so reported.</i>		In St. Bartholomew's Hospital, M. 35, diseased knee joint—amputation—phlebitis
M. 3, small pox (not vaccinated)	10 days	F. 26, difficult parturition—uterine hæmorrhage	*	F. 36, ovarian tumour; dropsy
F. 9 months, variola, confluent	*	F. 42, childbirth	24 hours	tapped three times.
F. 10 months, small pox, first attack; (not vaccinated)	*	F. 30, exhaustion from difficult labour	5 days	M. 24, medullary sarcoma in the right leg—amputation—gangrene
F. 4 months, small pox (first attack, not vaccinated)	*	<i>The following case was received too late for insertion in the abstract:—</i>		In Dreadnought Hospital, M. 62, (<i>post mort.</i>), retention of urine from enlarged prostate
F. 4, variola	3 weeks	F. 25 (<i>inquest</i>), childbirth	23 days	(death in 13 days).
M. 4, small pox (not vaccinated)	7 weeks	pneumonia	14 days	sloughing of mucous membrane of bladder
F. 1, variola	3 weeks	<i>Phthisis and Childbirth:—</i>		In Dreadnought Hospital, M. 30, (<i>post mort.</i>), pneumonia of right lung
bronchitis	1 week	F. 38, childbirth	10 days	gangrene
<i>The following cases of small pox were received too late for insertion in the abstract:—</i>		phreutis	5 days	hæmoptysis
M. 25, small pox (vaccination doubtful)	*	F. 31, phthisis accelerated by confinement	*	hepatization and gangrene of right lung.
F. 3, variola (vaccinated twice ineffectually) ..	17 days	F. 22, phthisis	died 15 days after confinement	In Dreadnought Hospital, M. 20, (<i>post mort.</i>), influenza
<i>Syphilis:—</i>		<i>Delirium Tremens:—</i>		erysipelas
M. 3 months, syphilis	congenital	F. 45, delirium tremens	8 days	double pneumonia with grey hepatization.
In the Workhouse, Camden Town, F. 30, secondary syphilis	*	F. 32, delirium tremens	*	In Dreadnought Hospital, M. 24, (<i>post mort.</i>) typhus
F. 14 weeks, secondary syphilitic eruption and consequent marasmus	*			hæmoptysis and passage of blood from intestines
<i>Malformation:—</i>				enlargement and ulceration of Peyer's patches; pulmonary apoplexy.
M. 3 days (<i>post mort.</i>) malformation of lower bowel—imperforate anus.				
M. 3 days, malformations.				
M. 2 days, cyanosis.				
M. 4 days, malformation of the heart.				

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 2; hæmorrhage, 1; disease of heart, 1; neglect in case of a pauper, 1; violence, 22; other specified causes, 10; "found dead," "visitation of God," "natural death," &c., 8—TOTAL, 45 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 39.

NOTE.—In the week ending March 18th, a girl of 12 weeks was registered as having died suddenly "from fright caused to her mother by a mob," according to the verdict of a coroner's jury. Further information is supplied by the Registrar, (Hackney-road sub-district.) The shock was received by the child at the breast, and was stated by the mother to have been caused by the "turn or change of the milk," the consequence of having been frightened by a mob, who were passing by her house to hold a public meeting on a vacant piece of ground lately known as "Nova Scotia Gardens," she being aware that her husband and son formed a part of the tumultuous assemblage.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 15th April, 1848.

Day. — 1848	Phases of the Moon	Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers								Difference between the mean Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Negative and active at noon and at mid- night. Positive, with variable tension at other times.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling occasionally during the morning, and heavily from 6h. p.m. till midnight.
MON.	At 6h. a.m. nothing was shewn. Positive, with variable tension at other examinations, except at 3h. p.m., when it was negative and weak.	The sky was overcast till 7h. a.m., one half covered till 2h. p.m., and the amount of cloud was variable afterwards; cirrostratus and scud; at 10h. 30m. a.m. a solar halo of 2° radius was observed. Snow was falling between 6h. and 4h. a.m. Rain was falling during the afternoon.
TUES.	At 6h. a.m., noon, and at midnight, nothing was shewn. Positive and weak at other times.	The sky was overcast till 6h. a.m., and generally about one half covered till near midnight, when it became again overcast; cirrostratus and scud. Rain was falling from 9h. p.m. till midnight.
WED.	Negative and very active at noon, and at 6h. p.m.; at the former of these times sparks were frequent, and galvanic currents were shewn. Nothing was shewn at any other times.	The sky was mostly overcast till noon, and one half covered during the remainder of the day; cumuli, cirrocumuli, cirrostratus, and scud. Rain was falling from 6h. a.m. till 4h. a.m.
THURS.	Nothing was shewn till 9h. p.m. From 3h. p.m. till midnight negative and very active.	The sky was generally overcast throughout the day; cirrostratus and scud. Rain was falling from 4h. p.m. till midnight.
FRID.	Positive and tension weak at 6h. p.m. Nothing was shewn at any other time.	The sky was one half covered till 6h. p.m.; cloudless from this time till 11h. p.m., and the amount of cloud was variable afterwards; cumuli, cumulostrati, cirrostratus and scud. From 10h. to 10h. 30m., the moon was surrounded by a perfectly formed halo of 2° radius, and at 11h. 20m. by a corona in addition, exhibiting the prismatic colours.
SAT.	Positive with weak tension at 6h. a.m., 9h. a.m., and at midnight. Negative and very active at 6h. p.m. Nothing was shewn at any other times.	The sky was nearly overcast throughout the day; cirrostratus and scud. Rain was falling heavily from 3h. p.m. till 9h. p.m., and slightly afterwards.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. These instruments have not been in use during the week. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 41°8; and the mean reading at 7h. 30m. p.m. was 47°8; the mean readings at the Royal Observatory at 6h. a.m. and 6h. p.m. were 41°4 and 47°3 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING APRIL 15, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, April 9, the temperature of the air early in the morning was 35°·2; this value increased to 46°·0 by 2h. p.m., and decreased to 37° by midnight, and to 33° after midnight. On Monday the highest value reached was 50°·5 at 1h. 30m. p.m., and it decreased to 35° by midnight. On Tuesday, till 7h. a.m., the temperature was between 35° and 38°; at 2h. 30m. p.m. it was 51°9; and at midnight it was 43°. On Wednesday the temperature had increased to 51° at 8h. a.m.; it increased to 59° by 2h. 45m. p.m., and decreased to 48° by midnight. On Thursday till 10h. a.m. there was very little variation of temperature; at this time its value was 53°, which increased to 59° by 2h. 15m. p.m., and decreased to 43° by midnight. On Friday, early in the morning, the temperature was 37°·8, which increased to 53°·5 by 4h. p.m., and decreased to 37° by midnight. On Saturday, early in the morning, the temperature was 35°·5; at 2h. p.m. it was 53°·5; and at midnight it was 43°. The range of temperature during the week was 26°.

On Saturday, April 8, at midnight, the reading of the barometer was 29·48 in.; this value increased till 2h. p.m. on Sunday, when it was 29·62 in.; it then began to decrease, and at midnight was 29·51 in. During Monday the reading decreased, and at midnight was 29·33 in., but shortly afterwards it turned to increase, and at 3h. p.m. on Tuesday was 29·78 in., but at midnight it was 29·57 in. only. During the 12th and 13th the reading fluctuated about 29·6 in. On the 14th it increased to 30·08 in. by midnight. On Saturday, the 15th, at 9h. a.m., the reading was 30·01 in., and which value decreased to 29·93 in. by midnight.

The average temperature of the air for each day was as follows:—
Sunday, 40°·6; Monday, 41°·7; Tuesday, 43°·5; Wednesday, 52°·0; Thursday, 51°·0; Friday, 45°·2; and Saturday, 43°·5.

The difference of temperature during each day was as follows:—
Sunday 10°·8; Monday, 17°·5; Tuesday, 19°·9; Wednesday, 14°·0; Thursday, 14°·0; Friday, 16°·5; and Saturday, 20°·0.

The average temperature of the Dew Point for each day was as follows:—
Sunday, 33°·9; Monday, 33°·5; Tuesday, 36°·5; Wednesday, 44°·5; Thursday, 45°·0; Friday, 35°·5; and Saturday, 38°·0.

The average weight of water mixed with a cubic foot of air was as follows:—
Sunday, 2·5 gr.; Monday, 2·5 gr.; Tuesday, 2·3 gr.; Wednesday, 3·5 gr.; Thursday, 3·6 gr.; Friday, 2·5 gr.; and Saturday, 2·9 gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending April 15.	In the Years,							Excess or Deficiency in the week ending April 15, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	39·9	39·5	51·1	41·3	49·6	45·5	45·3	+5·4	+5·8	—5·8	+4·0	—4·3	—0·2	+0·8
Temperature of the Dew Point	33·1	34·4	43·5	36·6	45·4	37·1	38·1	+5·0	+3·7	+4·6	+1·5	—7·3	+1·0	+1·4
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	2·4	2·5	3·4	2·7	3·6	2·8	2·8	+0·4	+0·3	—0·6	+0·1	—0·8	0·0	—0·1

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, April 15, was 5°·4 above the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, April 22nd, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 15.

(The tabular abstract on the first page is for the week ending Saturday, April 22nd. The following selection of cases is made from the Returns for the week ending April 15th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions :—	duration	Fractures and Contusions (continued) :—	duration	Fractures and Contusions (continued)	duration
F. 3 (no inquest, post mort.) empyema and pneumothorax, caused by an injury to the chest from a fall down stairs	1 month	M. 85, found dead—injuries to the head caused by an accidental fall down a flight of stairs	*	In St. Bartholomew's Hospital, cork cutter, 29 (post mort.), injuries to his spine by falling down stairs, (at Mulberry-court, Moorfields)	9 days
In Westminster Hospital, large-builder, 37 (post mort.), rupture of duodenum and shock of system from a fall, no sufficient evidence how caused. Deceased fell upon some loose stones during a fight with another man, but the fall appeared to be occasioned solely by his own act	14 hours	F. 68, erysipelas of the head and face from a wound of the scalp, caused by being knocked down by a dog, which had been suddenly driven out of a butcher's shop for thieving	10 days	In St. Bartholomew's Hospital, wife of a carpenter, 72, old age and exhaustion from a fracture of her right thigh by a fall (at Paddington)	14 weeks
		F. 82 (no inquest), concussion of the brain from slipping on the stairs	6 weeks	F. 59 (no inquest) general debility from a fall ..	14 weeks
		failure of vital powers from old age.			

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Fractures and Contusions (continued):—	duration	Wounds (continued):—	duration	Drowning (continued):—	duration
M. 47, accidentally crushed to death by the falling in of a quantity of earth.		M. 65, cutting his throat with a table knife, in temporary insanity (found dead in his shop—supposed to have been dead about 2 days.)		M. 6, drowning—fell in reaching with a stick at a dangerous bank.	
Son of a gun polisher, 1, fracture and contusion of neck—fell from the foot pavement as an omnibus was passing, the wheel of which went over his neck.	instant	In St. Bartholomew's Hospital, messenger, 27, cutting his throat with a razor (at London Wall), in temporary insanity.	5 hours	M. 12, found dead without marks of violence—apparently drowned.	
In Westminster Hospital, widow of a domestic coachman, 74, mortification—commenced fracture of left leg and fracture of thigh—fell down and was run over by a brewer's dray (in Belvidere-road, Lambeth)	3 days	In St. Thomas' Hospital, porter, 30 (post mort.), rupture of a blood-vessel on the brain, and delirium tremens, caused by a wound on his head, but no evidence how it was inflicted.	5 days	Burns and Scalds:—	
In St. Bartholomew's Hospital, waggoner, 55 (post mort.), destruction of pelvis, and laceration of bowels, from having been run over by his employer's waggon, which he was driving up Holborn Hill	15 minutes	In Guy's Hospital, shoemaker, 33, cutting his throat with a knife, in a state of delirium, arising from fever (at Robertson's-place, Rotherhithe).	5 days	F. 72 (no inquest), taking fire—congestion of the brain	3 days
In St. Bartholomew's Hospital, retired underwriter, 72, compound fracture of left leg, from being accidentally run over by the wheels of a van, while crossing Princes-street, by the Bank of England	5 days	Drowning:—		In St. Bartholomew's Hospital, daughter of a chair-sawyer, 3, burnt by her clothes taking fire, when lighting a bit of paper (at Holywell-place, Shoreditch)	10 days
Wounds:—		Boat-boy, 14, drowning in the Paddington basin of the Grand Junction Canal—slipped in while pushing the tiller, when getting a barge out of the basin.		In St. Bartholomew's Hospital, son of a cooper, 2, scalded by the upsetting of a tea-kettle, containing boiling water (at Lower Rosamond-street, Clerkenwell)	24 hours
Son of a musician, 18, accidental shooting into the mouth—was blowing into the muzzle of a fowling piece, as though forgetful that he had not drawn the powder, with the percussion nipple close to a candle	instant	M. 20 or 30, suffocation from drowning—how he came into the water unknown.		Poison:—	
				M. 20 (no inquest), colica pictonum	10 days
				epilepsy.	*
				In Guy's Hospital, F., domestic servant, between 18 and 19 (post mort.), oxalic acid taken by herself, but no sufficient evidence that it was taken with an intention to destroy life	about 12 hours

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Malformation (continued):—	duration	Phthisis and Childbirth:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		M. 1 month, malformation of rectum.		F. 29, phthisis	9 months
F. 6, variola	3 weeks	M. 5 days, anus imperforatus.		childbirth	11 days
M. 2, small pox (not vaccinated)	10 days	Hernia:—		F. 33, consumption.	1 month after delivery
F. 5, small pox (not vaccinated)	12 days	In St. George's Hospital, F. 69 (post mort.), umbilical strangulated hernia	several years	Delirium Tremens:—	
In Small Pox Hospital, M. 24, small pox confluent (unprotected)	14 days	operation	6 days	M. 29, delirium tremens	7 months
In Small Pox Hospital, M. 19, small pox confluent (unprotected)	8 days	peritonitis	*	abscess in left lung	*
In Small Pox Hospital, M. 25, small pox, confluent, unmodified (vaccinated 8 years ago in America, no cicatrix)	*	suppuration in the sac	4 days	M. 39, delirium tremens	10 days
In Small Pox Hospital, M. 21, small pox, confluent (unmodified) vaccinated young at North Crawley—no cicatrix.		In St. Bartholomew's Hospital, F. 42, strangulated hernia—operation—peritonitis ..	*	F. 44, cirrhosis	6 days
M. 7 months, small pox (not vaccinated)	7 days	In London Hospital F. 64, strangulated hernia	4 days	delirium tremens	4 days
F. 1, retrocedent small pox	5 days	operation	4 hours	M. 33, epilepsy	2 days
F. 23 days, small pox	*	In Guy's Hospital, F. 42, hernia.	4 years	delirium tremens	11 days
F. 3 weeks, small pox (not vaccinated)	*	F. 77, hernia	14 years	M. 29, fever	6 days
M. 3, confluent small pox (not vaccinated) ..	7 days	strangulation and sloughing, with artificial anus	*	delirium tremens.	6 days
M. 11 months, small pox and diseased eyes ..	*	Diabetes:—		NOTE.—Of these cases of delirium tremens, two are enumerated under other heads in the abstract.	
strumous disease affecting skin and absorbent glands	6 months	M. 24, diabetes	4 months	Intemperance:—	
not vaccinated.		In Guy's Hospital, F. 47 (post mort.), diabetes—phthisis	*	F. 38, habitual intoxication	3 years
F. 1, small pox—natural (not vaccinated)	*	Stone:—		exhaustion	14 days
M. 1, small pox.	14 days	In Guy's Hospital, M. 2, stone—fits	*	Privation: Want of Breastmilk; &c.:—	
F. 23, small pox (vaccinated)	5 days	Childbirth:—		M. 11 weeks, general cachexia from bad feeding from birth	
F. 10 months, small pox (natural)	10 days	The time elapsing from commencement of labour to death should invariably be returned.		F. 5 weeks, convulsions	*
M. 10 weeks, small pox.	4 days	F. 38, childbirth.	24 days	want of breastmilk from birth.	
F. 7 weeks, small pox	*	puerperal fever.	*	M. 4, tabes mesenterica induced by bad air, and insufficient nourishment	17 weeks
Syphilis:—		F. 43, childbirth.	*	Purpura:—	
M. 3, syphilis	from birth	puerperal fever.	2 days	M. 62, purpura	*
F. 23, syphilis, influenza, diseased liver, jaundice, dropsy.	*	F. 34, puerperal and rheumatic fever	*	M. 68, purpura—fever	*
F. 4 months, syphilis	*	F. 42, phlegmasia dolens and splenitis, after parturition	2 months	Hæmorrhage, Hæmatemesis, &c.:—	
M. 8 months, congenital syphilis.		paralysis	5 days	F. 41, hæmorrhage from the lungs	34 hours
asthenia.	from birth	albuminuria existing throughout.		M. 27, hæmorrhage from the lungs	*
M. 6 weeks, syphilis	from birth	F. 32, pneumonia	7 months	Miscellaneous Cases:—	
M. 30 minutes, syphilis.	*	childbirth	16 days	In Westminster Hospital, F. 52, peritonitis after paracentesis	5 days
Malformation:—		pleuritis	12 days	cirrhosis—hydatid cyst	2 years
M. 12 days, imperforate urethra.		F. 42, hæmorrhage into the abdominal cavity, from rupture of a blood-vessel shortly after delivery	*	In Whitechapel North, F. 40, Asiatic cholera, (a widow admitted into the workhouse 5 days before death.)	5 days
aphtha	10 days	F. 39, general anasarca in pregnancy	5 months	In Dreadnought Hospital, M. 40 (post mort.), typhus	*
M. 4 months, anasarca, resulting from congenital malformation.		bronchitis	died on 5th day after delivery	bilious vomiting	4 days
		In Westminster Hospital, F. 21, general exhaustion following parturition	10 days	no ulceration of Peyer's patches—gall bladder distended and containing calculi.	

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 3; disease of the heart, 2; aneurism, 1; violence, 22; other specified causes, 9; "natural death," "visitation of God," "found dead," &c., 14—TOTAL, 51 cases.

THE NUMBER OF CASES in which it is reported that a Post MORTEM EXAMINATION was made, is 38.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 22nd April, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degree Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 25 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive and tension weak at 6h. p.m. Nothing was shewn at any other examination.	Three-fourths of the sky were covered till 6h. p.m. and the whole afterwards; cirrostratus, cumulostratus and scud. Rain was falling from 9h. p.m. till midnight.
MON.	Nothing was shewn till near noon. Positive and tension strong at noon and at midnight. Negative and very active during the afternoon and evening.	The sky was generally overcast till 7h. p.m. and clear afterwards; cirrostratus and scud. Heavy showers of rain were falling during the afternoon. Some streamers of an aurora borealis were visible during the evening.
TUES.	Nothing was shewn till 3h. p.m. Negative with variable tension afterwards.	From 6h. a.m. till 7h. a.m. about one-half of the sky was covered, and generally overcast during the remainder of the day; cirrostratus and scud. Heavy rain was falling during the afternoon and evening.
WED.	Positive and weak at 3h. p.m. and at midnight. Nothing was shewn at any other time.	Between 6h. a.m. and 9h. a.m. the sky was generally clear, but at other times the amount of cloud was very variable; cirrostratus, fleecy clouds and scud.
THURS.	Negative and very active at 3h. p.m. and at 6h. p.m. Nothing was shewn at any other examination.	One-third part of the sky was covered by cloud till 7h. a.m. and the whole was overcast during the remainder of the day; cirrostratus and scud. Rain was falling heavily during the afternoon and evening.
FRID.	Positive and weak at noon and at midnight. Nothing was shewn at any other time.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling at intervals between 4h. p.m. and midnight.
SAT.	Positive and tension weak at midnight. Nothing was shewn at any other time.	The sky was overcast throughout the day; cirrostratus. Rain was falling occasionally during the morning.

The height of the eastern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. On Wednesday, April 19, the instruments were replaced after repair. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 47.0; and the mean reading at 7h. 30m. p.m. was 51.5; the mean readings at the Royal Observatory at 6h. a.m. and 6h. p.m. were 46.1 and 51.0 respectively.

The general direction of wind for the first four days of the week was S.S.E., and N. for the last three.

REMARKS ON THE WEATHER DURING THE WEEK ENDING APRIL 22, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, April 16, the temperature of the air early in the morning was 40°; this value increased to 59° by 3h. p.m., and decreased to 47.5 by midnight. On Monday the lowest value in the morning was 47.0, this increased to 52° by 7h. a.m., and to 61° by 2h. p.m.; it then decreased to 45.2 by midnight. On Tuesday, early in the morning the temperature was 38.5; this value increased to 44° by 6h. a.m., and to 59° a little after noon; at midnight the reading of the thermometer was 48°. On Wednesday, early in the morning the temperature was 40°, this value increased to 48° by 7h. a.m., and after this it decreased to 53° before noon, and increased to 55° by 2h. p.m.; at midnight the reading was 49°. On Thursday, early in the morning the temperature was 46.5, this value increased to 54.5 by 6h. p.m., and decreased to 49° by midnight. On Saturday, till 8h. a.m., the temperature differed very little from 43°; this value increased to 52°, at 3h. p.m., and decreased to 45° by midnight.

The range of temperature during the week was 22°.5.

The readings of the barometer this week have been remarkable, considering the very low readings which have prevailed during the two preceding months. On Saturday, April 15, at midnight, the reading of the barometer was 29.93 in., and this value decreased almost constantly till the 18th, at midnight. On Sunday, at midnight the reading was 29.75 in. On Monday, at midnight it was 29.74 in. On Tuesday, at midnight it was 29.37 in.; on Friday, at midnight it was 29.53; and on Saturday, at midnight the reading was 29.62 in.

The average temperature of the air for each day was as follows:— Sunday, 49°.5; Monday, 53°.5; Tuesday, 49°.8; Wednesday, 49°.7; Thursday, 49°.5; Friday, 50°.9; and Saturday, 49°.2.

The difference of temperature during each day was as follows:— Sunday 19°.0; Monday, 15°.0; Tuesday, 20°.5; Wednesday, 19°.5; Thursday, 19°.0; Friday, 9°.0; and Saturday, 5°.5.

The average temperature of the Dew Point for each day was as follows:— Sunday, 45°.0; Monday, 44°; Tuesday, 44°.5; Wednesday, 43°.5; Thursday, 48°.0; Friday, 47°.5; and Saturday, 46°.0.

The average weight of water mixed with a cubic foot of air was as follows:— Sunday, 3.6gr.; Monday, 3.6gr.; Tuesday, 3.6gr.; Wednesday, 3.5gr.; Thursday, 3.9gr.; Friday, 4.0gr.; and Saturday, 3.8gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending April 22.	In the Years,							Excess or Deficiency in the week ending April 23, above or below that in the years*						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	45.7	51.5	53.1	46.3	46.6	44.9	50.0	+4.3	-1.5	-3.1	+3.7	+3.1	+5.1	-2.0
Temperature of the Dew Point	39.6	36.1	46.8	40.7	42.1	31.4	43.5	+5.9	-0.6	-1.3	+4.8	+3.4	+11.1	4.2
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	3.1	3.7	3.8	3.1	3.2	2.5	3.7	+0.6	0.0	-0.1	+0.6	+0.5	+1.2	0.5

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1843, April 22, was 4.3 above the temperature of the week ending 1842, April 22.

Births and Deaths registered in London,

During the Week ending Saturday, April 29th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 16.

(The tabular abstract on the first page is for the week ending Saturday, April 29th. The following selection of cases is made from the Returns for the week ending April 22nd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Hanging and Suffocation:—	duration	Burns and Scalds:—	duration
Son of a chair-maker, 15, compression and inflammation of the brain by a fall from a flight of stairs to the ground.....	3 days	M. 59, found dead—apparently having died from suspension, and with marks of violence—death how caused unknown.		Daughter of a stonemason's labourer, 3, accidentally burnt	*
Bricklayer, 23, concussion of the brain, with fracture of the skull from a fall off a viranda accidentally	7 days	M. (illegitimate child) 8 months, found smothered in a privy—how he came therein no evidence.		Neglect:—	
F. 82 (no inquest), old age, fracture of neck of thigh	2½ years			In City-road sub-district, M. 48 (inquest) death from ill-treatment and neglect—manslaughter against David Thompson, John Spotswood, and Bessy Spotswood.	

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HEMORRHAGE, HÆMATEMESIS, ETC.

<i>Small Pox:—</i>	<i>duration</i>	<i>Syphilis:—</i>	<i>duration</i>	<i>Delirium Tremens:—</i>	<i>duration</i>
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.					
1, variola	2 days	M. 2 months, syphilitic eruption	*	M. 43, delirium tremens	*
2, variola	3 weeks	F. 34, syphilis	*	<i>Epilepsy and Delirium Tremens:—</i>	
Small Pox Hospital, M. 24, small pox, confluent (severe)	26 days	F. 25, syphilis	*	F. 47, epilepsy	4 days
hospital gangrene	10 days	small pox—sloughing of vagina	7 weeks	delirium tremens	*
vaccinated young, at Kensington, 2 good cicatrices.		M. 3 months, syphilitic eruption	from birth	<i>Intemperance:—</i>	
Small Pox Hospital, M. 11 weeks, small pox, confluent (unprotected)	8 days	<i>Malformation:—</i>		No deaths enumerated under this head in abstract.	
Small Pox Hospital, F. 15, small pox, confluent (unprotected)	11 days	F. 10 days, low vitality.		<i>Privation:—</i>	
Small Pox Hospital, F. 30, small pox, confluent (severe)	29 days	spina bifida	before birth	No deaths enumerated under this head in abstract.	
crisipelas and hospital fever	10 days	M. 3 weeks, defective palate	congenital	<i>Want of Breast-milk; Sc.:—</i>	
vaccinated young at Hallsworth, 3 good cicatrices.		F. 6 hours, cyanosis.		F. 6 weeks, marasmus from want of breast-milk	*
5, variola—tracheitis	9 days	<i>Hernia:—</i>		F. 3 months, convulsions	2 months
3 months, variola	9 days	In University College Hospital, F. 48 (post mort.), strangulated femoral hernia	*	want of breast-milk	from birth
3, confluent small pox (not vaccinated)	*	operation	49 hours	M. 7 months, marasmus from want of breast-milk	*
purpura	*	M. 65, strangulated intestine	7 days	<i>Purpura:—</i>	
9 months, small pox (14 days after vaccination.)	14 days	F. 4 days, tumour of the umbilicus and hernia.		In Royal Free Hospital, M. 15, purpura hæmorrhagica	29 days
1, small pox (natural)	8 days	M. 37 (post mort.), incarcerated intestine, caused by omentum.	1 week	<i>Hæmorrhage, Hæmatemesis, Sc.:—</i>	
vaccinated when 3 months old; no medical attendant.		<i>Diabetes:—</i>		F. 40, menorrhagia	3 weeks
2, small pox	13 days	In Guy's Hospital, M. 17, diabetes	*	<i>Miscellaneous Cases:—</i>	
3, pneumonia, following confluent small pox, (not vaccinated)	*	<i>Stone:—</i>		At Shepherd's Bush, Hammersmith, three deaths of children of 4 years and under, from "cynanche trachealis and brouchitis," occurred within a few yards of each other; two within 5 days in the same family. The duration of illness was, in two cases, 48 hours, and in the third, did not exceed 36 hours. The cottages where these children lived have been built only a short time, are very damp, and situated in a locality which is wet, and entirely without drainage.	
1, variola conflens (not vaccinated)	11 days	<i>Childbirth:—</i>		F. 1, erysipelas after vaccination	3 weeks
7, small pox (after vaccination)	26 days	The time elapsing from commencement of labour to death should invariably be returned.			
3 months, small pox (not vaccinated)	1 week	F. 29, exhaustion from hæmorrhage after childbirth	6 weeks	In Bethnal-green (Town Sub-district), two persons, husband and wife, the former 49, the latter 44 years, died of "continued fever," the duration of which, in both cases, was 9 days; petechiæ appeared in both cases 2 days before death.	
2, small pox (not vaccinated)	2 weeks	F. 24, childbirth	7 days	In Dreadnought Hospital, M. 20 (post mort.), typhus	3 weeks
7 months, small pox (not vaccinated)	11 days	enteritis	4 days	hæmorrhage from intestines	about 18 hours
3, variola	11 days	F. 32, childbirth	4 days	ulceration of large and small intestines.	
laryngitis	3 days	placenta prævia; hæmorrhage moderate, delivered by turning.		In Dreadnought Hospital, M. 45 (post mort.), phthisis	*
2, small pox (not vaccinated) 1st attack	*	peritonitis	2 days	typhus	25 days
2, variola	4 days	exhaustion	*	erysipelas, diarrhœa	20 days
laryngitis	3 days	F. 21, puerperal convulsions	16 days	large cavities in both lungs, and ulceration of large and small intestines.	
11 months, inflammation and ulceration of the elbow joints after small pox (not vaccinated)	*	brouchitis	4 days		
22, confluent small pox (not vaccinated)	10 days	F. 27, puerperal fever	*		
2, small pox (not vaccinated)	*	hepatitis	6 days		
1, small pox (not vaccinated)	*	F. 30, puerperal fever—debility	16 days		
See cases of Syphilis.		<i>Phthisis and Childbirth:—</i>			
		F. 32, phthisis	7 months		
		delivery	3 days		

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 2; pulmonary apoplexy, 1; disease of the heart, 1; violence, 5; other specified causes, 7; 'found dead,' "natural death," "visitation of God," &c., 4—TOTAL, 20 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 33.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 29th April, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive and tension, moderate at each examination.	The clouds were slightly broken between 9h. and 10h. a.m.; with this exception, the sky was overcast throughout the day. A misty rain was falling near midnight.
MON.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling at frequent intervals.
TUES.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. A thin rain was falling during the afternoon.
WED.	Negative with weak tension at 9h. a.m., at 5h. p.m. and at 6h. p.m. positive and tension moderate. Nothing was shewn at any other times.	One-fourth of the sky was covered with cloud till 6h. a.m., from this time till 7h. p.m. it was generally overcast, and nearly clear afterwards. Cumulostratus, cirrostratus, and scud.
THURS.	Positive and tension variable from noon till 6h. p.m. Nothing was shewn at any other examination.	At 6h. a.m. and at midnight the sky was cloudless, and about three-fourths covered at other times; cumuli, cirrostratus, and scud. Rain was falling at intervals during the afternoon.
FRID.	Negative, and at times very active during the morning. At noon nothing was shewn. Positive and tension moderate during the remainder of the day.	The sky was overcast till 4h. p.m., three-fourths covered till 5h. p.m., and the amount of cloud was variable afterwards. Cumuli, cirrocumuli, cirrostratus, and scud. Rain was falling steadily during the morning.
SAT.	Positive and tension moderate at 6h. a.m. Nothing was shewn during the remainder of the day.	The sky was overcast till noon, three-fourths were covered till 5h. p.m.; it was generally clear afterwards; cumuli, cirrostratus, and scud.

REMARKS ON THE WEATHER DURING THE WEEK ENDING APRIL 29, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, April 23, the temperature of the air early in the morning was 44°; this value increased to 56.0° by 10h. 45m., and decreased from this time to midnight, when it was 45°. The day was cold and gloomy. On Monday the temperature was 40° early in the morning; this increased to 49° by 1h. p.m., and decreased to 41° at midnight. On Tuesday morning the temperature was 39.8°; at 2h. p.m. it reached to 45°, and decreased to 40° at midnight, and to 34° after midnight. On Wednesday, at 6h. a.m., the temperature was 36°; at 3h. p.m. it had increased to 55°, and it decreased to 35.5° by midnight, and to 29° after midnight. On Thursday at 6h. a.m. it was 32°, at 8h. a.m. it was 41°; this value increased to 53° between 1h. p.m. and 2h. p.m., and decreased to 40° at midnight. On Friday, early in the morning, the temperature was 34°, and at 7h. a.m. it was 42°, between 8h. a.m. and noon a steady rain was falling, and the temperature scarcely varied from 41°; at 1h. p.m. it was 44°; at 3h. p.m. it was 52°, and at midnight it was 40°. On Saturday, early in the morning, the temperature was 31.5°; this value increased to 39° by 6h. a.m.; to 47° by 9h. a.m., and 52.5° by 1h. 30m. p.m.

The range of temperature during the week was 27°. The reading of the barometer has been rather low. From Sunday to Thursday its oscillations were small, and about the reading 29.70 in. on Sunday and Monday; about 29.90 in. on Tuesday and Wednesday; on Thursday the reading decreased 0.15 in., and on Friday the reading increased between 6h. a.m. and midnight, amounting to 0.17 in., and on Saturday the reading reached 30 inches.

The average temperature of the air for each day was as follows:—Sunday, 50° 7; Monday, 44° 5; Tuesday, 42° 5; Wednesday, 44° 5; Thursday, 41° 0; Friday, 43° 5; and Saturday, 42° 0.

The difference of temperature during each day was as follows:—Sunday 11° 5; Monday, 9° 0; Tuesday, 6° 0; Wednesday, 21° 0; Thursday, 21° 0; Friday, 17° 0; and Saturday, °.

The average temperature of the Dew Point for each day was as follows:—Sunday, 44° 5; Monday, 42° 0; Tuesday, 37° 0; Wednesday, 38° 0; Thursday, 35° 5; Friday, 35° 5; and Saturday, 36° 0.

The average weight of water mixed with a cubic foot of air was as follows:—Sunday, 3.6 gr.; Monday, 3.3 gr.; Tuesday, 2.8 gr.; Wednesday, 2.8 gr.; Thursday, 2.5 gr.; Friday, 2.6 gr.; and Saturday, 2.7 gr.

The following Table shews the comparative Meteorology since the year 1811.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 17.

(The tabular abstract on the first page is for the week ending Saturday, May 6th. The following selection of cases is made from the Returns for the week ending April 29th.)

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Hanging and Suffocation:—	duration	Poison:—(continued):—	duration
Labourer, 38, injury of the brain—had got into the ascending part of a fire-escape, not placed against a wall, and on being elevated over-weighed the machine, which fell to the ground	6 hours	M. 20, hanging himself with a silk handkerchief to a wire window guard in a cell at Bow-street police station, when insane	a few minutes	Commercial traveller, 39, effects of a deadly poison called laudanum; how administered unknown.	
F. 2 (no inquest), a fall	4 months	Cabinet-maker, 52, hanged himself in a state of temporary insanity.		In Hackney-road, sub-district of Bethnal-green, horsehair-manufacturer, 21, natural death, accelerated by the noxious vapours of a privy, and the insufficient drainage of the neighbourhood.	*
Daughter of a chair-maker, accidental death from a fall of the mother, causing concussion of the brain	*	Scalds:—		In St. Thomas' Hospital, spice-bleacher, 18 (no inquest), phthisis—miliary tubercles and many very small cavities dispersed—pneumonia from exposure to chlorine in his occupation	4 weeks before admission
Wounds:—		Son of a coal-whipper, 2, accidental death from scalds.	*	Surgeon, 26, suicide with prussic acid (unsound mind from excessive drinking of ardent spirits.)	
Single woman, 27 (post mort.), effusion of blood into the pericardium and cavity of chest—stabbed with a clasp knife, wounding left lung, pericardium, and pulmonary artery (wilful murder by William Tomkins)	instantly	Poison:—			
		Upholsterer, 61, suicide with hydrochloric acid (temporary insanity)	about 1 hour		

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

<i>Small Pox:—</i>	<i>duration</i>	<i>Small Pox (continued):—</i>	<i>duration</i>	<i>Phthisis and Childbirth:—</i>	<i>duration</i>
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.					
I. 4, small pox	*	M. 2, small pox (not vaccinated)	12 days	F. 30, childbirth	2 days
I. 2, variola	14 days	F. 4, small pox (first attack—not vaccinated)	24 days	phthisis	7 months
I. 1, variola	14 days	F. 9 months, small pox (not vaccinated) consumption	*	<i>Delirium Tremens:—</i>	
I. 2, small pox (not vaccinated)	*	F. 9, small pox (not vaccinated)	10 days	M. 58, delirium tremens	*
I. 2, small-pox (vaccination attempted 18 days ago without success)	*	<i>Syphilis:—</i>		M. 42, delirium tremens ..	10 days
I. 39, confluent small pox	9 days	M. 26, syphilitic ulceration of the throat—erysipelas	*	M. 47, delirium tremens	*
I. vaccinated successfully in infancy—re-vaccinated on 29th March last unsuccessfully—died on 20th April.		<i>Malformation:—</i>		<i>Intemperance:—</i>	
I. Small Pox Hospital, M. 23, small pox, confluent (unprotected)	19 days	M. 3 months, open foramen ovale—marasmus ..	*	F. 24 (inquest,) natural death accelerated by excessive drink	*
I. hospital gangrene	5 days	F. 3 days, malformation of the heart.		<i>Privation:—</i>	
I. Small Pox Hospital, M. 22, small pox, confluent (unprotected)	8 days	<i>Hernia:—</i>		NOTE.—In the abstract one case was erroneously placed to this head.	
I. hospital gangrene	4 days	No deaths placed to this head in abstract.		<i>Want of Breast-milk; Inanition, &c.:—</i>	
I. Small Pox Hospital, M. 13, small pox, semi-confluent, mild	14 days	<i>Diabetes:—</i>		F. 6 months, dry nursing	*
I. erysipelas of head and face	6 days	No deaths placed to this head in abstract.		M. 3 months, want of breast-milk—thrush ..	*
I. vaccinated some years ago at Westminster—(one indistinct cicatrix).		<i>Stone:—</i>		M. 3 weeks (inquest) inanition, and not from neglect or starvation	*
I. Small Pox Hospital, F. 19, small pox, confluent (unprotected)	7 days	M. 59, stone in the bladder	*	<i>Purpura:—</i>	
I. under I, variola (not vaccinated)	11 days	<i>Childbirth:—</i>		F. 38, purpura hæmorrhagica	*
I. 5 months, small pox	7 days	The time elapsing from commencement of labour to death should invariably be returned.		M. 77, purpura	*
I. suppuration of lungs.		F. 23, childbirth	11 days	<i>Hæmorrhage, &c.:—</i>	
I. 12, small pox	5 days	puerperal fever	8 days	F. 42, uterine hæmorrhage	*
I. pneumonia	24 days	F. 41, puerperal peritonitis	8 days	<i>Query—Did this occur in Childbirth?</i>	
I. 7 months, small pox (not vaccinated)	7 days	F. 28, puerperal peritonitis	5 days	<i>Miscellaneous Cases:—</i>	
I. 7 months, small pox (not vaccinated)	3 months	F. 32, uterine phlebitis	5 days	F. 38, tapeworm and phthisis	1 year
I. 2, natural small pox	1 week	<i>If this occurred in childbirth the fact should have been stated.</i>		In Islington, East subdistrict, F. 44, cholera, 15 hours (in a clean and open situation.)	
I. 8, variola	2 weeks	F. 34, puerperal convulsions	*	In the East sub-district of Greenwich, F. 30, cholera	*
I. 4, small pox (vaccinated)	12 days	F. 45, labour and flooding—general debility ..	*	M. 14 (inquest, natural apoplexy—had broken a window, and running away suddenly fell paralysed, and died	
I. 16, variola confuens	10 days	F. 28, childbirth	*	in 5 minutes (not previously ill.)	
I. pneumonia	6 days	exhaustion	3 hours	In Gny's Hospital, M. 60 (post mort.), stricture and suppurative inflammation of kidneys—extravasation of urine from ruptured urethra	
I. 4, variola (not vaccinated)	10 days	after delivery from protracted labour.			
I. 1, small pox	*	F. 35, puerperal mania	3 weeks		
I. 5, small pox	*	F. 24, puerperal mania	11 days		
I. 1, variola (natural)	2 weeks	F. 30 (post mort.), exhaustion with inversion of the womb	3 hours after delivery		
I. 3, small pox (not vaccinated—no medical attendant)	*				

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 2; apoplexy from fright, 1; intemperance, 1; violence, 10; other specified causes, 8; "found dead," "natural death," "visitation of God," &c., 5—TOTAL, 27 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 40.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 6th May, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature			Wind as deduced from Osler's Anemometer.					Mean Amount of Cloud, 0-10	Rain in inches, read at midnight		
			Dry		Dew Point	Highest in the sun, as shown by a self-register- ing thermometer read at midnight	Lowest on the grass, as shown by a self-register- ing thermometer read at midnight	In the Water of the Thames at Greenwich, by the self- registering thermometer, read at 9 o'clock next morning		Mean from 6 Obs.	Greatest	Least	General Direction		Pressure in lbs. on the square foot		Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Positive and tension variable at each examination.	About one third part of the sky was covered till 11h. a.m., nearly overcast from this time until noon, and generally clear afterwards. Cumuli, and cirrostratus were the prevailing clouds.
MON.	Positive and tension weak at 6h. p.m. Nothing was shewn at any other time.	Some fragments of cirri were prevalent at 9h. a.m.; with this exception the sky was cloudless throughout the day.
TUES.	Nothing was shewn till 3h. p.m. Positive and tension moderate afterwards.	The sky was cloudless throughout the day.
WED.	Nothing was shewn till noon. Positive and tension strong during the remainder of the day.	A few comoid cirri were scattered over the sky at 6h. p.m., it was otherwise cloudless.
THURS.	At noon, and at midnight nothing was shewn. Positive and tension moderate at other times.	The sky was cloudless throughout the day.
FRID.	Positive and tension variable throughout the day except at 3h. p.m. when nothing was shewn.	The sky was cloudless throughout the day.
SAT.	Positive and tension moderate throughout the day, except at 9h. a.m. and 3h. p.m. at which times nothing was shewn.	The sky was cloudless till about 2h. p.m., when it became partially covered with small fragments of cumuli and decaying clouds, but at 4h. p.m. the sky again became cloudless and remained so until midnight.

The height of the elstern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.
The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours.
The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.
* In reading the 16th column, it will be borne in mind that + is read "higher;" and - "lower," than the average.
The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m., was 45.7, and the mean reading at 6h. p.m. was 58.7; the mean readings at the Royal Observatory for the same time were 44.8 and 58.8 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING MAY 6, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, April 30, the temperature early in the morning was 30.5; this value increased to 61° by 2h. 30m. p.m., and decreased to 39° by midnight. On Monday, May 1, the temperature early in the morning was as low as 30°; at 2h. p.m. it was 61°, and at midnight it was 43°. On Tuesday, the temperature early in the morning, was 37°; at 2h. 10m. p.m. it was 67°, and it was 42° at midnight. On Wednesday, early in the morning, the temperature was 35°; at 3h. p.m. it was 70°; and it was 45° at midnight. On Thursday, early in the morning, the temperature was 37°; at 2h. p.m. it was 70°, and at midnight it was 47°. On Friday, the temperature in the morning was 41°; at 6h. a.m. it was 48°; at 2h. p.m. it was 75°, and at midnight it was 47°. On Saturday, the temperature early in the morning was 40°; at 3h. p.m. it was 70°, and at midnight it was 51°.

The range of temperature during the week was 139.5.

The average temperature of the air for each day was as follows:—

Sunday, 45.8; Monday, 47.0; Tuesday, 52.2; Wednesday, 52.7; Thursday, 53.8; Friday, 57.4; and Saturday, 55.0.

The difference of temperature during each day was as follows:—

Sunday, 30.5; Monday, 31.0; Tuesday, 29.5; Wednesday, 35.5; Thursday, 32.6; Friday, 31.2; and Saturday, 30.0.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 37.5; Monday, 37.0; Tuesday, 41.5; Wednesday, 43.5; Thursday, 43.9; Friday, 45.0; and Saturday, 41.5.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 2.8 gr.; Monday, 2.8 gr.; Tuesday, 3.1 gr.; Wednesday, 3.4 gr.; Thursday, 3.5 gr.; Friday, 3.6 gr.; and Saturday, 3.6 gr.

A marked change took place in the weather at the beginning of this week. The sky was nearly cloudless from the morning of Monday, May 1, to the end of this week. The temperature of the air was increased day by day from being somewhat below the average at the beginning of the week, to a few degrees above the average at the end of the week. The humidity of the air during the week has been small.

The following Table shews the comparative Meteorology since the year 1811.

Week ending May 6.	In the Years,							Excess or Deficiency in the week ending May 6, above or below that in the years						Excess or Deficiency in the year 1848
	1812	1813	1814	1815	1816	1817	1818	1812	1813	1814	1815	1816	1817	
Temperature of the Air	52.9	52.8	52.8	50.5	53.7	46.5	52.0	-0.1	-0.8	-0.8	+1.5	-1.7	+5.5	+0.5
Temperature of the Dew Point	44.4	48.5	45.1	44.6	48.3	40.7	41.8	-2.0	-6.7	-3.3	-2.8	-6.5	+1.1	-3.5
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air.	3.5	4.0	3.6	3.5	4.0	3.1	3.3	-0.2	-0.7	-0.3	-0.2	-0.7	+0.2	-0.3

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the foregoing number is read thus:—the temperature of the air for the week ending 1848, May 6, was 0°9 above the temperature of the corresponding week of 1812.

Births and Deaths registered in London,

During the Week ending Saturday, May 13th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 18.

(The tabular abstract on the first page is for the week ending Saturday, May 13th. The following selection of cases is made from the Returns for the week ending May 6th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning (continued):—	duration	Burns and Scalds:—	duration
F. 51, accidental death from a fall down stairs, causing concussion of the spine and paralysis	8 days	M. 18, accidentally drowned by slipping from a dam into the water.		Daughter of a costermonger, 9 months, scalds from overturning a cup of tea on her face and chest	16 days
M. 6 (no inquest), fall	3 weeks	M. 17, accidental death by a fall from a barge into the Thames, and drowning.		Poison:—	
M. 34, fracture of the skull with compression, from an accidental fall either out of a loft or off a ladder leading to the loft	57 hours	Hanging and Suffocation:—		Son of a smith, 17 days, opiate, given to allay irritation, without intention to destroy life.	
F. 74 (no inquest), general debility produced by dislocation of the hip from a fall	5 weeks	Gardener, 41, suicide by hanging, while insane.		Other Violence:—	
Drowning:—		M. 12, accidental suffocation by hanging—had put a suspended noose of cord under his chin, and let it slip to his neck.		M. 80 (no inquest), injury to hip—fever.....	*
F. 27, drowned herself in a temporary state of insanity.		F. 63, accidental death from choking by eating several pieces of meat	*	M. a few days, found dead in a hamper—wilfully murdered by some person or persons unknown.	
		F. 64, hanged herself, but in what state of mind was to the jurors unknown.			

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:— duration NOTE.—It should be stated in all cases whether vaccination had been performed with effect.	BERMONDSEY; The Leather Market. duration F. 4 months, small pox, very confluent 14 days the child had been vaccinated 4 days before, and the vaccine vesicles were perfect up to the 8th day after vaccination.	Diseased Liver and Delirium Tremens:— duration F. 52, diseased liver *
ENSINGTON; Fulham. 2, variola 15 days 3, small pox, unprotected 14 days	St. GEORGE, SOUTHWARK; Borough Road. M. 2, whooping cough 2 months small pox 10 days not vaccinated—no medical attendant.	F. 52, delirium tremens several weeks paralysis *
WESTMINSTER; St. John the Evangelist. 20, confluent small pox, (after vaccination) 14 days	GREENWICH; St. Nicholas, Deptford. M. 1, small pox (not vaccinated) *	Intemperance:— No deaths enumerated under this head in abstract.
T. JAMES', WESTMINSTER; St. James'-square. 4, small pox (not vaccinated) *	West. F. 4 mon., variola confluent (not vaccinated) .. 9 days	Privation; Want of Breast-milk; Inanition. F. 45, weakness from low living *
T. PANCRAS; Camden Town. Small Pox Hospital, M. 37, small pox, confluent, corymbose, highly modified 21 days erysipelas and hospital fever 10 days vaccinated when young in Germany—two good cicatrices.	Syphilis:— M. 7, weeks, congenital syphilis *	M. 3 months, weaning—convulsions some days diarrhœa *
Small Pox Hospital, M. 18, small pox, confluent (unmodified) 18 days hospital gangrene 7 days vaccinated young at Cheltenham—no cicatrix.	F. 3 months, syphilis from birth	M. 18 days, convulsions 15 hours exhaustion—want of breast-milk.
Small Pox Hospital, M. 26, small pox, confluent, (unprotected) 25 days hospital fever 9 days	Malformation:— F. 30 minutes, malformation of heart and other internal organs.	F. 10 months, atrophy from deficient nourishment of breast-milk.
T. GILES AND St. GEORGE; North St. Giles-in-the-Fields. 3 months, small pox (not vaccinated) *	F. 5 weeks, cyanosis from birth pneumonia 5 days	Purpura:— No deaths ascribed to this cause in abstract.
OLBORN; St. George the Martyr, &c. 4, laryngitis 3 days small pox, natural (vaccinated at the age of 1 month) 4 weeks	M. 6 months (post mort.), congenital malformation of hepatic ducts—jaundice *	Hæmorrhage, Hæmatemesis, &c.:— No deaths enumerated under this head.
7, variola (not vaccinated) 16 days under 1, small pox, natural (not vaccinated) 7 days no medical attendant.	Hernia:— F. 65, strangulated femoral hernia *	Miscellaneous Cases:— M. 18, scrofulous disease of ankle-joint—amputation 2 years phthisis pulmonalis 8 months
T. ANDREW; East. 4 months, small pox (not vaccinated) 11 days 4, small pox (not vaccinated) 5 days	Diabetes:— M. 51, diabetes 2 years	M. 3, scarlatina 3 weeks pneumonia 2 weeks sloughing after a blister applied to the chest 8 days
3, convulsions, preceding the eruption of small pox 12 hours	Stone:— In University College Hospital, M. 47 (post mort.), stone in the bladder—lithotomy—erysipelas—congestive pneumonia *	M. 24, empyema—amputation for diseased ankle *
ETHNAL GREEN; Church. 2, variola (not vaccinated) 1 week	Childbirth:— The time elapsing from commencement of labour to death should invariably be returned.	In Rotherhithe, F. 75, cholera 5 days
WHITECHAPEL; Aldgate. 5 months, small pox *	F. 22, puerperal fever 5 days F. 26, puerperal fever 10 days F. 22, puerperal fever *	In Oxford-terrace, F. 43, cholera 2 days chronic hepatitis—listula in ano *
vaccinated 10 days before death by the parish surgeon.	F. 32, childbirth 8 days inflammation 3 days gangrene 2 days	In Middlesex Hospital, F. 23, ovarian cysts of right ovary *
T. GEORGE IN THE EAST; St. Paul. 22, confluent small pox (not vaccinated) .. 8 days	F. 36, puerperal fever 5 days F. 22, puerperal mania 5 days F. 26, puerperal convulsions—apoplexy 3 weeks	operation for their removal. acute peritonitis 72 hours after
St. Mary. 8, small pox 14 days first attack—vaccinated with effect 7 years before.	F. 34, complex labour; exhaustion after delivery by instruments 2 days	In St. Bartholomew's Hospital, M. 46, mercurial tremors followed by typhus *
T. SAVIOUR; Christchurch. 1, small pox (not vaccinated) 7 days 4, small pox (not vaccinated) 12 days	Disease of Heart and Childbirth:— F. 30, accouchment 15 minutes disease of heart—want of power.	Daughter of a porter, 6 months (inquest), fright caused by the smack of a whip *
	Delirium Tremens:— M. 29, delirium tremens 7 days M. 43, delirium tremens—congestion of the lungs *	M. 41, inflammation with œdema of pharynx and soft palate 24 hours

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 1; disease of the heart, 1; fright, 1; violence, 12; other specified causes, 12; "found dead," "natural death," "visitation of God," &c., 10—TOTAL, 37 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 39.

* Besides the two cases of cholera mentioned above, the following, which occurred in Aldgate, sub-district of Whitechapel, was registered in the week ending May 13th:—Fem. aged 40 years, cholera. "The case presented the appearance of Asiatic cholera, viz., purging constant, cholera voice, no bile in stools, suppression of urine; died in 4 days in a state of collapse."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

DAY	ELECTRICITY	GENERAL REMARKS
SUN.	Nothing was shewn at each examination.	A few fragments of fleecy clouds with haze prevailed about noon; otherwise the sky was cloudless throughout the day.
MON.	Positive and tension strong at 6h. a.m., nothing was shewn afterwards till 6h. p.m. when it became positive with tension moderate, continuing so till midnight.	The sky was cloudless till about noon when it became partially covered with thin cirri and haze which continued till about 9h. p.m., when the sky became again cloudless and remained so until midnight.
TUES.	The same as on the day preceding.	The sky was generally cloudless throughout the day, a few light clouds with haze prevailing occasionally around the horizon.
WED.	Nothing was shewn during the day, except at 9h. a.m. and 6h. p.m., at which times it was positive with tension variable.	The sky was cloudless throughout the day. There was a very heavy dew during the morning hours before sunrise.
THURS.	Nothing was shewn during the day, except at 6h. a.m. and 6h. p.m., at which times it was positive with tension weak.	The sky was cloudless throughout the day; haze continually prevailed in the horizon.
FRI.	Nothing was shewn till midnight when it became positive with tension weak.	The sky was cloudless till about noon, when it became partially covered with cirrocumuli and thick haze; after which time the cloud gradually dispersed, but the haze continued prevalent until midnight.
SAT.	Nothing was shewn till 6h. p.m. when it became positive with tension moderate, remaining so until midnight.	Light clouds with haze prevailed till about 6h. a.m. after which time the sky became cloudless and continued so until midnight; the haze however was prevalent during the greater part of the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's 44 in. standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1843.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read. Towards the end of this week it was found that the steel index of the maximum thermometer at high temperatures, returned with the mercury.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. On the 9th day there was so much muddy water within the glass case that the maximum thermometer could not be read. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. 30m. a.m., was 51.4; and the mean reading at 7h. 30m. p.m. was 67.7; the mean readings at the Royal Observatory at 6h. a.m. and 6h. p.m. were 49.9 and 67.5 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING MAY 13, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, May 7, the temperature of the air early in the morning was 43°; at 8h. a.m. it was 61°; at 2h. 30m. p.m. it was 77°; and it was 51° at midnight. On Monday early in the morning it was 42°; at 2h. p.m. it was 77°; and at midnight it was 51°. On Tuesday the temperature early in the morning was 41°; at 8h. a.m. it was 55°; between 1h. p.m. and 3h. p.m. it was 75°; and it was 48° at midnight. On Wednesday, early in the morning, the temperature was 41½°; this value increased to 79½° by 1h. p.m.; and decreased to 53° by midnight. On Friday, early in the morning, the temperature was 44½°; at 2h. 15m. p.m. it was 79½°; and it was 51½° at midnight. On Saturday the temperature, early in the morning, was 44½°; at 1h. 45m. p.m. it was 80°; and it was 50° at midnight.

The average temperature of the air for each day was as follows:—

Sunday, 60.0; Monday, 59.6; Tuesday, 58.5; Wednesday, 58.2; Thursday, 60.5; Friday, 62.2; and Saturday, 62.7.

The difference of temperature during each day was as follows:—

Sunday, 34.0; Monday, 35.2; Tuesday, 35.0; Wednesday, 32.5; Thursday, 38.0; Friday, 35.5; and Saturday, 36.5.

The range of temperature during the week was 39°.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 45.0; Monday, 44.0; Tuesday, 46.5; Wednesday, 47.0; Thursday, 48.0; Friday, 47.5; and Saturday, 45.5.

During the early afternoon hours of every day the temperature of the dew point has been from 20° to 30° below that of the air. The degree of humidity of the air has been small.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 3.5 gr.; Monday, 3.4 gr.; Tuesday, 3.7 gr.; Wednesday, 3.8 gr.; Thursday, 3.9 gr.; Friday, 3.8 gr.; and Saturday, 3.5 gr.

The sky from May 1 to the present time has been almost cloudless, and the atmosphere for the most part has been free from haze.

The following Table shews the comparative Meteorology since the year 1841.

Week ending May 13.	In the Years,						Excess or Deficiency in the week ending May 13, above or below that in the years						Excess or Deficiency in the year 1848
	1842	1843	1844	1845	1846	1847	1842	1843	1844	1845	1846	1847	
Temperature of the Air	50.3	49.8	57.0	46.3	54.3	55.0	60.2	+ 9.9	+ 10.4	+ 3.2	+ 13.9	+ 5.9	+ 5.2
Temperature of the Dew Point	43.4	46.2	49.2	41.6	47.2	48.9	46.2	+ 2.8	0.0	- 3.0	+ 5.1	- 1.0	- 2.7
Mean Amount of Water in a Cubic Foot of Air	3.5	3.8	4.1	3.3	3.8	4.1	3.7	+ 0.2	- 0.1	- 0.4	+ 0.4	- 0.1	- 0.4

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, May 13, was 9.9 above the temperature of the corresponding week of 1842.

Erratum.—In the foot note last week, for 0.9 above, read 0.9 below.

Births and Deaths registered in London,

During the Week ending Saturday, May 20th, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 19. (The tabular abstract on the first page is for the week ending Saturday, May 20th. The following selection of cases is made from the Returns for the week ending May 13th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.									
NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."									
Fractures and Contusions:—		duration	Fractures and Contusions (continued)		duration	Wounds:—		duration	
Shipwright, 52, accidental death by falling down a ship's hold		6 days	In Hyde Park Barracks, Lieutenant 2d Dragoon Guards, 21 (post mort.), secondary abscess in right lung after compound fracture of leg, from the fall of a horse on which he was riding in Piccadilly		24 days	Wife of a coal-heaver, about 60 (at Vauxhall-road), hæmorrhage from a wound in the throat, dividing windpipe, inflicted by herself when of unsound mind, and afterwards hanging herself with a handkerchief to a hook in the wall, where she was found dead with her feet on the ground.			
Labourer, 28, injuries of the left side of the ribs, from falling off a pile of timber, at Lambeth, accidentally		65 days	M. 64 (no inquest), fragilitas ossium		18 months	Cigar-maker, 32, cut his throat in a temporary state of insanity			
In Westminster Hospital, son of a labourer, 1 (post mort.), hæmorrhage from ruptured liver—fell from the kerb stone as an omnibus was passing in Tothill-street, the wheel of which went over him		4 hours	M. 1 (no inquest), concussion of the brain ..		10 days				
NOTE.—It should have been stated whether by fall, or in what other manner the injury was produced.									

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Drowning:—

F. about 40 (person unknown), found dead in the Regent's Canal, without marks, apparently drowned.
M. (age unknown), found dead—apparently drowned, without marks of violence.
M. 17, accidental death from drowning, by falling from a stage at Deptford.
M. 64, suicide by drowning in temporary mental derangement (in water 20 minutes).
Seaman of the brig "Charles Stuart," of Shoreham, Sussex, 19, drowned by accidentally falling from a brig into the Thames (in water 39 hours).

duration

Drowning (continued):—

Son of a groom, 12, drowned in the Surrey Canal Dock, by falling accidentally from a vessel therein moored (in water 10 minutes).
Boy, newly born, found dead in the River Thames (no proof whether born alive—identity not ascertained).

Hanging and Suffocation:—

M. 40, hanged himself in a temporary state of insanity.
Carpenter, 39, strangled himself with a handkerchief whilst in an unsound state of mind.

duration

Hanging and Suffocation (continued):—

M. 32, found dead in a stable, having apparently died from suffocation.
Bricklayer, 32, accidentally suffocated by the falling in of an oven instant
Burns and Scalds:—
F. 74, accidental death from burns instant
F. 2 (no inquest), gangrenous wound of the chest from scald by hot water 1 month
F. 2 (no inquest), scald 16 days
Poison:—
Builder, 54, found dead; having apparently died from the effect of laudanum, which he was in the habit of taking as a sedative.

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

KENSINGTON; St. Paul, Hammersmith.
F. 7, small pox 13 days
vaccinated when young, but without success.

Town.
M. 15, small pox (not vaccinated) *

ST. PANCRAS; Tottenham.
M. 7, confluent small pox (not previously vaccinated) 10 days
M. 2, variola 12 days

Camden Town.
The two cases following occurred in the Small Pox Hospital:—

M. 18, small pox, confluent (unprotected) 10 days
M. 22, small pox, confluent (unprotected) 9 days

Regent's Park.

F. 6 months, small pox (not vaccinated) 7 days

EAST LONDON; Cripplegate.

F. 1, small pox (not vaccinated) 6 days

WEST LONDON; North.

M. 3, variola *

SHOREDITCH; Holywell and Moorfields.

M. 2, variola confluent (not vaccinated) 9 days

BETHNAL GREEN; Town.

M. 3, small pox, natural (not vaccinated) *

M. 6, small pox (not vaccinated) *

M. 3, small pox, confluent (not vaccinated) 14 days

Hackney Road.

M. 3 mon., small pox (not vaccinated) 14 days

WHITECHAPEL; Spitalfields.

M. 2, small pox (not vaccinated) 1 week

Mile-end, New Town.

M. 5, gangrene following small pox *

ST. GEORGE IN THE EAST; St. Paul.

M. 6 mon., small pox (not vaccinated) 10 days

St. Mary.

M. 5 mon., small pox (first attack—not vaccinated) 8 days

STEPNEY; Mile End, Old Town (Upper).

M. 24, small pox (not vaccinated) 14 days

ST. GEORGE, SOUTHWARK; Kent Road.

M. 8 mon., small pox (not vaccinated) 7 days

Borough Road.

F. 3, small pox 14 days

vaccinated 3 times without effect 2½ years ago.

Small Pox (continued):—

ST. MARY, NEWINGTON; Trinity.
F. 1, natural small pox 7 days
no medical attendant.

GREENWICH; St. Paul, Deptford.

M. 6 mon., small pox 11 days

first attack—not vaccinated.

F. 8 mon., small pox 12 days

first attack—not vaccinated.

Syphilis:—

M. 34, unknown—attended for syphilis *
F. 6 weeks, syphilis, congenital.
M. 20 (post mort.), phimosi—verruca—operation—erysipelas *
M. 4 mon., marasmus—fever—syphilis *
the mother was diseased.
F. 3 mon., general debility from venereal taint, 3 months

Malformation:—

F. 3 days, malformation of the heart.
M. 1 mon., malformation of mouth, &c.—(the bones being deficient, the child could not be supported).
M. 21, asthma from deformed thorax 15 years
dropsy 7 months
M. 3, congenital malformation of chest—pneumonia *
F. 4 days, malformation of the heart.
F. 4 mon., spina bifida—pneumonia *
M. 10 weeks, malformation of the mouth and palate.

Hernia:—

In King's College Hospital, F. 70 (post mort.), strangulated tumoral hernia 10 days
exhaustion.
F. 80, hernia many years
strangulated 2 days

Diabetes:—

F. 37, diabetes 2 years
pneumonia 4 weeks

Stone:—

M. 60, stone in the bladder—lithotripsy *

Childbirth:—

The time elapsing from commencement of labour to death should invariably be returned.

F. 24, puerperal mania, with fever; and gastro-enteritis, with extreme nervous susceptibility 6 days

F. 30, puerperal peritonitis 6 days

F. 25, fever with labour 5 days

F. 25, accouchment—hysteritis 5 days

F. 28, puerperal peritonitis 5 days

F. 38, puerperal fever *

F. 36, effusion of water on the brain, from suppressed mammary secretion 6 days after confinement

F. 22, childbirth 7 days

puerperal mania 4 days

F. 34, placenta prævia—uterine hæmorrhage 12 hours

Childbirth (continued):—

F. 36, spasmodic contraction of the uterus (immediately after giving birth to a still-born female) 4
F. 33, childbirth 6 hours
hæmorrhage with adherent placenta 2 hours
F. 24, diarrhoea 4 days after childbirth
F. 29 (inquest), natural death from exhaustion in protracted labour *
F. 27, childbirth 45 days
over-lactation; cerebral congestion with effusion 10 days

Disease and Childbirth:—

F. 35, inflammation of the throat and soft palate—14 days afterwards the membranes of the brain became affected—abortion about 5 months; thereafter sank.
F. 35, phthisis 1 year
puerperal mania 10 days
F. 32, erysipelas of lower extremities 1 month
premature parturition 9 days

Delirium Tremens:—

No deaths enumerated in abstract under this head.

Intemperance; Privation:—

No deaths enumerated under either of these heads in abstract.

Want of Breast-milk:—

M. under 1, want of breast-milk *
F. 9 mon., mesenteric disease 5 weeks
want of milk from birth.

Purpura:—

F. 1, purpura 1 month

Hæmorrhage, Hæmatemesis, &c.:—

F. 72, melæna 1 week
M. 1, melæna *
F. 1 week, hæmorrhage from the umbilical cord *
F. 8, atrophy and hæmorrhage *
M. 65 (inquest, post mort.), natural death; sudden rupture of the auricles of his head *

Other Cases:—

M. 40, hæmatemesis—softening of the brain *
F. 27 (post mort.), ulcer of stomach and hæmatemesis 36 hours
M. 83, disease of liver—vomiting of blood 3 days

Cholera:—See Weekly Return, No. 19, page 3.

Miscellaneous Cases:—

In sub-district of Saffron-hill, F. 11 (inquest), typhus, occurring in a house which contained other persons labouring under typhus (no medical treatment) 4 days
In St. George-in-the-East (St. Paul), F. 3, typhus 14 days
scarlatina 7 days
The above is the third death in one family from the same cause, in less than two months.
F. 47, malignant tumour of the right shoulder (supposed to have weighed 7lbs.) 2 years

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 2; childbirth, 1; violence, 19; other specified causes, 1; "found dead," "natural death," "visitation of God," &c., 2—TOTAL, 25 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 34.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 20th May, 1848.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive with weak tension at 6h. p.m., and strong tension at midnight. Nothing was shewn at any other examination.	A few light clouds prevailed during the morning, but generally the sky was cloudless afterwards. The atmosphere at times was very hazy.
MON.	Nothing was shewn between noon and 2h. 30m. p.m. Positive, and tension strong at other times.	The sky was generally covered with cirrocumuli and thin cirrostratus till 8h. a.m.; the clouds were variable in amount till 2h. p.m., and the sky was clear afterwards. Thunder was heard during the afternoon.
TUES.	Nothing was shewn till noon. Positive and tension variable during the remainder of the day.	Small fragments of cloud prevailed from noon till midnight, previous to which time the sky had been clear; cumuli and light cirri were the prevailing clouds.
WED.	Positive and tension strong throughout the day.	The sky was overcast till 6h. a.m. and again at midnight; at other times about one-third part was covered. Several flashes of lightning were seen during the evening.
THURS.	Positive and tension weak at 6h. a.m. Nothing was shewn at any other time.	The sky was generally overcast till 9h. a.m., about one-half covered till 6h. p.m. and clear afterwards. Slight showers of rain fell at intervals during the morning, and thunder was heard during the afternoon.
FRID.	Positive and tension variable between noon and 6h. p.m. Nothing was shewn at any other examination.	The sky was mostly covered with cirrostratus and scud throughout the day. A few drops of rain occasionally fell.
SAT.	Nothing was shewn throughout the day.	Three-fourths of the sky were covered till 8h. p.m., and it was generally cloudless afterwards. Nimbi, cirrostrati and scud were the prevailing clouds. A slight shower of rain fell at 11h. a.m. The amount of rain which has fallen in the last three days has been too small to measure.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10, and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 54.5; and the mean reading at 6h. p.m. was 64.8; the mean readings at the Royal Observatory for the same times were 52.7 and 64.0 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING MAY 20, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, May 14, the temperature early in the morning was 44.5; at 8h. a.m. it was 61.0; at 0h. 30 m. p.m. it was 81.0, and at midnight it was 54. On Monday early in the morning the lowest temperature was 50; at 2h. 45m. p.m. it was 81.5; and this value decreased to 57 at midnight. On Tuesday early in the morning the temperature was 47.5; at 3h. p.m. it was 80; and at midnight it was 54. On Wednesday early in the morning the temperature was 47.5; at 1h. 45m. p.m. it was 65.5, and it was 47 at midnight. On Thursday early in the morning the temperature was 43; at noon it was 64, after which the temperature declined and it was 50 at midnight. On Friday early in the morning the temperature was 47.2; at about 1h. p.m. it was 65, and it was 51 at midnight.

The average temperature of the air for each day was as follows:—
Sunday, 62.7; Monday, 65.7; Tuesday, 63.5; Wednesday, 61.5; Thursday, 56.5; Friday, 54.0; and Saturday, 56.4.

The difference of temperature during each day was as follows:—
Sunday, 36.5; Monday, 36.5; Tuesday, 31.5; Wednesday, 32.0; Thursday, 18.0; Friday, 22.0; and Saturday, 18.3.

The range of temperature during the week was 38.5.

The average temperature of the Dew Point for each day was as follows:—
Sunday, 51.0; Monday, 52.5; Tuesday, 48.0; Wednesday, 51.0; Thursday, 43.5; Friday, 46.0; and Saturday, 49.0.

During the early afternoon hours of the first three days of this week the temperature of the air exceeded that of the dew point by quantities varying from 25° to 30°. On Wednesday a marked difference took place in the weather both in the temperature of the air as well as in its humidity. On the 16th the temperature of the air was 15° above the average for the season, and on the 18th it was somewhat below the average.

The average weight of water mixed with a cubic foot of air was as follows:—
Sunday, 4.4 gr.; Monday, 4.5 gr.; Tuesday, 3.9 gr.; Wednesday, 4.3 gr.; Thursday, 3.3 gr.; Friday, 3.7 gr.; and Saturday, 4.1 gr.

The sky from May 1 to May 15 was almost always free from cloud.

The following Table shews the comparative Meteorology since the year 1841.

Week ending May 20.	In the Years,							Excess or Deficiency in the week ending May 20, above or below that in the years *						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	52.6	51.1	51.0	49.7	51.3	56.9	60.0	+7.4	+8.9	+9.0	+10.3	+8.7	+3.1	7.9
Temperature of the Dew Point	46.5	48.5	43.7	44.2	45.3	49.6	48.7	+2.2	+0.2	+5.0	+4.5	+3.4	—0.9	2.1
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air.	3.8	4.0	3.5	3.5	3.6	4.1	4.0	+0.2	0.0	+0.5	+0.5	+0.4	—0.1	0.2

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, May 20, was 7.4 above the temperature of the corresponding week of 1842.

Births and Deaths registered in London,
During the Week ending Saturday, May 27th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 20.

(The tabular abstract on the first page is for the week ending Saturday, May 27th. The following selection of cases is made from the Returns for the week ending May 20th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued)	duration	Fractures and Contusions (continued):—	duration
M. 28, fracture of the skull and spine, by falling from a loft, when playing with a dog. <i>instantly</i>		In Lambeth Workhouse, widow 70, natural serous effusion—death accelerated by concussion, having fallen in consequence of effusion.....	*	Gentleman of independent fortune, 69, injuries of the head and body from being accidentally knocked down, and run over by a pleasure van after dark.....	*
Daughter of a wood-stainer, 5, injuries of the head from falling out of a window, 30 feet, into a yard.....	11 days	In Westminster Hospital, stone-mason's labourer, 34 (<i>post mort.</i>), fracture of the skull and injury of the brain, by a stone-mason's mallet, which fell through the scaffold, when at work at Battersea Church.....	7 hours	Wounds:—	
She had been locked into a bed-room, was alarmed on waking at being alone, and having gone to the window fell out, on looking forth.....		M. 67 (<i>no inquest</i>), contused chest—diseased bladder.....	1 year	M. 5 (<i>no inq.</i>), exhaustion from a wound....	21 days
M. 41, accidental from apoplexy, which may have been accelerated by a sudden fall.				<i>It should have been stated how the wound was caused.</i>	
				Labourer, 24, suicide by shooting himself with a gun loaded with gunpowder and leaden shot (of unsound mind from intemperance) <i>instantly</i>	

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Drowning:—	duration	Drowning (continued):—	duration	Burns and Scalds:—	duration
In the Serpentine River, Hyde Park, labourer 24, drowned whilst bathing (under water about 8 minutes).		Ostler and waiter 20, drowned while diving to bathe, soon after excitement with alcoholic liquors.		F. 1 (no inq.), debility from severe burns	2 months
F. domestic servant 18, drowned in a water tank; whether by accident or otherwise unknown.		M. 19, accidentally drowned while bathing (under water 15 minutes).		F. disease of intestines.	*
Illegitimate daughter of a domestic servant, 6 months, drowned in a water tank; whether by accident or otherwise unknown.				F. pauper 86, accidentally burnt	*
F. 44, suicide by drowning—found dead in the Regent's Canal.		Hanging and Suffocation:—		F. 2 (no inq.), scalded face	2 weeks
ou of a boot and shoe-maker, 12, drowned by falling into a brickfield hole while bathing (could not swim).		Coachbody-maker, 43, suicide by hanging—a drunkard of unsound mind.		cyanehic	*
I. (person unknown, dressed as a labourer), between 40 and 50, drowning—how he came into the water, and when, unknown.		Prisoner in the Model Prison, Islington, 18, found hanging by the neck in a cell—suicide—state of mind unknown.		Poison:—	
ork-dealer 43, drowning—whether accident or suicide unknown.		Potman at a public-house about 25, suicide by hanging, just after having been charged with theft, and rendered insane.		M. about 45, suicide with prussic acid, while insane	*
		M. 53, hanged himself in a temporary state of insanity.		<i>See Miscellaneous Cases below.</i>	
		Spinster (lunatic) 27, wilful murder by suffocation, by a person or persons unknown.		Other Violence:—	
				M. 68 (no inquest) accident	2 years
				F. 43 (no inquest), debility and gradual decline, accelerated by taking cold in a new damp house.	*

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HEMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Childbirth (continued):—	duration
NOTE. —It should be stated in all cases whether vaccination had been performed with effect.		STEPNEY; Shadwell and Wapping.		F. 29, difficult labour from deformed pelvis, &c. 9 days	
St. LUKE; Chelsea, North-West.		M. 1, confluent small pox (not vaccinated)	9 days	bronchitis	6 days
M. 1, small pox (not vaccinated)	8 days	———— Mile End, Old Town (Upper).		F. 29, flooding after childbirth—debility	5 weeks
convulsions from teething	2 days	M. 11 weeks, variola (not vaccinated)	1 week	F. 39, flooding post partum	*
WESTMINSTER; St. Margaret.		BERMONDSEY; The Leather Market.		F. 34, debility after confinement	5 weeks
F. 3, variola	9 days	M. 5 mon., small pox	8 days	F. 42, accouchment—hæmorrhage—exhaustion, 8 days	
St. MARYLEBONE; All Souls.		convulsions	24 hours	F. 25, partus difficilis—convulsions	8 days
M. 2, variola	2 months	GREENWICH; St. Nicholas, Deptford.		F. 21, hysteritis	8 days after parturition
meningitis	14 days	M. 6 mon., variola (not vaccinated)	8 days		
St. PANCRAS; Somers Town.		———— Woolwich Dock Yard.		Disease and Childbearing:—	
F. 3, small pox (not vaccinated)	5 days	M. 1, small pox (first attack—not vaccinated)	*	F. 29, continued fever	4 weeks
———— Camden Town.		———— Greenwich.		icterus	*
n Small Pox Hospital, M. 22, small pox confluent	19 days	M. 1, small pox (natural)	*	gestation	6 months
said to have been vaccinated young at Willand, Devon—no cicatrix.		LEWISHAM; Lcc.		F. 36, cancer	5 months
n Small Pox Hospital, M. 26, small pox, confluent (unprotected)	7 days	M. 4, confluent small pox	11 days	and labour apparently conjoined.	
HOLBORN; St. George the Martyr, &c.		Syphilis:—		Delirium Tremens:—	
F. under 1, small pox (natural—not vaccin.)	3 days	F. 2 mon., syphilis	7 weeks	M. 22, delirium tremens	*
St. LUKE; Whitecross Street.		ulcerated condylomata	2 weeks	M. 41, delirium tremens	3 days
M. 10 mon., small pox	1 week	convulsions	3 days	In Strand Workhouse, F. 38, delirium tremens—sloughing back	*
———— Old Street.		Malformation:—		M. 31, delirium tremens	*
1, small pox	3 weeks	F. 12 hours, cyanosis	from birth	M. 37, delirium tremens	2 days
vaccinated in the country at 6 weeks old, not known whether effectually.—Three other children had it, but recovered.		M. 1 month, harelip, and general congenital malformation.		M. 39, delirium tremens—pneumonia	*
CITY OF LONDON; North East.		F. 12 days, anus imperforatus.		M. 33, delirium tremens	4 days
F. 3, variola	12 days	F. 7 weeks, cyanosis, congenital.		Intemperance:—	
SHOREDITCH; Holywell and Moorfields.		M. 27 (post mort.), congenital malformation of the heart.		F. 27 (inquest), disease caused by excessive use of intoxicating liquors	*
M. 5, variola confluent (not vaccinated)	9 days	dyspnoea—dropsy	4 months	Labourer, 57 (inquest), natural; ill previously from habitual intoxication	*
BETHNAL GREEN; Hackney Road.		M. 24 days, morbus ceruleus.		Privation; Want of Breast-milk, &c.:—	
M. 1, small pox (natural)	12 days	M. 3 days, rectum imperforatum.		No deaths enumerated in abstract under these heads.	
F. 9 mon., small pox (not vaccinated)	7 days	M. 4 hours, malformed heart—asphyxia.		Tabes Mesenterica and Want of Breast-milk:—	
no medical attendant.		Hernia:—		M. 10 mon., tabes mesenterica	— months
F. 6, small pox	9 days	In St. George's Hospital, M. 42, dysentery after operation for strangulated hernia	*	probably from want of breast-milk.	
vaccinated at 1 year—one cicatrix.		In University College Hospital, M. 47 (post mort.), strangulated scrotal hernia—peritonitis	18 hours	Eczema and Improper Food:—	
WHITECHAPEL; Spitalfields.		M. 54, hernia and insanity	*	F. 6 mon., eczema	7 weeks
M. 4, small pox	3 weeks	M. 15 days, congenital umbilical hernia—strangulation.		wasting from unsuitable food.	
vaccinated 3 years 10 months ago.		M. 7 weeks, congenital hernia—hydrocele	*	Purpura and Scurvy:—	
St. GEORGE IN THE EAST; St. Paul.		F. 48, hernia—peritonitis after operation	46 hours	F. 1, scurvy	1 year
F. 1, small pox natural	10 days	F. 64, hernia	6 weeks	marasmus	1 month
———— St. Mary.		general debility.		Hæmorrhage, Hæmatemesis, &c.:—	
F. 3, small pox	12 days	M. 35 (post mort.), strangulated inguinal hernia, producing peritonitis and gangrene.		F. 25 (inquest) sudden, but natural—rupture of a blood-vessel of the liver.	*
first attack—vaccinated 2 years ago without effect.		M. 77, strangulated hernia	*	Miscellaneous Cases:—	
F. 9 weeks, small pox (not vaccinated)	4 days	Diabetes:—No deaths enumerated under this head.		F. 25 (inquest) bronchocele	4 years
———— St. John.		Stone:—		sudden from suffocation.	
F. 2, measles	1 week	In Guy's Hospital, M. 10 (post mort.), calculus in bladder—cystitis—nephritis	*	M. 11, congestion of the brain from coup-de-soleil	34 hours
confluent small pox (not vaccinated)	11 days	Childbirth:—		M. 26 (post mort.), cerebral compression—blood spontaneously effused, external to the dura mater.	
F. 6 mon., small pox (not vaccinated)	9 days	The time elapsing from commencement of labour to death should invariably be returned.		F. 52, fever, with bronchitis	14 days
pneumonia	*	F. 31, puerperal fever	13 days	This person nursed a female who was suffering from cellular and purulent inflammation, the result of inoculation from a puerperal patient, and whose husband is now ill with similar abscesses.	
STEPNEY; Ratchiffe.		F. 34 (inquest), exhaustion from loss of blood and pain after parturition, from the placenta not being removed by John Bradbridge		F. 40, abscesses from inoculation, while attending a sick person.	
M. 3, small pox (not vaccinated)	9 days	Nice, accoucheur, not a legally qualified medical practitioner—manslaughter.		In Dreadnought Hospital (post mort.), M. 33, fever	33 days

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 3; hæmorrhage, 1; ossification of the heart, 1; other disease of the heart, 3; childbirth, 1; intemperance, 2; violence, 23; other specified causes, 4; "natural death," "visitation of God," "visitation of God," "found dead," &c., 12—TOTAL, 50 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 40.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension moderate during the morning. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling at intervals during the afternoon and evening.
MON.	Positive and tension strong between noon and 6h. p.m. Nothing was shewn at any other times.	The sky was generally covered throughout the day; the prevailing clouds were cumulostrati, cirrostrati and scud. Rain was falling between 6h. a.m. and 3h. a.m.
TUES.	Positive and tension strong from noon till 3h. p.m. and weak till 6h. p.m. Nothing was shewn at any other time.	Three-fourths of the sky were covered till 6h. p.m., and it was generally clear during the remainder of the day. cirrostratus, fleecy clouds and scud.
WED.	Positive and tension variable throughout the day.	One-third part of the sky was covered from 9h. a.m. till 3h. p.m., and it was clear at other times. Cumuli, cumulostrati, and fleecy clouds.
THURS.	Positive and tension variable till 6h. p.m. Nothing was shewn afterwards.	The sky was cloudless till noon; from noon till 6h. p.m. clouds frequently prevailed, but they were very variable in amount, and the sky was generally clear afterwards.
FRI.	Positive and tension weak at 6h. p.m. Nothing was shewn at any other examination.	The amount of cloud that prevailed till noon was variable; from this time till 6h. p.m. about three-fourths of the sky were covered, and generally clear afterwards.
SAT.	Positive and tension moderate between 3h. p.m. and 6h. p.m. Nothing was shewn at any other time.	The sky was overcast till noon, one-half covered till 4h. p.m. and cloudless afterwards; cumuli, cirrocumuli, cirrostratus and scud.

REMARKS ON THE WEATHER DURING THE WEEK ENDING MAY 27, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, May, 21, the temperature of the air early in the morning was 41°; at 7h. a.m. it was 51°; at 0h. 30m. p.m. it was 67°; after this time this value slowly decreased to 57° at midnight. On Monday, early in the morning the temperature was 50°; this value increased to 72° at 2h. 30m. p.m., and decreased to 56° at midnight. On Tuesday, the temperature was 41° early in the morning; it was 72° at 2h. p.m., and it was 46° at midnight. On Wednesday, early in the morning the temperature was 41°; at 1h. 0m. p.m. it was 74°, and at midnight it was 48°. On Thursday, early in the morning the temperature was 41° 2; at 1h. 0m. p.m. it was 73° 5, and it was 51° at midnight. On Friday, the lowest temperature occurred early in the morning, and was 46° 5; at 1h. 0m. p.m. it was 77°; and at midnight it was 53°. On Saturday, early in the morning the temperature was 52° 2; this value then increased to 69° 5, by 2h. 0m. p.m.; and decreased to 46° at midnight, and to 38° after midnight.

The average temperature of the air for each day was as follows:—

Sunday, 54° 0; Monday, 61° 0; Tuesday, 56° 5; Wednesday, 57° 5; Thursday, 59° 8; Friday, 61° 7; and Saturday, 57° 8.

The difference of temperature during each day was as follows:—

Sunday, 26° 0; Monday, 22° 0; Tuesday, 31° 0; Wednesday, 33° 0; Thursday, 37° 3; Friday, 30° 5; and Saturday, 23° 5.

The range of temperature during the week was 37° 5.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 46° 0; Monday, 55° 5; Tuesday, 46° 0; Wednesday, 47° 5; Thursday, 49° 5; Friday, 54° 5; and Saturday, 51° 0.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 3.7 gr.; Monday, 5.1 gr.; Tuesday, 3.8 gr.; Wednesday, 4.0 gr.; Thursday, 4.2 gr.; Friday, 4.7 gr.; and Saturday, 4.4 gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending May 27.	In the Years,							Excess or Deficiency in the week ending May 27, above or below that in the years *						Excess in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 21.

(The tabular abstract on the first page is for the week ending Saturday, June 3d. The following selection of cases is made from the Returns for the week ending May 27th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VICLENT DEATHS, MADE CHIEFLY BY CORONER.			
NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."			
Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration
M. 78 (no inquest), bronchitis	*	In London Hospital, sailor, 65, accidental fall—fractured thigh	13 days
In University College Hospital, mason's labourer, 35, injuries from the fall of a wall at Euston-square Railway Station, the wall yielding from having been built too rapidly in a bad season of the year	*	In London Hospital, mate of a ship, 48, accidental fracture of the leg from a blow by the fall of a yard	5 days
M. 38, pianoforte-key-maker, cerebral vessel ruptured by a blow on the head from slipping down stairs while drunk	1 day	In London Hospital, shipwright, 53, accidental from a broken leg by the fall of a shore	2 months
		In London Hospital, widow of a sailor, 68, fall in the footway and fractured leg	10 days
		In London Hospital, bricklayer, 36, dislocation of ankle by a fall from a scaffold	7 months
		Fractures and Contusions (continued)	duration
		Widow of a mariner, 83, concussion of the brain—found dead at the bottom of a flight of stairs, having fallen down the same—how unknown.	
		F. 2, natural death, which may have been accelerated by an accidental fall.	
		In Lambeth Workhouse, M. 88, injury to the left hand and wrist by falling in the public street accidentally—erysipelas	5 days
		In University College Hospital, son of a labourer, 5, run over by a coke-cart (accidental)	*

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Fractures and Contusions (continued):— duration

In University College Hospital, son of a porter, at an hotel, 8, accidentally, killed by the fall of a tail-board of a cart on his head .. *

In University College Hospital, greengrocer's journeyman, 36, mortal effects of an accidental bruise of the right foot by the wheel of a cart. *

In University College Hospital, porter, 35, injuries to the arm by falling off the front seat of a van he was driving—his foot having slipped from the foot-board while pulling up. death after amputation in 7 hours

In University College Hospital, beer shop-keeper and grocer, 32, injury to the leg from the wheel of an omnibus—fell from the roof seat which over-lapped the roof, and was fastened on by hinges not sufficiently strong. 5 days

In London Hospital, labourer, 58, accidentally killed by being run over by the hind wheel of a waggon. 7½ hours

In London Hospital, green-grocer, 38, accidental from a broken leg by a fall from a cart. 4 months

In London Hospital, groom, 35, fracture of the arm from being crushed by a wheel .. *

In University College Hospital, labourer, 36, accidentally crushed between the buffers of two railway carriages.

In London Hospital, labourer, 30, injured foot from being crushed by a railway carriage passing over it—lock-jaw .. 10 days

In St. Thomas' Hospital, labourer, 36 (post mort.), exhaustion from the destruction of his right arm, and fracture of two ribs by machinery (at Great Guildford-street, Southwark) .. 3 hours

Porter at the London-bridge Railway Station, 23, injury to his brain by falling from the roof of a railway carriage at the London Bridge Station, from a strap breaking whilst packing luggage .. 8 days

Fractures and Contusions (continued):— duration

In London Hospital, labourer, 58, accidentally crushed on the spine by a weight. *

In London Hospital, coal-whipper, 21, erysipelas from a blow from a truncheon on the forehead—given when he attempted to escape from lawful custody. 12 days

In University College Hospital, journeyman sausage maker, 24, the crushing of his right thumb by a sausage-machine—accidental

F. 1 day (no inquest), apoplexy from pressure on the head during birth.

Phthisis and Violence:—

In St. George's Hospital, M. 23 (no inq., p.m.), phthisis. *

ulcers of leg from a kick. 2 months

Wounds:—

In University College Hospital, F. servant, 45, injury of the lungs from a pistol shot accidentally fired into her chest .. 10 days

M. formerly a licensed victualler, 44, suicide by cutting his throat with a razor (in temporary insanity) .. 7 days

M. 1 (no inq., post mort.), lacerated soft palate, caused by falling with a piece of stick in the mouth. 5 days

cynanche tonsillaris. *

Drowning:—

Labourer, 16, accidentally drowned when bathing.

M. 16, found drowned without marks of violence.

M. 15, found struggling in the Thames, and afterwards dead.

F. 15, drowned herself in a temporary state of insanity.

F. 19, drowned herself in a temporary state of insanity.

F. 1, accidentally drowned by falling into a pan of water.

M. probably 20 (profession unknown) found drowned.

Drowning (continued):— duration

M. 37, drowned himself in a reservoir of water at Brixton .. about 10 hours

Hanging and Suffocation:—

No deaths from this cause in abstract.

Burns and Scalds:— duration

Daughter of a smith and farrier, 3, accidentally burnt. *

In University College Hospital, widow 70, accidental burns. *

In London Hospital, F. 57, accidental from burns by the clothes taking fire. 1 day

In London Hospital, widow of a labourer, 60, accidental from burn by the clothes taking fire. 1 day

In St. Thomas' Hospital, brazier, about 75, burnt by his shirt sleeve catching fire from a candle on the floor, whilst searching for some money which he had dropped (at Lewisham) .. 10 days

F. 6 weeks (no inquest), scald of head, neck, chest, and arms .. 4 days

Poison:—

Wife of a hounet-blocker, 55, poisoned herself with oxalic acid in a temporary state of insanity. *

Daughter of a bricklayer, 9 days, laudanum given in castor oil .. 12 hours

The mother had been given castor oil and tinctura opii a month before, and told that it was a dose of castor oil only. She drank only half, and castor oil being afterwards prescribed for the child, she gave half a teaspoonful of the remainder to her, under the belief that it was only castor oil.

In University College Hospital, painter and glazier, 25, suicide with laudanum, while intoxicated with gin—not known to be insane.

Other Violence:—

Night watchman, 45, found dead in an area—death caused by injuries to the head. *

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

KENSINGTON; St. Mary, Paddington. duration

M. 21, smallpox, confluent .. 10 days

St. GEORGE, HANOVER SQUARE; Belgrave.

M. 9, smallpox (not vaccinated) .. 4 days

WESTMINSTER; St. Margaret.

M. 7 wks., smallpox .. *

M. 3, confluent smallpox—exhaustion. 9 days

St. MARTIN-IN-THE-FIELDS; Long Acr.

F. 2, smallpox (not vaccinated) .. 10 days

St. MARYLEBONE; Cavendish-square.

F. 5, smallpox (not vaccinated) .. *

St. PANCAS; Camden Town.

In Smallpox Hospital, M. 26, smallpox, confluent (unprotected). 8 days

In Smallpox Hospital, M. 15, smallpox confluent severe. 11 days

said to have been vaccinated when 3 years old at Pangbourne, Berks—no cicatrix.

St. GILES AND St. GEORGE; South:

M. 1, smallpox .. *

St. George, Bloomsbury.

M. 10 mon., {smallpox .. 9 days
pneumonia. 1 day
first attack—not vaccinated.

HOLBORN; St. Andrew, East.

M. 1, {smallpox .. 14 days
hronchitis .. 2 days
not vaccinated.

EAST LONDON; Cripplegate.

M. 2, smallpox .. *

SHOREDITCH; Holywell and Moorfields.

F. 8, smallpox (not vaccinated) .. 15 days

St. Leonard's.

M. 1, smallpox, (vaccinated at 4 mon. old). 14 days

BETHNAL GREEN; Town.

M. 1, smallpox (nat.—not vaccinated). 10 days

Hackney-road.

F. 1, variola (not vaccinated) .. 9 days

F. 3 mon., smallpox (not vaccinated) .. 7 days

St. GEORGE IN THE EAST; St. Paul.

F. 11 mon., smallpox (confluent). 14 days

vaccinated only 2 days previous to the eruption.

Small Pox (continued):— duration

STEPNEY; Limehouse.

M. 1, variola (not vaccinated) .. 8 days

M. 1, {glandular abscesses .. 3 months
smallpox .. 2 weeks
after vaccination.

Ratcliffe.

M. 9, variola (confluent) not vaccinated. 9 days

POPLAR; Poplar.

F. 9, smallpox confluent (vaccinated) .. 3 days

St. SAVIOUR; Christchurch.

M. 2, smallpox .. 12 days

vaccinated when 6 months old.

BERMONDSEY; St. James.

F. 17, {variola .. 4 days
typhus gravior .. 3 days
not vaccinated.

St. GEORGE, SOUTHWARK; London Road.

M. 2, variola (not vaccinated) .. *

LAMBETH; Waterloo (first part).

M. 2, smallpox (not vaccinated) .. 1 week

GREENWICH; Woolwich Arsenal.

M. 7 weeks, smallpox. 10 days

first attack—vaccinated without effect—no medical attendant.

M. 1, variola .. 7 days

not vaccinated—first attack.

Woolwich Dock Yard.

M. 23, smallpox (first attack—not vaccinated) .. *

Greenwich East.

F. 18, smallpox .. 5 days

vaccinated when 1 month old.

Greenwich West.

M. 6 mon., smallpox (not vaccinated). 12 days

F. 2, smallpox (not vaccinated) .. 2 weeks

St. PANCAS; Gray's-inn-lane.

M. 1, (inq.), sudden after chicken pox. 14 days

not under medical treatment.

Syphilis:—

In St. George's Hospital, M. 22, secondary syphilis and rupia .. *

Malformation:—

M. 6 wks., spina bifida—convulsions .. 3 days

Hernia:—

M. 3 wks., (p. m.) congenital hernia of the diaphragm—asphyxia .. *

M. 10 mon., (p. m.), strangulated inguinal hernia. 4 days

Diabetes:—

No deaths enumerated in the abstract under this head.

Stone:— duration

In Guy's Hospital, {calculus .. *

M. 35, {diseased bladder. *

Childbirth:—

The time elapsing from commencement of labour to death should invariably be returned.

F. 37, peritonitis following protracted labour. 8 days

F. 25, {childbirth .. 5 days
puerperal peritonitis .. 3 days

F. 23, puerperal peritonitis .. *

F. 27, general debility—puerperal peritonitis. 8 days

F. 30, puerperal peritonitis .. 9 days

F. 28, {delivery .. 8 days
puerperal fever .. 6 days

F. 35, (inq.), natural death—exhaustion and peritonitis after childbirth .. 9 days

F. 30, childbirth—puerperal fever on 6th day after delivery

F. 28, influenza—debility after confinement .. 7 days

F. 34, debility after confinement .. 4 days

F. 28, hæmorrhage after delivery. 20 min.

Rupture of the uterus (not stated how produced).—

F. 39, (inq.), sudden from rupture of the uterus .. *

Delirium tremens (with certain cases placed in abstract under other heads):—

M. 44, delirium tremens .. 2 weeks

In St. Bartholomew's Hospital, M. 25, delirium tremens .. *

M. 45, delirium tremens—cerebral effusion of serum .. about 72 hours

M. 57, delirium tremens .. *

M. 36, delirium tremens—phthisis .. *

M. 43, phthisis—delirium tremens .. *

M. 40, bronchitis—delirium tremens .. *

Intemperance:—

M. 48, dropsy, the effect of intemperance *

Privation; Want of Breast-milk, &c.:—

M. 3 weeks, inanition .. 3 weeks

F. 11 days, premature birth—want of breast-milk .. *

Purpura:—No deaths from this cause.

Hæmorrhage, Hæmatemesis, &c.:—

M. 32, (inq.), sudden hæmorrhage from the lungs .. 5 min.

M. 59, hæmatemesis .. 3 days

F. 61, hæmatemesis .. 3 days

Typhus from bad sanitary condition:—

F. 15, {typhus (first attack). 10 weeks
relapse after convalescence .. 15 days

The medical attendant adds that, "the fatal cases of fever which have fallen under his observation, have occurred in houses exceedingly deficient in drainage and ventilation."

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 9; auricrism, 1; disease of heart, 4; chicken pox, 1; childbirth, 1; violence, 43; other specified causes, 15; "found dead," "natural death," "visitation of God," &c., 8—TOTAL, 82 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 43.

NOTE.—In the week ending June 3d, the following case was registered in Rotherhithe:—"A boy, aged 12 years, cholera, duration of illness, 48 hours.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension strong throughout the day except at 3h. p.m. when nothing was shewn.	One-third part of the sky was covered till 5h. p.m. with cirri and light fleecy clouds; it was clear afterwards.
MON.	Nothing was shewn throughout the day.	The sky was generally cloudless till noon. From noon till midnight clouds prevailed but they were very variable in amount; cumuli, cirrostratus, and scud.
TUES.	Nothing was shewn throughout the day except at noon when it was positive with moderate tension.	The sky was nearly cloudless till 6h. a.m., overcast with slight exceptions till 4h. p.m., one-half covered at 6h. p.m., and clear afterwards; cumuli, cirrostrati and scud.
WED.	The same as on the preceding day.	The sky was cloudless till 6h. a.m., again from 10h. p.m. till midnight, and overcast between these times; nimbi, cumuli, cirrostratus and scud. Rain was falling from 2h. 45m. till 5h. p.m.
THURS.	Positive and tension moderate at 9h. a.m. 3h. p.m. and 6h. p.m., nothing was shewn at other times.	The sky was with slight exceptions overcast throughout the day; cirrostratus and scud. Rain was falling at intervals during the afternoon.
FRID.	Negative and active at noon. Positive and tension moderate at 6h. p.m. Nothing was shewn at any other times.	Three-fourths of the sky were covered till 8h. p.m., and clear afterwards; nimbi, cumuli, cirrostratus and scud. Heavy showers of rain fell during the morning.
SAT.	Negative and very active at noon. Nothing was shewn at any other time.	The sky was generally covered till 5h. p.m., with nimbi, cumuli, cirrostrati and scud, and it was clear afterwards. Rain was falling heavily between 4h. and 6h. a.m.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that in which the thermometers are read.

The average temperature for 25 years is furnished by Mr. Henry, Assistant at the Royal Observatory, from the observations made at his residence in the neighbourhood of Greenwich Park, 1845.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 50.9; and the mean reading at 6h. p.m. was 59.3; the mean readings at the Royal Observatory for the same times were 59.2 and 56.6 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JUNE 3, 1848, AS OBSERVED AT BLACKHEATH.—By MR. GLAISHER.

On Sunday, May 28, the temperature of the air early in the morning was 38°; this value increased to 50° by 7h. a.m.; to 73° by 2h. p.m., and decreased to 48° by midnight. On Monday, the temperature early in the morning was 39.5°; this value increased to 78° by 2h. 45m. p.m., and decreased to 59° by midnight. On Tuesday the lowest temperature in the morning was 57°; this value slowly increased to 69° by 2h. p.m., and decreased to 50° at midnight. On Wednesday the temperature early in the morning was 42°; at 1h. 45m. p.m. the value was 70°; and at midnight it was 50°. On Thursday, June 1, the temperature early in the morning was 43.5°; at 1h. p.m. it was 60.5°; and at midnight it was 50°. On Friday during the early morning the temperature did not decline below 50°; at 1h. 45m. it was 66°, and at midnight it was 47°. On Saturday the temperature early in the morning was 43.5°; at 10h. a.m. it was 56°; between this time and 3h. p.m. it alternately increased and decreased, the highest value took place at 1h. 30m., and was 64°; after 3h. p.m. the temperature steadily decreased to 48° at midnight.

The average temperature of the air for each day was as follows:—
Sunday, 55.5; Monday, 58.8; Tuesday, 62.0; Wednesday, 55.8; Thursday, 52.0; Friday, 57.0; and Saturday, 53.0.

The difference of temperature during each day was as follows:—
Sunday, 35.0; Monday, 38.5; Tuesday, 14.0; Wednesday, 27.5; Thursday, 17.0; Friday, 18.0; and Saturday, 22.0.

The range of temperature during the week was 40°.

The average temperature of the Dew Point for each day was as follows:—
Sunday, 47.5; Monday, 50.5; Tuesday, 53.0; Wednesday, 48.5; Thursday, 44.0; Friday, 52.0; and Saturday, 49.0.

The average weight of water mixed with a cubic foot of air was as follows:—
Sunday, 3.8gr.; Monday, 4.3gr.; Tuesday, 4.7gr.; Wednesday, 3.9gr.; Thursday, 3.5gr.; Friday, 4.5gr.; and Saturday, 4.1gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending June 3.	In the Years,							Excess or Deficiency in the week ending June 3, above or below that in the years *						Excess or deficiency in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	59.5	55.2	52.1	56.4	60.0	64.9	56.3	- 3.2	+ 1.1	+ 4.2	- 0.1	- 3.7	- 8.6	- 1.7
Temperature of the Dew Point	49.3	51.6	45.2	51.9	50.9	53.7	50.6	+ 1.3	- 1.0	+ 5.4	- 1.3	- 0.3	- 3.1	+ 0.2
Mean Amount of Water in a Cubic Foot of Air.....	gr. 4.1	gr. 4.5	gr. 3.6	gr. 4.5	gr. 4.4	gr. 4.7	gr. 4.4	gr. + 0.3	gr. - 0.1	gr. + 0.8	gr. - 0.1	gr. 0.0	gr. - 0.3	gr. + 0.1

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1848, June 3, was 3.2 below the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, June 10th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 22.

(The tabular abstract on the first page is for the week ending Saturday, June 10th. The following selection of cases is made from the Returns for the week ending June 3d.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):	duration	Suffocation (continued):—	duration
M. 18, inflammation of the stomach and bowels, caused by an accidental fall on a skittle.... *		M. 49, suicide by cutting his throat with a razor (not known to be insane)	*	M. 18 days, found dead in bed, apparently suffocated by another child 2½ years old.	
Porter 62, natural death, accelerated by falling out of bed	*	Drowning:—		M. 2 months, suffocation by over-laying in bed, the parents being alleged to be drunk.	
M. 63, concussion of the brain by being thrown out of a chaise accidentally..... 10 days		F. 85, found dead in Regent's Canal Basin. Sea-apprentice, 14, accidentally drowned by falling from a boat.		Scalds:—	
M. 20, erysipelas of the brain from a cut, caused by the blow of a staff, feloniously 3 weeks		Suffocation:—		Daughter of a sailor, 3, scalds from upsetting a cup of boiling tea over the neck and chest	4 days
mauslaughter against Patrick and Jerome Coakley, labourers.		F. 5 weeks, accidentally suffocated from being overlaid by the mother when sleeping.		Poison:—	
Wounds:—		F. 7 weeks, suffocation caused by another lying on her in bed.		No deaths ascribed to this cause.	
M. 35, suicide by cutting his throat with a razor *					

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox

duration

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

WESTMINSTER; St. Margaret.

M. 3, small pox—pneumonia 14 days
F. 6, small pox 11 days

ST. MARYLEBONE; St. John's.

M. 6, confluent small pox 6 days
vaccinated with effect 3 years ago.

ST. PANCRAS; Camden Town.

M. 31, small pox, semi-confluent, (unprotected) 22 days
erysipelas 10 days

M. 17, small pox, confluent, modified, 12 days
general erythema from hospital miasm
vaccinated young in Shetland, one small
cicatrix.

F. 18, small pox, confluent, laryngeal 10 days
unmodified—said to have been vaccinated
when young at Harling, Norfolk—no
cicatrix.

The above 3 cases occurred in the Small Pox Hospital.

— The Regent's Park.

F. 1, small pox *
bronchitis—pneumonia 14 days
only seen in articulo mortis.

HOLBORN; St. Andrew, East.

M. 5 months, small pox (not vaccinated) 14 days
F. 2, small pox (not vaccinated) 1 week

— Saffron Hill.

F. 4, variola (not vaccinated) 14 days
inflammation of lungs *

CLERKENWELL; St. James.

M. 11 days, small pox *

EAST LONDON; St. Botolph.

M. 7, small pox 8 days
first attack—vaccinated with effect about
5½ years ago.

M. 3, small pox (not vaccinated—first attack) 11 days

ST. LEONARD, SHOREDITCH; Hoxton New Town.

F. 9 months, small pox (after vaccination) .. *

BETHNAL GREEN; The Town.

F. 4, small pox *
stated to have been vaccinated 2 days
previous to eruption.

WHITECHAPEL; Spitalfields.

M. 1, small pox (not vaccinated) 6 days
F. 4, small pox (not vaccinated) 10 days

ST. GEORGE IN THE EAST; St. Paul.

M. 6, small pox, confluent 9 days
first attack—vaccinated unsuccessfully when
3 months old.

— St. Mary.

F. 10 weeks, small pox 2 weeks
first attack—not vaccinated.

STEPNEY; Shadwell and Wapping.

M. 2, small pox (not vaccinated) 1 week.

— Mile End, Old Town (Upper).

F. 4, small pox 12 days
(vaccinated when 6 months old.)

POPULAR; Poplar.

F. 3, variola (after vaccination) 12 days

ST. SAVIOUR; Christchurch.

M. 6, variola 14 days
vaccinated 5 times in the first year of his
age without effect.

Small Pox (continued):—

duration

BERMONDSEY; St. Mary Magdalen.

F. 6 weeks, small pox (not vaccinated) 5 days

ST. GEORGE, SOUTHWARK; Kent-road.

F. 3, small pox (2nd attack—not vaccinated) .. 8 days

— London-road.

F. 1, variola (vaccinated without effect) *

NEWINGTON; St. Mary.

F. 4 weeks, small pox (vaccinated 17 days) .. 8 days

LAMBETH; Waterloo (first part).

F. 1, small pox 1 month
vaccinated about 3 weeks, but other children
in the family had small pox at the time—
the vaccination went on simultaneously
with eruption of small pox.

— Waterloo (second part).

M. 3, small pox (natural—not vaccinated) 11 days

GREENWICH; St. Paul, Deptford.

F. 26, small pox (first attack—not vaccinated) 7 days
F. 6, variola maligna 5 days
first attack—vaccinated with effect 2 years
ago.

— West.

M. 2, small pox (after vaccination) 2 weeks

WANDSWORTH AND CLAPHAM; Streatham and
Tooting Graveney.

F. 16, small pox 3 months
numerous abscesses, and inflammation of the
trachea *

Syphilis:—

M. 32, venereal disease *

F. 27, syphilis 1 year
phthisis 6 months

Malformation:—

M. 16 days, wasting, apparently from some

malformation.

M. 7 weeks, spina bifida.

F. 21 (inquest), natural death—sudden—
from malformation of the heart (an aperture
admitting venous blood, and thereby caus-
ing asphyxia.

M. 3 days, anus imperforatus, and malforma-
tion of urethra.

F. 6 weeks, spina bifida.

laryngismus stridulus—convulsions 3 weeks

F. 3 weeks, spina bifida.

convulsions from birth

Hernia:—

M. 3 months, rupture 7 weeks

Diabetes:—

F. 58, diabetes long duration

Stone:—No deaths ascribed in the return to this cause.

Childbirth:—

The time elapsing from commencement of labour to
death should invariably be returned.

F. 18, childbirth 5 days

peritonitis 2 days

F. 32, peritonitis puerperal 4 days

F. 23, puerperal fever 24 hours

F. 24, puerperal peritonitis 6 days

F. 22, peritonitis 7 days after childbirth

F. 30, childbirth 1 day—Quercy, 7 days?

gastritis 6 days

peritonitis 3 days

F. 44, childbirth 3 days

peritonitis 2 days

Childbirth (continued):—

duration

F. 37, puerperal fever 1 month

F. 32, premature confinement on board ship, a fortnight
before

in a state of collapse when seen by medical
attendant.

F. 23, convulsions after labour 2 days

disease of brain *

F. 24, puerperal convulsions 6 hours

Mr. Joseph, the Registrar, found, on subsequent
enquiry, that the patient in the above case died un-
delivered; that the Caesarian section was performed
after death, and a dead child extracted. An inquest
was thereupon held.

F. 24 (post mort.), disease of kidneys and

bladder, accelerated by difficult parturition, 20 days

F. 30, phlebitis uteri—peritonitis 6 days

In the above case, "childbirth" should have been added,
if the disease supervened on the puerperal state.

F. 30, inflammation of the deep-seated veins of

the pelvis and womb—and inflammation of

peritonium soon after labour *

Phthisis and Childbirth:—

F. 43, laryngeal phthisis several months

death occurred 3 days after confinement

with a 7 months' child.

Delirium Tremens:—

M. 31, delirium tremens—effusion on the brain, 10 days

M. 37, delirium tremens 5 days

Rheumatic Fever, &c., with Delirium Tremens:—

M. 43, rheumatic fever—pericarditis—pneu-
monia—delirium tremens 21 days

Intemperance:—

M. 47, delirium tremens—ebrietas 7 days

F. 50, intemperance 7 days

delirium tremens 7 days

Privation; Inanition; Want of Breast-milk:—

M. 3 days, inanition *

Purpura:—

M. 44, purpura hæmorrhagica 5 months

Hæmorrhage, Hæmatemesis, &c.:—

M. 47, hæmatemesis 2 days

Miscellaneous Cases:—

In St. George's Hospital, M. 25, large fibrous

tumour of upper jaw 8 years

removal of tumour *

congestion of lungs *

In Waters'-court, { M. 6, scarlatina 24 hours

High-street, { convulsions *

Islington, { M. 10 mon., scarlatina maligna *

{ M. 1, scarlatina maligna *

This is one of the miserable, dirty, confined courts,
which are so numerous between the City-road and
Cattle Market, but are in the immediate neighbourhood
of good and well-built houses.

In St. James', Clerkenwell, M. 3, scarlatina

maligna 48 hours

cerebral congestion—convulsions 30 hours

The third of the same family of the same disease in

6 days.

In King's College Hospital, M. 55 (post mort.),

disease of shoulder-joint, 2 years

hæmorrhage from abscess over sacrum *

M. 52, (a medical officer of St. Mary, Newing-
ton, who caught the infection in the dis-
charge of his duty,) typhus 8 days

In Dreadnought Hospital, M. 50 (post mort.),

phthisis about 5 months

erysipelas 8 weeks

cavity in apex of left lung.

tubercular deposit in both lungs.

old pleuritic adhesions on both sides.

old ulceration of large intestine.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 3; disease of heart, 1; delivery of dead child by caesarian section, 1; violence, 13; other specified causes, 10; "found dead," "natural death," "visitation of God," &c., 7—TOTAL, 35 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 35.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 10th June, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degree Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Negative and active at noon. Positive and tension moderate at 6h. p.m. Nothing was shewn at any other examination.	The sky was generally one-half covered during the day; cirrostratus and scud. Rain was falling at 6h. a.m., at noon, and from 11h. p.m. till midnight.
MON.	Positive and tension moderate at 6h. a.m. Negative and very active at 9h. a.m. Nothing was shewn afterwards.	The sky was overcast till 3h. a.m., one-third part was covered till 6h. p.m., and clear afterwards; cumuli, cumulostrati, cirrostrati, and scud. Rain was falling between 0h. and 3h. a.m.
TUES.	Nothing was shewn till 9h. a.m. Positive and tension variable during the remainder of the day.	The amount of cloud that prevailed between 9h. a.m. and 2h. p.m. was very variable, and the sky was generally clear at other times; cumuli, cirrostrati and scud.
WED.	Nothing was shewn throughout the day.	The sky was cloudless till 6h. a.m., one-half covered till 9h. p.m., and overcast afterwards; cumuli, cumulostrati, cirrostrati, fleecy clouds and scud.
THURS.	Positive and tension weak at 6h. a.m., 3h. p.m., and 6h. p.m. Nothing was shewn at any other time.	The sky was overcast till 7h. p.m., and the amount of cloud was variable afterwards; cirrostrati, fleecy clouds and scud. A shower of rain fell at 10h. 30m. a.m.
FRID.	Positive and tension strong at noon. Moderate tension at 6h. p.m. and weak at midnight. Nothing was shewn at any other times.	The sky was cloudless till 7h. a.m., and overcast during the remainder of the day; cumuli, cumulostrati, cirrostrati and scud. Rain was falling from 9h. 30m. p.m. till midnight. At 9h. 30m. a. m. the upper arc of a solar halo, whose radius was 2°, was visible.
SAT.	Negative and very active at 3h. p.m. Positive and tension moderate at noon, 6h. and 12h. p.m. Nothing was shewn at any other time.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling generally.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JUNE 10, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, June 4, the temperature of the air early in the morning was 43°.5; from 2h. p.m. to 3h. p.m., the value was 66°.5; and after this time the temperature decreased slowly; at 10h. p.m. it was 56°, and at midnight it was 52°. On Monday the lowest temperature in the morning was 49°.2; this value increased to 60°, by 8h. a.m., and to 69° by 1h. p.m.; at midnight the temperature was 50°. On Tuesday early in the morning the temperature was 47°; at 8h. a.m. it was 55°.5; at 0h. 40m. p.m. it was 71°, after this time it decreased, and at midnight was 50°. On Wednesday the lowest temperature was 49°; at 8h. a.m. it was 60°; at 2h. 40m. p.m. it was 69°, and at midnight it was 53°. On Thursday the lowest temperature in the morning was 50°; at 2h. 40m. p.m. it was 66°; at 8h. 0m. p.m. it was 57°, and it was 56°.5 at midnight. Friday the temperature early in the morning was 46°.2; at 8h. a.m. it was 56°.5; at 0h. 30m. p.m. it was 66°; at 8h. 0m. p.m. it was 57°, and it was 56°.5 at midnight. On Saturday the temperature was 53°.5 early in the morning; it was 66°.2 at 1h. p.m., and it was 55° at midnight.

The average temperature of the air for each day was as follows:—
Sunday, 55°.3; Monday, 59°.3; Tuesday, 53°.5; Wednesday, 59°.2; Thursday, 58°.1; Friday, 56°.1; and Saturday, 54°.3.

The difference of temperature during each day was as follows:—
Sunday, 23°.5; Monday, 20°.3; Tuesday, 23°.0; Wednesday, 20°.5; Thursday, 16°.2; Friday, 19°.8; and Saturday, 15°.5.

The range of temperature during the week was 26°.5

The average temperature of the Dew Point for each day was as follows:—
Sunday, 49°.0; Monday, 50°.2; Tuesday, 48°.5; Wednesday, 50°.0; Thursday, 49°.2; Friday, 46°.0; and Saturday, 47°.5.

The average weight of water mixed with a cubic foot of air was as follows:—
Sunday, 4.1gr.; Monday, 4.3gr.; Tuesday, 4.0gr.; Wednesday, 4.3gr.; Thursday, 4.1gr.; Friday, 3.7gr.; and Saturday, 4.0gr.

The following Table shews the comparative Meteorology since the year 1811.

Week ending June 10.	In the Years,							Excess or Deficiency in the week ending June 10, above or below that in the years *						Deficiency in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	64.9	53.6	60.8	57.6	65.5	55.8	57.2	- 7.7	+ 3.6	-3.6	- 0.4	-8.3	+ 1.4	2.5
Temperature of the Dew Point	53.6	48.9	51.7	52.8	56.8	46.2	48.6	-5.0	- 0.3	-3.1	- 4.2	-8.2	+ 2.4	3.5
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	4.7	4.1	4.4	4.6	5.3	3.7	4.1	-0.6	0.0	-0.3	-0.5	-1.2	+ 0.4	0.4

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1848, June 10, was 7.7 below the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, June 17th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 23.

(The tabular abstract on the first page is for the week ending Saturday, June 17th. The following selection of cases is made from the Returns for the week ending June 10th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued):—	duration
In St. George's Hospital, horsekeeper, 32 (post mort.), suppuration in arachnoid membrane of the brain after wound in the head and erysipelas—fell when intoxicated and playfully wrestling with another man in a public-house, in King-st., Marylebone	24 days	Wife of a carpenter, 61, fractured skull by falling down stairs	about 15 min.	In Westminster Hospital, labourer, 32 (post mort.), rupture of the duodenum by falling across the gunwale of a barge, whilst wheeling a barrow of coals on a plank at Thames Bank	3 days
In St. George's Hospital, bricklayer, 32 (post mort.), fracture of leg, ankle, and knee, by falling from a scaffold when at work at the Geological Museum, Piccadilly	42 days	In St. George's Hospital, potman at a public-house, 40 (post mort.), fracture of the skull by falling from an unfinished staircase at Buckingham Palace, when carrying a beer can	10 hours	F. 3 (no inquest), pneumonia following an accidental fall down stairs	1 month
		In St. George's Hospital, F. servant, 65 (post mort.), gangrene after compound fracture of left leg, from slipping off the kerb stone at Kensington	25 days	M. 16, injuries by accidentally falling from the parapet of No. 3, King's-place, where he had gone to attend his pigeons	
				F. 36 (no inq.), paralysis—concussion from a fall	*

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued).—

Fractures and Contusions (continued)	duration	Wounds (continued);—	duration	Burns and Scalds:—	duration
In St. George's Hospital, labourer, 19 (post mort.), rupture of liver and right lung from fracture of rib, from having fallen and being run over by a cart, when endeavouring to stop a horse which had run away 16 hours		Articled law clerk, 20, suicide by shooting himself, at the time labouring under temporary derangement.		In St. Guy's Hospital, widow of a domestic coachman, 61 (post mort.), burns of the back from her clothes taking fire at the grate near which she was scouring 18 days	
Merchant, 46 (p.m.), disease of the lungs, accelerated by a contused wound on the head—thrown from a cart which he was driving in Wyck-street (the horse having fallen), 23 days		Drowning:—		Daughter of a gunner in the Royal Artillery, 8, injuries from being accidentally burnt. . . 36 hours	
13, consolidation of the left lung from concussion of the brain and spine, from being thrown out of a chaise, the horse having run away *		In St. George's Hospital, confectioner, 21 (post mort.), congestion of the lungs from immersion 22 hours		F. 2, accidentally scalded by the falling of a basin of boiled milk..... 8 days	
83 (no inquest), fractured thigh 9 weeks old age.		threw himself into the Serpentine River, Hyde Park, when insane, (under water about 4 minutes.)		F. 1, scalded by the kettle falling from the fire..... 3 hours	
newly born (post mort.), effusion of blood on the brain from injuries received during labour, causing death soon after birth—found dead.		M. 9, drowning—accidentally cast by a barge tow-rope into the water.		Daughter of a smith, 2 (no inq.), scald of the throat..... 6 weeks	
		M. 43, suicide by drowning when insane.		laryngitis *	
		Hanging and Suffocation:—		Poison:—	
		Stone-mason, 84, suicide by hanging, being of unsound mind (suspended 3 hours).		F. 18 (post mort.), essential oil of bitter almonds, bought at two chemists—suicide—not known whether insane..... *	
		M. 53, suicide by hanging himself to the beam of a stable, being of unsound mind.		Other Violence:—	
		Son of a single woman (post mort.), 5 weeks, suffocated—no evidence how caused—found dead in bed with his mother.		F. 25, pulmonary consumption—6 months after amputation of the leg for disease of the ankle following injury.	

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox	duration	Small Pox (continued):—	duration	Phthisis and Childbirth:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		WHITECHAPEL, Artillery.		In the Lying-in-Hospital, F. 30, consumption delivery..... 9 days	
ENSINGTON; Fulham.		M. 9 months, small pox (not vaccinated) *		general exhaustion. *	
1, variola 7 days		STEPNEY; Mile End, Old Town (Upper).		Delirium Tremens:—	
R. LUKE; Chelsea, North-West.		F. 6, variola 3 weeks		M. 51, delirium tremens *	
14 days, small pox 3 days		ST. SAVIOUR; Christchurch.		M. 33, delirium tremens 7 days	
convulsions 8 hours		M. 1, variola (not vaccinated) 11 days		M. 53, delirium tremens 14 days	
not vaccinated.		LAMBETH; Waterloo (first part).		Intemperance:—	
— Chelsea, North East.		M. 5, small pox (after cow pox) *		F. 26, excessive use of spirits—congestion of lungs..... *	
3, small pox (after vaccination)..... *		M. 1, small pox (vaccinated recently without effect)..... 2 weeks		Privation; Want of Breast-milk; Inanition:—	
ESTMINSTER; St. Margaret.		F. 1, small pox, secondary fever 24 days		M. 5 months, want of breast-milk *	
6, confluent small pox—inflammation of lungs (not vaccinated)..... 3 weeks		— Waterloo (second part).		M. 12 days, diarrhoea from indigestible food. . 2 days	
R. MARTIN-IN-THE-FIELDS; Charing Cross.		F. 3, variola 11 days		convulsions 20 hours	
20, small pox..... 10 days		cynanche trachealis..... 2 days		F. 16 days, inanition..... *	
probably inoculated with small pox in Cornwall when very young, the practice prevailing there much at that time, as stated by informant.		— Brixton.		F. 4 months, exhaustion from defective nutrition *	
PANCRAZ; Somers Town.		F. 1, small pox *		Purpura:—	
5, malignant small pox 5 days		GREENWICH; St. Paul, Deptford.		F. 20, purpura hæmorrhagica 6 days	
vaccinated without effect.		M. 1, small pox 14 days		Hæmorrhage, Hæmatemesis, &c.:—	
MALL POX HOSPITAL; Canuden Town.		first attack—not vaccinated.		M. 60, vomiting of blood *	
38, small pox confluent, unprotected 11 days		Syphilis:—		F. 72, hæmatemesis 2 days	
4, small pox confluent, unprotected 9 days		F. 50, secondary syphilis 3 weeks		F. 25, hæmatemesis *	
6, small pox, confluent, unprotected 18 days		Malformation:—		F. 42, hæmorrhage *	
22, small pox, confluent, unmodified..... *		F. 3 days, cyanosis.		Miscellaneous Cases:—	
glossitis *		F. 4 days, supposed internal congenital malformation.		In Waters'-court and Smith's-buildings, Islington, the deaths of 2 boys and 3 girls (children of labourers) at 4 years of age and under, were registered in one week, as caused by scarlatina. Mr. Butterfield, Registrar, adds, that 8 or 10 children in the same localities are suffering from the infection. In the previous week 3 deaths were recorded from the same disease; and Waters'-court, High-street, in which they occurred, was described as being in the worst condition.	
vaccinated young at Stanstead—two large superficial cicatrices.		M. 24, cyanosis from infancy		*In Hoxton New Town, M. 3, cholera..... 6 days	
R. GILES AND ST. GEORGE; St. George, Bloomsbury.		phthisis pulmonalis 1 month		*In Whitechapel (North sub-district) M. 20, cholera 2 days	
3, small pox (natural) 11 days		Hernia:—		F. 3 months, inflammation of membranes of the brain after the operation for soft cataract 14 days	
pneumonia *		In University College Hospital, F. 59 (p.m.), incarcerated umbilical hernia..... *		In St. Thomas' Hospital, M. 8, diseased knee-joint 3 years	
OLBORN; Saffron Hill.		F. 73, strangulated umbilical hernia 10 days		suik after amputation, in consequence of scrofulous cachexia.	
2, small pox (not vaccinated) 4 days		Ulceration and Rupture:—		M. 4 months, traumatic erysipelas after vaccination..... *	
R. LUKE; Whitecross Street.		F. 51, ulceration of some part of intestine, 7 or 8 weeks rupture of intestine..... 21 hours		M. 4 months, cow pox by vaccination—erysipelas supervening on the 12th day. imperfect nourishment.	
9 months, small pox 10 days		Diabetes; Stone:—No deaths enumerated under either of these heads in abstract.		Royal Ordnance Hospital, gunner and driver in Royal Artillery, Woolwich, 24, fistula in ano some months	
IOREDITCH; Holywell and Moorfields.		Childbirth:—		scarlatina—purpura—laryngitis 4 days	
25, small pox 14 days		The time elapsing from commencement of labour to death should invariably be returned.		In Dreadnought Hospital, M. 37 (post mort.), abscess of liver..... *	
1, variola confluent 1 week		F. 38, pleuritis 9 days		dysentery about 9 weeks	
vaccinated a week before, but without effect.		premature labour on 2nd day. 7 days		large abscess, occupying nearly the whole of the right lobe of liver.	
5, variola, confluent (not vaccinated) 7 days		In the Lying-in-Hospital, St. Luke, F. 43, childbirth 5 days		extensive ulceration of large intestine.	
— St. Leonard's.		peritonitis 3 days			
1, small pox (not vaccinated)..... 10 days		F. 31, puerperal fever 4 days			
6, confluent small pox (not vaccinated).... 11 days		F. 31, puerperal fever 10 days			
ETHNAL GREEN; Church.		effusion.			
under 1, small pox (not vaccinated) 8 days		F. 2, nervous exhaustion subsequent to uterine hæmorrhage after delivery 11 days			
— Town.		F. 37, childbirth..... 6 days			
14 days, small pox (not vaccinated) 2 days		convulsions *			
convulsions 12 hours		exhaustion 12 hours			
HITECHAPEL; Spitalfields.		F. 32, exhaustion from premature childbirth. . 2 hours			
2, small pox (vaccinated without effect) .. 9 days		delivery of 6-months twins—one still-born.			

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 6; violence, 25; other specified causes, 12; "found dead," "natural death," "visitation God," &c., 5—TOTAL, 43 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 53.

* In last week (ending June 17), the following cases of CHOLERA were registered:—In sub-district of Hanover-square, M. 51 years, Asiatic cholera (duration of illness 4 hours.) In sub-district of City-road, F. 74 years, cholera (1 week). In Haggerstone West, M. 7 years, cholera (24 hours). In Goodnan's Fields, F. 3 years, cholera (4 hours). In St. Paul's, Deptford, F. 7, English cholera (2 days.)

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 17th June, 1848.

Day.	Phase of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature				Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 7 years	Wind as deduced from Osler's Anemometer.							Mean Amount of Cloud, 0-10	Rain in inches read at midnight																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																														
			Dry			Dew Point	Highest in the sun, as shown by a self-registering Thermometer read at midnight	Lowest on the grass, as shown by a self-registering Thermometer read at midnight	In the Water of the Thames at Greenwich, by the self-registering Thermometer, read at 5 o'clock next morning		Mean from 6	Greatest	Least	General Direction		Pressure in lbs. on the square foot		Amount of Horizontal Movement of the Air in each day

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension strong at each examination.	The sky was about one-half covered with cumuli and light scud till 10h. p.m., and overcast afterwards.
MON.	Nothing was shewn till afternoon. Negative and very active during the afternoon, sparks and galvanic currents were frequent. At midnight nothing was shewn.	The sky was overcast throughout the day, cirrostratus and scud. Between 4h. and 6h. 20m. p.m. a violent thunder storm occurred, the lightning was very vivid, and the thunder followed the lightning at intervals of from 7 sec. to 15 sec.; rain fell in torrents during the whole time.
TUES.	Negative, and occasionally very active between noon and 6h. p.m. Nothing was shewn at any other time.	The sky was generally overcast till 7h. p.m., and cloudless afterwards. Rain was falling frequently during the day. At 4h. 10m. p.m. a violent squall of wind, hail, and rain occurred, and at 4h. 15m. p.m. a gust of 13lbs. pressure on the square foot was recorded.
WED.	Positive, with moderate tension between noon and 6h. a.m. Nothing was shewn at any other examination.	The sky was cloudless till 7h. a.m., and about one-half covered during the remainder of the day; cumulo-strati, cirrostrati, fleecy clouds and scud.
THURS.	At 6h. a.m. and at 3h. p.m. nothing was shewn. At other times positive with variable tension.	One-third part of the sky was generally covered till 10h. p.m., and it was occasionally wholly covered afterwards; cirrostratus, light scud, and fleecy clouds. A lunar halo, whose radius was 32', was frequently visible from 10h. 50m. p.m. till midnight. Several flashes of lightning were visible during the evening.
FRID.	Nothing was shewn till afternoon. Positive, with moderate tension afterwards.	The sky was generally overcast till 9h. a.m., one-half covered till 4h. p.m., variable in amount till 10h. p.m., and overcast afterwards; cirrostrati, fleecy clouds, and scud. Some drops of rain fell between 8h. and 9h. a.m.
SAT.	Positive, and tension strong between 3h. and 6h. p.m. Nothing was shewn at any other examination.	The clouds were much broken between 9h. and 11h. a.m. The sky was otherwise overcast throughout the day; cirrostratus and scud. Rain was falling between 6h. and 2h. a.m.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first class standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.

The readings of the two self-registering thermometers, the one placed in the rays of the sun, and the other placed in grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air at that determined by Mr. Glaisher from his two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.

* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Barge, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 58.8; and the mean reading at 6h. p.m. was 65.5; the mean readings at the Royal Observatory for the same times were 58.4 and 63.8 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JUNE 17, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, the temperature of the air early in the morning was 53° 5; this value increased to 70° 5 by 2h. p.m., and the lowest reading during the day occurred at midnight, which was 52°. On Monday the lowest temperature took place early in the morning, and was 52°; at 7h. a.m. the temperature was 58°; at 11h. a.m. it was 66°; and from this time the value increased and decreased, the highest during the day was 66° 6, and at midnight it was 54°. Between the hours of 4h. 20m. p.m. and 6h. 30m. p.m. a violent thunder-storm took place, the lightning was vivid and frequent, and rain fell during the time to the depth of 1.4 inches. On Tuesday, the lowest temperature during the morning was 53° 5; the highest value reached during the day was 65° at 2h. p.m., and the lowest value during the day was 49° at midnight. On Wednesday, early in the morning, the temperature was 44° 5; at 2h. p.m. it was 69°, and at midnight it was 55°. On Thursday, early in the morning, the temperature was 50°; at 7h. a.m. it was 60°; at 8h. a.m. it was 66° 5; at 10h. 30m. it was 76°, and this value continued with very slight variation till 3h. p.m.; the highest value reached was 77°; at midnight it was 55°. On Friday, the lowest value was 56° early in the morning; at 7h. a.m. it was 65°; at 2h. p.m. it was 76°; and at midnight it was 57°. On Saturday, the temperature early in the morning was 57° 5; at 2h. p.m. it was 71°; and at midnight it was 60°.

The average temperature of the air for each day was as follows:—
Sunday, 60° 2; Monday, 59° 3; Tuesday, 56° 2; Wednesday, 56° 0; Thursday, 63° 5; Friday, 66° 0; and Saturday, 64° 3.

The difference of temperature during each day was as follows:—
Sunday, 20° 5; Monday, 14° 6; Tuesday, 17° 5; Wednesday, 23° 0; Thursday, 27° 0; Friday, 20° 0; and Saturday, 13° 5.

The range of temperature during the week was 31° 5

The average temperature of the Dew Point for each day was as follows:—
Sunday, 51° 5; Monday, 54° 5; Tuesday, 49° 5; Wednesday, 46° 5; Thursday, 53° 5; Friday, 57° 0; and Saturday, 55° 0.

The average weight of water mixed with a cubic foot of air was as follows:—
Sunday, 4.4 gr.; Monday, 4.8 gr.; Tuesday, 4.1 gr.; Wednesday, 3.7 gr.; Thursday, 4.6 gr.; Friday, 5.2 gr.; and Saturday, 5.0 gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending June 17.	In the Years,							Excess or Deficiency in the week ending June 17, above or below that in the years *						Deficient in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	64.7	57.4	62.4	66.4	68.6	55.8	60.8	- 3.9	+ 3.4	- 1.6	- 5.6	- 7.8	+ 5.0	1.8
Temperature of the Dew Point	55.5	53.8	50.2	60.6	57.7	48.4	50.2	- 5.3	- 3.6	0.0	- 10.4	- 7.5	+ 1.8	4.2
	gr.	gr.	gr.	gr.	gr.	gr.	gr.		gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	5.2	4.8	4.2	5.9	5.3	4.0	4.5	- 0.7	- 0.3	+ 0.3	- 1.4	- 0.8	+ 0.5	0.4

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1848, June 17, was 3.9 below the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, June 24th, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 24.

(The tabular abstract on the first page is for the week ending Saturday, June 24th. The following selection of cases is made from the Returns for the week ending June 17th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued)	duration
M. 14, accidentally falling down a trap from a shop into a cellar, while moving a picture frame	*	In St. Bartholomew's Hospital, marble-paper-maker, 59, concussion of the brain and shock of the nervous system, caused by throwing himself from an upper window into Little St. Thomas Apostle	6½ hours	In Guy's Hospital, labourer, 60 (post mort.), wounds of his right leg by a metal casting falling on it, at Holland-street, Blackfriars-road	13 days
Painter, 40, accidentally killed by a fall from a scaffold	*	temporary insanity	*	crystalline exhaustion consequent thereon	9 days
In St. Bartholomew's Hospital, sailor, 55 (post mort.), fracture of the skull and laceration of the brain, from falling down stairs, at White Rose-place, Cripplegate	about 23 hours	M. 1 (no inquest) sickne of the stomach and violent purging from concussion of the brain by a fall	2 months	In Lambeth Workhouse, F. 78, accidental fracture of left thigh by falling, from infirmity	15 days
In St. Bartholomew's Hospital, son of a corn-dealer, 14, fracture of his skull by falling from the parapet of a house in Turk's Head-yard, Clerkenwell	2 hours	F. 25, fall or blow on the head, how caused unknown	*	In St. Bartholomew's Hospital, daughter of a baker, 3 (post mort.), fracture of the skull by a garden-pot falling on her head from the parapet of a house on Bunnett's-hill, Doctor's-commons	2 days
		Labourer, 38, natural death, accelerated by a fall	6 months		

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Fractures and Contusions (continued):— duration

In St. Bartholomew's Hospital, cooper, 32, tetanus, caused by an injury to the muscles between the thumb and the fore-finger of his left hand, by a cask falling on his hand, at Clerkenwell	8 days
In St. Bartholomew's Hospital, apprentice to a piano-forte-maker, 19, bruising of the muscles of the abdomen, and rupture of one of the intestines, by some timber falling on him, at Liquorpond-street	12 hours
In St. Bartholomew's Hospital, lighterman, about 30, inflammation of lungs and pleura, after amputation of his right foot, in consequence of a compound dislocation of his right ankle-joint, from its being entangled in a rope in his barge, near Blackfriars-bridge	1 month
In Guy's Hospital, gas-fitter, 46, erysipelas caused by a wound on his head, from a pot striking him, at Orange-street, Southwark, 9 days	
Farrier, 60, tetanus, resulting from a scalp-wound, by being accidentally thrown out of a cart, at Rotherhithe	7 days
The above placed to tetanus in abstract.	
In St. Bartholomew's Hospital, drayman, 34, injury to his right hand, by a dray-wheel passing over it, at Goswell-street	7 days
delirium tremens	36 hours
In Middlesex Hospital, M. 22 (no inq.), compound fracture of the skull, and injury of the loins	3 weeks

Wounds:—

I. 51, accidental death by a cut on his right toe with an adze	7 days
In St. Bartholomew's Hospital, wheelwright, 47 (post mort.), unknown—wound on the neck, left breast, both arms and both thighs, inflicted by himself with a pen-knife, but not sufficient evidence of the cause of death	a few hours

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.	
CHELSEA; South.	
I. 21, small pox (not vaccinated)	15 days
phthisis	35 days
— North West.	
I. 3, small pox (confluent)	1 week
I. 8, small pox (confluent)	11 days
T. GEORGE, HANOVER SQUARE; Belgrave.	
I. 14, malignant small pox (not vaccinated) ..	*
The Registrar states that the deceased was one of 8 children in a family all laid up with small pox at the time. The parents refused, from prejudice, to have them vaccinated.	
VESTMINSTER; St. Margaret.	
I. 2, variola (not vaccinated)	1 week
I. 3, confluent small pox (not vaccinated) inflammation of lungs	12 days
I. 3, small pox (vaccinated)	11 days
I. 2, confluent small pox (vaccinated) inflammation of lungs	1 week
I. 4, variola (not vaccinated)	12 days
I. 2, small pox (not vaccinated)	*
T. PANCRAS; Tottenham.	
I. 10 mon., small pox (natural) exhaustion ..	21 days
— Gray's Inn Lane.	
I. 3, variola (not vaccinated)	10 days
I. pneumonia	3 days
— Somers Town.	
I. 2 mon., small pox (natural)	10 days
ALL POX HOSPITAL; Camden Town, sub-district.	
I. 37, small pox, confluent, modified	20 days
I. erysipelas and hospital fever	5 days
believed that he had been vaccinated at Amersham, Bucks, (no cicatrix).	
I. 18, small pox, confluent, unprotected	8 days
I. 23, small pox, confluent, modified	25 days
vaccinated young at Shiere near Guildford, one cicatrix scarcely perceptible.	
I. 19, small pox, confluent, unprotected	12 days
I. 21, small pox, confluent, unprotected	9 days
I. 11, small pox, confluent, unprotected	13 days
PERBORN; Saffron Hill.	
I. 3, small pox	4 days
I. convulsions	3 days
I. 3, small pox (not vaccinated)	*
cancerous oris and mortification of the face	
—	
LOREDITCH; Holywell and Moorfields.	
I. 3, variola, confluent (after vaccination)	3 weeks
— St. Leonard's.	
I. 2, small pox	6 days
unsuccessfully vaccinated at 2 months.	
I. 2, small pox (without previous vaccination). 14 days	
— Ilaggerstone, West.	
I. 11 mon., small pox	15 days
vaccinated at the age of 3 months but did not rise well.	
I. variola	4 days
I. convulsions	6 hours
vaccinated at the age of 5 weeks with effect.	
THNAL GREEN; the Green.	
I. 2, small pox (not vaccinated)	9 days
— Hackney-road.	
I. 3, small pox (not vaccinated)	9 days
I. confluent small pox	5 days
vaccinated a year ago—small cicatrix left.	

Wounds (continued):—

In Guy's Hospital, labourer, about 29, erysipelas brought on by wounds in his forehead, but no sufficient evidence how these wounds were caused	15 days
M. 85 (no inquest), phlegmonous inflammation from a splinter in the finger	6 days
gangrene	24 hours
M. 23 (post mort.), suicide by shooting himself, being at the time of unsound mind (under water about 24 hours.)	
Drowning:—	
Errand boy, 16, accidentally drowned while bathing in the Grand Junction Canal.	
Son of a shoe-maker, 9, accidentally drowned while bathing in the Grand Junction Canal.	
Son of a shoe-maker, 13, accidentally drowned while endeavouring to assist his brother, who was being drowned in the Grand Junction Canal.	
Carman, 36, drowned—was dipping for water with a pail without a rope, and over-reached himself, in the Grand Junction Canal.	
M. (person and age unknown) drowned in the Grand Junction Canal; not known how he came into the Canal (had been there probably a fortnight)	
F. 32, suicide by drowning (of unsound mind).	
Son of an engine-driver, 15, accidentally drowned while bathing.	
Daughter of a carpenter, 1, accidentally drowned by falling into a tub of water.	
Wife of a labourer, 43, found struggling in Regent's Canal, and afterwards found dead; cause unknown.	
Sea boy, 14, accidental by falling from the maintop of a vessel into the waters of the West India Dock.	
Mate of a sailing barge, 23, found drowned in the Thames—no marks of violence.	
Baker, 32, affection of the brain, accelerated by throwing himself into the water of a ditch, being of unsound mind at the time.	

duration

Hanging and Suffocation:—

Wife of a fancy-work knitter, 27, suicide by hanging, being insane.	duration
M. 40, hanging himself in a temporary state of insanity.	
Single woman, 35, hanged herself in a temporary state of insanity.	
F. 6 weeks, suffocation, but not from the violence of any person, to the knowledge of the jury.	
In St. Bartholomew's Hospital, warehouseman, 46 (post mort.), suffocated by a piece of meat which he was eating passing down into the right lung	30 minutes
F. 20 days (post mort.), suffocation, accidentally caused when laid to sleep in bed with her father and mother (found dead).	

Burns and Scalds:—

In St. Bartholomew's Hospital, M. 29, burnt by falling on the fire in a fit, at White's-alley, Moorgate-street	11 weeks
In St. Bartholomew's Hospital, shoe-maker, 78, burnt by falling against the fire in his room, at Angel-alley, Bishopsgate	6 days
F. 2, scalds	*

How caused should have been stated.

Poison:—

M. 52, suicide by laudanum, when insane ..	43 hours
M. 1, poisoned with arsenic, which was given to it for magnesia, from mistaking two papers in a cupboard	2 hours
Victualler, 44, taking oxalic acid in temporary insanity	*
The following case was enumerated under Gastritis:—	
Daughter of a paper-marbler, 6 (inquest), sudden death from inflammation of the stomach—accelerated by pressure on the stomach by a child	*

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox (continued):—

WHITECHAPEL; Spitalfields.	duration
F. 4, small pox (not vaccinated)	8 days
— Artillery.	
F. 4, mon., small pox, diarrhoea	14 days
— Goodman's Fields.	
F. 24 days, small pox (not vaccinated)	*
ST. GEORGE IN THE EAST; St. Paul.	
M. 5, small pox	10 days
first attack—vaccination attempted 2 years ago without effect.	
STEPNEY; Shadwell and Wapping.	
M. 5, small pox, (not vaccinated)	*
— Mile End, Old Town (Upper).	
M. 10 wks., small pox (not vaccinated)	*
POPLAR; Poplar.	
M. 5, mon., variola (natural—not vaccinated) 5 days	
ST. SAVIOUR; St. Saviour.	
F. 3, variola (not vaccinated)	13 days
ST. OLAVE; St. Olave and St. Thomas.	
M. 2 wks., small pox	4 days
BERMONDSEY; St. Mary Magdalen.	
F. 8 mon., small pox (not vaccinated)	*
GREENWICH; St. Paul's, Deptford.	
M. 7, variola	7 days
first attack—vaccinated with effect 2 yrs ago.	
— Greenwich East.	
M. 8, small pox	2 weeks
vaccinated in infancy.	
— Greenwich West.	
M. 3, variola, confluent (not vaccinated)	12 days
LEWISHAM; Lee.	
F. 1 mon., confluent small pox	*

Chicken Pox:—

CITY OF LONDON; North West.

M. 2, varicella—cynanche tonsillaris

Syphilis:—

F. 11 mon., secondary syphilis	5 months
no medical attendant for last month.	

Malformation:—

M. 1 mon., spina bifida.	
M. 5 mon., exhaustion from defective palate and harelip.	
F. 15, days, asphyxia, from malformation of the heart.	
F. 3 mon., malformation of palate and lip—marasmus.	
F. 4 days, malformation of rectum.	
F. 4 days, cyanosis.	

Hernia:—

In Middlesex Hospital, M. 47, strangulated femoral hernia	*
M. 71, (inquest), natural death—sudden from inflammation from a rupture	*

Diabetes:—

M. 29, diabetes	*
M. 40, diabetes	*

Stone:—

M. 75, (post mort.) apoplexy—having long suffered from stone in the bladder	*
---	---

Childbirth:—

The time elapsing from commencement of labour to death should invariably be returned.

F. 23, puerperal fever	24 hours
F. 35, puerperal peritonitis	3 days
F. 20, childbirth	2 days
peritonitis	2 days
F. 27, childbirth	6 days
scarlet fever	4 days
F. 25, puerperal peritonitis	6 days after labour
F. 27, childbirth—puerperal fever	4 days
F. 24, delivery	4 days
inflammation and sloughing of vagina.	
F. 32, childbirth	6 days
F. 39, exhaustion after delivery, from previous hæmorrhage	*

Other Cases of Childbirth:—

F. 32, ague	4 months
premature labour	7 weeks
bronchitis	5 weeks
F. 38, disease of the heart	*
erysipelas	*
childbirth	6 weeks previously

Delirium Tremens:—

M. 32, delirium tremens	*
M. 29 (inq.), delirium tremens	2 days
F. 48, delirium tremens	*

Intemperance:—

No deaths ascribed in abstract to this cause.

Privation:—

M. about 6 weeks (inq.), parents unknown, starvation and exposure, by a person or persons unknown.	
In King's College Hospital, F. 29 (post mort.), debility from rheumatism and starvation ..	*
gangrene of leg from arteritis	8 days

Want of Breast-milk; Inanition:—

M. 6 month, wasting from want of the mother's milk	from birth
F. 5 months, diarrhoea from want of breast-milk	*
F. 4 months, debility from early weaning ..	*
M. 11 days, inanition	from birth

Purpura:—

No deaths ascribed to this cause in abstract.

Hæmorrhage, Hæmatemesis, &c.:—

F. 52, hæmorrhagia	about 2 years
F. 75, hæmorrhage—diarrhoea	12 days
F. 6 months, hæmorrhage from bowels	*
M. 26 (inq.), natural, from rupture of a vessel in the lungs	sudden
F. 23 (inquest), rupture of a blood vessel ..	sudden
M. 72, atrophica sculis	2 years
hæmatemesis	sudden

Miscellaneous Cases:—

F. 44 (inquest), natural, after sudden purging and vomiting (not attended medically) ..	*
In King's College Hospital, M. 55, acute laryngitis	67 hours
tracheotomy	13 hours
In St. Thomas's Hospital, F. 47 (post mort.), chronic laryngitis	*
tracheotomy	3 months
bronchitis	*
In Dronchought Hospital, M. 24 (post mort.), ulceration and caries of elbow-joint after an injury	7 months
albuminuria	6 weeks
phthisis—general tuberculosis—granular kidneys.	

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 6; other rupture of vessels, 2; ossification of the heart, 1; other disease of the heart 5; privation, 1; violence, 44; other specified causes, 11; "found dead," "natural death," "visitation of God," &c., 15—TOTAL, 85 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 40.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 24th June, 1848.

Day.	Phase of the Moon	Mean height of the barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension strong, from noon till 6h. p.m. Negative and active at midnight.	The sky was mostly overcast throughout the day; cirrostratus and scud. A shower of rain fell at 2h. 10m. p.m., and rain was falling steadily from 11h. p.m. till midnight.
MON.	Nothing was shewn till 6h. p.m. Positive and tension weak afterwards.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling at intervals during the morning.
TUES.	Positive and tension moderate from noon till midnight. Nothing was shewn previous to noon.	The sky was overcast throughout the day except between 10h. and 11h. p.m., between which times the clouds suddenly disappeared; cirrostratus and scud. Thin rain was falling occasionally between 6h. a.m. and 9h. a.m.
WED.	Positive and tension strong throughout the day.	The sky was overcast till 3h. p.m., and the amount of cloud was variable afterwards. Cumuli, fleecy clouds and scud.
THURS.	Positive and tension strong till 6h. p.m. At midnight nothing was shewn.	The sky was generally cloudless till 11h. 30m. p.m. and overcast afterwards with thin cirrostratus.
FRID.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling heavily between 6h. p.m. and 9h. p.m.
SAT.	Positive and tension variable between noon and 3h. p.m. Nothing was shewn at any other time.	The sky was overcast till 10h. a.m., one-third part was covered till 6h. p.m., and overcast afterwards; cumuli, cirrostratus and scud. Rain was falling from 11h. p.m. till midnight.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JUNE 24, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, the lowest temperature during the day occurred early in the morning, and was 57°; this value increased to 68° by 4h. p.m., and decreased to 58° by midnight. On Monday, the temperature early in the morning was 54°·5, and this value continued without change till after 8h. a.m.; it then decreased; at 10h. a.m. it was 52°·5; this value then slowly increased; the highest value during the day was at about 4h. p.m., and was 64°·5; at midnight the value was the lowest during the day, and was 52°·5. On Tuesday, till 7h. a.m., the temperature was without change, and was 52°; it then increased slowly till at about 4h. p.m., when it was 60°, and it was 52° at midnight. On Wednesday, early in the morning, the temperature was 51°·5; this value then slowly increased till 5h. 10m. p.m., at which time the highest value during the day took place, and was 74°; at midnight the value was 61°. On Thursday, the lowest value early in the morning was 52°·5; at 2h. p.m. it was 79°, and it was 55° at midnight. On Friday, the temperature early in the morning was 56°; this value increased rapidly during the morning, and at 9h. 30m. a.m. it was 72°, which was the highest value during the day; after this time the temperature decreased slowly to 59° by midnight. On Saturday, the lowest temperature during the early morning was 57°; a little after noon the value was 68°·5, and the lowest value occurred at midnight, viz. 55°.

From the preceding account it will be seen that the turning points of temperature have occurred at different times nearly on every day during this week, from their usual time.

The average temperature of the air for each day was as follows:—
Sunday, 60°·6; Monday, 57°·5; Tuesday, 57°·5; Wednesday, 60°·2; Thursday, 63°·8; Friday, 62°·0; and Saturday, 59°·7.

The difference of temperature during each day was as follows:—
Sunday, 11°·2; Monday, 10°·0; Tuesday, 15°·0; Wednesday, 21°·5; Thursday, 26°·5; Friday, 16°·0; and Saturday, 13°·5.

The range of temperature during the week was 27°·5

The average temperature of the Dew Point for each day was as follows:—
Sunday, 55°·5; Monday, 51°·5; Tuesday, 51°·0; Wednesday, 53°·0; Thursday, 51°·8; Friday, 57°·0; and Saturday, 54°·5.

The average weight of water mixed with a cubic foot of air was as follows:—
Sunday, 5.0 gr.; Monday, 4.5 gr.; Tuesday, 4.4 gr.; Wednesday, 4.7 gr.; Thursday, 4.5 gr.; Friday, 5.3 gr.; and Saturday, 5.0 gr.

The following Table shews the comparative Meteorology since the year 1841.

The following Table shews the comparative Meteorology since 1842.																
Week ending June 24.	In the Years,							Excess or Deficiency in the week ending June 24, above or below that in the years *						Deficiency in the year 1847		
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847			
Temperature of the Air	61.0	56.8	62.6	60.4	66.8	56.8	60.2	- 0.8	+ 3.4	- 2.4	- 0.2	- 6.6	+ 3.4	0.0		
Temperature of the Dew Point.....	54.6	51.0	54.2	54.7	57.6	50.4	53.5	- 1.1	+ 2.5	- 0.7	- 1.2	- 4.1	+ 3.1	0.0		
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.		
Mean Amount of Water in a Cubic Foot of Air.....	4.9	4.4	4.8	4.9	5.3	4.5	4.7	- 0.2	+ 0.3	- 0.1	- 0.2	- 0.6	+ 0.2	0.0		

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1848, June 24, was 0.8 below the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, July 1st, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

	Females	458		Females	552		Females	769
	Total	943		Total..	1100		Total..	1552

* The age of a man whose death was ascribed to fracture, is not stated.

† No return has been received this week from the sub-district of Cavendish Square, in consequence of the office of Registrar being vacant. Averages (namely births and 3 deaths) have been taken instead thereof, the 3 deaths being placed to the head of causes not specified.

NOTE.—The increase in the number of deaths registered in the last week is caused by an accumulation of Coroner's Cases, many of which occurred in a previous part of the quarter, but were not registered till the end of it. The whole number of inquests registered in 13 weeks, was 716; the weekly average is therefore 55. The inquests registered last week were 164. By deducting 109 (viz. 164—55) from 1100 the total deaths registered, 991 deaths are obtained as the result, which may be considered an approximation to the actual number of deaths which occurred in the week.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 25.

(The tabular abstract on the first page is for the week ending Saturday, July 1st. The following selection of cases is made from the Returns for the week ending June 24th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued)	duration
In Charing Cross Hospital, carpenter, 57 (post mort.), hemorrhage into the cavity of abdomen, from perforation of lungs and liver by fracture of ribs—fell when at work at an unfinished house, at Manor-park, Streatham.	4 days	Ericklayer (pauper in the workhouse) 74, accidental fall from a ladder.	*	M. 27, accidental death from the fall of a sugar loaf on his head.	
F. 76 (no inq.), mortification in the back produced by a fall.	*	Perrier, 45, accidental death from a fall, and injuries received in carrying sacks of potatoes	3 months ago	Wounds:—	
		Son of a baker, 5 months, from a fall, caused by the accidental fall of his mother	3 days	In Hyde Park Barracks, private in 2nd Life Guards, 23, pistol-shot wound through the body—suicide in temporary insanity, whilst in confinement in the black hole (found dead)	instantly

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Drowning:—	duration	Hanging and Suffocation:—	duration	Poison:—	duration
Labourer, 18, drowned by getting out of his depth, being unable to swim.		Seaman, 60, hanged himself with a cord to the rafter of a wash-house—in temporary insanity.		In Westminster Hospital, wife of a packer, 48 (p.m.), oil of vitriol—suicide in temporary insanity.....	11 weeks
Maker of cane-chair bottoms, 59, drowning—was an habitual drunkard, and had often threatened suicide.		Son of a general dealer, 6, strangulation—wilful murder against some person unknown.		The following case was classed under disease of brain:—

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension moderate at 6h. p.m. Nothing was shewn at any other time.	The sky was overcast till 10h. 30m. p.m. and one-half covered afterwards; cirrostratus and scud. Rain was falling frequently during the morning.
MON.	Nothing was shewn till 6h. p.m. Positive and tension weak afterwards.	The sky was generally overcast throughout the day; cirrostratus and scud. Rain was falling from 9h. a.m. till 11h. a.m.
TUES.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Thin rain was falling between 4h. and 6h. p.m.
WED.	Nothing was shewn throughout the day.	The sky was, with slight exceptions, overcast till 9h. p.m., and one-half covered afterwards.
THURS.	Positive and tension weak at 9h. a.m. and at 6h. p.m. Nothing was shewn at any other time.	The sky was overcast till 9h. a.m., generally one-half covered till 9h. p.m., and clear afterwards; cumuli, cirrostrati and scud. Rain was falling from 5h. a.m. till 6h. a.m. steadily, and at intervals afterwards during the morning.
FRID.	From 1h. 26m. p.m. till 1h. 37m. p.m. positive and negative electricity were alternately shewn. Nothing was shewn afterwards till 6h. p.m. From 6h. p.m. till midnight positive with variable tension.	The sky was covered with cumuli, cirrostrati, and scud, till 3h. p.m. The amount of cloud was variable till 6h. p.m. and clear afterwards. From 1h. 26m. till 1h. 40m. p.m. rain was falling heavily.
SAT.	Nothing was shewn till noon. Positive and tension strong during the remainder of the day.	The sky was cloudless till 7h. a.m.; it was afterwards covered till 10h. p.m., and generally clear till midnight; cumuli, cirrostrati, and scud. Slight showers of rain fell at intervals during the morning and afternoon.

The height of the eistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.
The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.
The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.
* In reading the 10th column, it will be borne in mind that + is read "Higher," and - "lower," than the average.
The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 56.0; and the mean reading at 6h. p.m. was 62.1; the mean readings at the Royal Observatory for the same times were 55.5 and 61.6 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JULY 1, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, June 25, early in the morning, the temperature of the air was 53.4; from 1h. p.m. to 3h. p.m. the temperature was 63.0; after this time it increased to 67.5; at 6h. p.m. it was 62.0; at 8h. p.m. it was 60.5; and it was 57.2 at midnight. On Monday, early in the morning, the temperature was 54.5; this value increased very slowly during the morning; at noon it was 59.0; at 3h. p.m. it was 65.0; between this time and 4h. p.m. the highest reading occurred, viz. 68.0; and at midnight the value was 59.0. On Tuesday, early in the morning, the temperature was 54.5; at 7h. a.m. it was 59.0; at 11h. 30m. a.m. the highest value occurred, viz. 69.0; and at midnight it was 59.0. On Wednesday, early in the morning, the temperature was 53.5; at 1h. p.m. it was 71.9; and at midnight the lowest value occurred, viz. 53.7. On Thursday, early in the morning, the temperature was 52.0; at about 1h. p.m. it was 67.0; and it was 48.0 at midnight. On Saturday, July 1, early in the morning, the lowest temperature of the air during the day was 43.0, and at this time the reading of a thermometer placed on grass read 33.0, and vegetation in the open country was subjected to a temperature below the freezing point of water; at 0h. 30m. p.m. the temperature of the air was 62.0; and it was 49.5 at midnight.

The times at which the temperature of the air turned to increase or decrease during this week have been variable, and generally at different times from their usual times.

- The average temperature of the air for each day was as follows:— Sunday, 53.7; Monday, 59.4; Tuesday, 59.7; Wednesday, 60.3; Thursday, 60.2; Friday, 55.7; and Saturday, 51.95.
 - The difference of temperature during each day was as follows:— Sunday, 14.4; Monday, 13.7; Tuesday, 14.5; Wednesday, 14.5; Thursday, 17.5; Friday, 19.5; and Saturday, 19.0.
 - The range of temperature during the week was 28.0.
 - The average temperature of the Dew Point for each day was as follows:— Sunday, 56.5; Monday, 54.5; Tuesday, 55.5; Wednesday, 52.5; Thursday, 53.0; Friday, 46.5; and Saturday, 42.5.
 - The average weight of water mixed with a cubic foot of air was as follows:— Sunday, 5.2gr.; Monday, 4.8gr.; Tuesday, 5.1gr.; Wednesday, 4.5gr.; Thursday, 4.7gr.; Friday, 3.8gr.; and Saturday, 3.4gr.
- The following Table shews the comparative Meteorology since the year 1841.

Week ending July 1.	In the Years,							Excess or Deficiency in the week ending July 1, above or below that in the years *						Deficiency in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	61.6	57.1	58.8	58.1	60.6	61.6	57.9	- 3.7	+ 0.8	-0.9	-0.2	-2.7	-3.7	1.7
Temperature of the Dew Point.....	52.5	50.1	52.8	52.6	52.6	54.1	51.6	-0.9	+ 1.5	-1.2	- 1.0	-1.0	-2.5	0.8
	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>	<i>gr.</i>
Mean Amount of Water in a Cubic Foot of Air.....	4.6	4.2	4.6	4.6	4.5	4.8	4.5	-0.1	+ 0.3	-0.1	-0.1	0.0	-0.3	0.1

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1843, July 1, was 3.7 below the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, July 8th, 1848.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 26.

(The tabular abstract on the first page is for the week ending Saturday, July 8th. The following selection of cases is made from the Returns for the week ending July 1st.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
F. 40, of independent means, suicide by throwing herself from a window (of unsound mind).....*		M. 14, crushed on the chest by an omnibus-wheel when trying to escape from a cab... 30 minutes		Son of a painter, 14, accidentally drowned by falling from a boat when sculling.	
F. servant, 45, injury of the brain from falling down stairs in an epileptic fit.....*		Son of a fly proprietor, 8, accidentally run over by a cabriolet and one horse..... instant		M. 49, drowned himself in a temporary state of insanity in a water butt.	
In St. George's Hospital, bricklayer, (age not stated) (post mort.), secondary deposit in lungs; compound fracture of right leg; fell when at work on a step-ladder at Chelsea, from the breaking of the ropes of the ladder..... 10 days		In King's College Hospital, oilman, about 74, exhaustion from fracture of thigh and collar-bone; knocked down and run over by an ice cart when crossing High Holborn... 24 days		M. 21, drowned; no marks of violence sufficient to cause death—no proof how he came into the water (about 24 hours in water).	
In St. George's Hospital, M. mendicant, about 40 (post mort.), fracture of the skull—not sufficient evidence how caused—fell on his back on being pushed out of a shop in Westminster-bridge-road, and afterwards fell on his back in a fit in Hyde-park... 6 hours		In London Hospital, labourer, 36, accidentally killed by the falling of a chain on his face, 1 day		M. 8, drowned whilst at play, in reaching after a stick in the river (under water 4 days).	
In St. George's Hospital, labourer, 50 (p.m.), fracture of the skull by falling from a flooring at a builder's yard, when putting away scaffold poles..... 4 hours		In London Hospital, labourer, 40, accidentally killed by the fall of a wall after a fire... 1 day		Son of a tailor, 13, drowned by dropping from a barge to which he was clinging, in consequence of a boat drifting away from under him (under water 5 days).	
M. 11, fell on his head from a scaffold by missing his step, trying to descend a ladder, about 1 hour		In London Hospital, lighterman, 48, accidental fall of a cask, causing fracture of skull... *		M. 5, drowned whilst trying to get on some logs of wood that were floating in the river (under water 4 days).	
In King's College Hospital, porter, 47 (p.m.), fracture of the base of the skull by falling from a ladder when cleaning a window, in Exeter-street, Strand..... 9 days		M. 35, crushed by some heavy landing stones falling on his chest, whilst unloading the "Pirate," of Poole..... instant		M. supposed a seaman, about 18, found in the Thames; drowned—no marks of violence—no sufficient proof how he came into the water..... 1 month	
In London Hospital, carpenter, 56, accidental by a fall from a flight of stairs..... *		In Middlesex Hospital, carman, 55, delirium tremens, after injury of the leg, from the falling of a crate of goods from its hooks on being hoisted..... *		Carpenter, 19, accidentally drowned, going into the Thames to bathe (in water 25 minutes.)	
In London Hospital, brewer's man, 63, accidental fall—fractured leg..... 30 days		M. 48, fracture of his skull and injury of his brain, by the explosion of a cylindrical oven heated by hot water, for the purpose of roasting coffee..... instant		Son of an iron-founder, 13, drowning—no sufficient evidence how he came into the water—(submerged 2 hours).	
In London Hospital, labourer, 43, accidental fall down a ship's hold—fractured spine... 2 days		In London Hospital, labourer, 37, natural—tetanus from injury of the leg, of 4 years' standing—(placed in abstract to tetanus).			
Carman, 45, accidentally run over by a waggon, and killed on the spot—head crushed.		M. 26, killed in a fight—verdict manslaughter against Thomas Goode.			
In London Hospital, carman, 18, accidental, from being run over by a waggon he was driving.					
Widow of a printer, 65, fracture of ribs, from being knocked down and run over by the wheel of a van, which she was endeavouring to pass, in the very narrow part of Carpenter-street, not being observed by the driver..... 38 hours		Wounds:—			
In St. George's Hospital, son of a labourer, 3, internal injuries; ran suddenly from the kerb stone as a cart was passing, in Simmons-street, Chelsea, the wheel of which went over him..... 8 hours		Surgeon, 38, delirium tremens; wound in the throat inflicted by himself with a table knife, when of unsound mind..... 3 days			
In Middlesex Hospital, carman, 38, fracture of skull and other injuries, by falling from a van..... *		F. 51, cut her throat—insane—with suicidal intentions for many months (not under restraint).			
In Middlesex Hospital, wife of a Turkish Chargé d'Affairs, 80, injury of the leg from being knocked down by a cabriolet, when crossing a road..... *		Merchant, 47, pistol shot through his brain, inflicted by himself in temporary mental derangement..... instant			
In Middlesex Hospital, wife of a gas-fitter, 45, rupture of the heart—a private carriage-wheel passed over her chest, she having fallen, as if giddy, from the pavement on to the road, when it was passing..... 2 hours					
In Middlesex Hospital, daughter of an iron-smith, 6, crushing of the belly by a van wheel, under which she fell, while running away from play in the street..... 28 hours		Drowning:—			
In the Work-house, Rectory, Marylebone, carman, 85, injury from a brewer's dray, not observing it when sweeping a crossing, and being rather deaf..... 2 weeks		Son of a farrier, 6, drowning—no evidence how he came into the water; supposed to have fallen in when playing with a floating cork (under water about 15 minutes.)			
		Tailor, 29, drowned whilst swimming when intoxicated (under water about 2 minutes).			
		M. pauper, formerly a servant, 32, drowning—not known how he came into the water—was of unsound mind.			
		F. 27, found drowned in the Regent's Canal.			
		M. about 25, drowned in the Regent's Canal, whether accidentally or otherwise unknown (found dead).			
		Son of a groom, 4, drowned; no evidence how he came into the tank—supposed to have been reaching for a stick—found dead without marks of violence.			
		M. 15, drowned by falling out of a barge (under water about 3 hours).			
		Son of a musician, 12, drowned, but no evidence how he came into the water (about ½ an hour under water).			
		M. 18, accidentally drowned in St. Katharine's Dock.			
		M. about 13, found dead without marks of violence in the Thames—apparently drowned.			
				Burns and Scalds:—	
				In St. George's Hospital, son of a stableman, 5, burns of the body from clothes taking fire—supposed to have been playing with lucifer matches..... 21 hours	
				Widow of a harouet, 78, burns of the neck and chest from her clothes taking fire (supposed from a candle)..... 14 days	
				In King's College Hospital, single woman, 18 (post-mort.), burn of the back and arm from her clothes and the bed clothes taking fire, at No. 3, Red Lion-court, supposed from a candle..... 23 days	
				F. 14, burnt by some straw taking fire in a chaise-cart, in which she was riding at Edmonton..... 19 days	
				Son of a fellowship porter, 1, scalded by the upsetting of a pail of hot water..... 4 days	
				M. 6 months, scalded by the overturning of a kettle, containing hot water..... 3 days	
				Daughter of a carpenter, 3, accidentally scalded by the fall of a saucepan of boiling water... 5 days	
				In Middlesex Hospital, son of a cab-builder 1, scalds—fell out of a high chair in front of a fire without a guard, upsetting a saucepan, 1 day	

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Poison:—	duration	Poison:—(continued):—	duration	Poison (continued):—	duration
Son of a solicitor's clerk, 6 days, Dover's powder and mercurial chalk, intended for deceased's mother, and administered by mistake by a nurse	21 hours	M. 11 months, opium digitalis given as a medicine	14 hours	Daughter of a mariner, 19, poisoned herself with arsenic in a temporary state of insanity, 7 hours	7 hours
In Middlesex Hospital, porter at a pastry cook's, 25, suicide by essential oil of bitter almonds (not known to be insane)	30 minutes	M. 25, suicide with prussic acid (in unsound state of mind)	*	F. 81, drinking of a liquid, containing arsenic for destroying bugs, &c.	4 hours
F. servant 32, suicide with oxalic acid (not known to be insane)	*	M. 24 hours, small quantity of landanum accidentally mixed with its food in a cup, which had contained landanum, and had not been washed out	18 hours	Wife of a potman, 22, suicide by drinking fly-water, containing arsenic (in temporary aberration of mind)	5 days
Farrier, 52, suicide by corrosive sublimate	*	M. 17 (post mort.), effects of opium, but under what circumstances taken no evidence, several hours		Other Violence:—	
Chemist and druggist, 24, suicide with prussic acid—of unsound mind.		F. 2, swallowing some cyanide of potassium, given to it by a child 6 years old	a few minutes	M. 39 (no inquest, post mort.), pneumonia	3 days
				In London Hospital, labourer, 66, injury of leg, bow caused no evidence	*
				In Guy's Hospital, M. 23 (no inquest), injury to the spine	*

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox	duration	Small Pox (continued):—	duration	Abortion and other Cases:—	duration

I. 5, small pox	*	F. 7, confluent small pox	7 days	acute bronchitis	10 weeks
second attack after natural small pox.		vaccinated 5 times without effect.		parturition	4 weeks
ST. GEORGE, HANOVER SQUARE; Belgrave.		LAMBETH; Waterloo (first part).		F. 27, uterine irritation; hæmorrhage; tymp-	1 week
I. 25, injury to the spinal cord, involving the kidneys—small pox also appeared, but receded	*	M. 6, small pox, confluent and severe (not vaccinated)	2½ days	Delirium Tremens:—	
WESTMINSTER; St. John the Evangelist.		F. 5, small pox with fever (not vaccinated) ..	1 month	In King's College Hospital, M. 42 (inquest, post mort.), delirium tremens	*
I. 36, confluent small pox (not vaccinated) ..	16 days	This is the second child that has died of small pox; one is now ill. Their abode is a cellar not fit for human beings.—(Registrar's Note.)		M. 32, delirium tremens; convulsions	*
I. 4, variola (not vaccinated)	1 week	Waterloo (second part).		Erysipelas and Delirium Tremens:—	
I. 26, confluent small pox, with pneumonia (not vaccinated)	1 week	M. 3, variola	9 days	M. 32, erysipelas—delirium tremens	11 days
St. Margaret.		M. 15, small pox	4 days	Intemperance:—	
I. 6 weeks, small pox (not vaccinated)	*	Church (first part).		F. 39, premature decay of vital powers, brought on by anxiety and intemperance, 2 years ..	
I. 2, small pox (not vaccinated)	10 days	F. 2, small pox	14 days	F. 41 (inquest), natural from asphyxia, accelerated by excessive drinking of ardent spirits ..	*
I. 2, variola (not vaccinated)	10 days	Chicken Pox:—		M. about 47 (inquest), excessive drinking of gin on board a steam boat, called "The Commerce of Gand."	
under 1, small pox	9 days	ST. MARYLEBONE; St. John.		Privation; Want of Breast-milk; Inanition:—	
I. 1, laryngitis	12 hours	F. 3 months, varicella—diarrhœa	*	F. 2 months, atrophy from innutritious diet—no breast-milk from birth.	
I. 1, variola confluent (not vaccinated)	*	St. Mary.		F. 9 weeks (post mort., inq.), chronic inflammation of mesenteric glands, produced by want of mother's milk (found dead in bed) ..	*
ST. PANCRAS; Somers Town.		M. 20 days, varicella	6 days	F. 7 weeks, marasmus from weaning	*
I. 1, small pox (not vaccinated—no medical attendant)	*	Syphilis:—		M. 12 days, atrophy from imperfect nourishment	*
SMALL POX HOSPITAL; (in Camden Town, sub-district).		M. 13 weeks, syphilis	from birth	M. 6 weeks, debility—want of breastmilk	*
I. 29, small pox confluent (unprotected)	8 days	Malformation:—		F. 9 weeks, mesenteric disease from improper food—want of breast-milk	*
I. 23, small pox confluent (unprotected)	8 days	F. 22 hours, morbus cereleus.		M. 1 month, defective nutrition	*
I. 27, small pox confluent (unprotected)	5 days	M. 8, cyanosis—the foramen ovale being open from birth.			
I. 20, small pox confluent (unprotected)	30 days	F. 5 weeks (post mort.), congenital malformation of heart.			
ST. PANCRAS; Camden Town.		M. 1, symptoms of congenital malformation of heart—cyanosis—convulsions	*		
I. 2, small pox (not vaccinated)	9 days	F. 10 days, spina bifida.			
This case occurred in a family of four children. Three were attacked by small pox, not having been vaccinated. Of these, an infant, is recovering; another, years old, is dangerously ill; the third is dead, as recorded above. The residence is in Smith-street, Pan-cras-road, close to the Small Pox Hospital.—Registrar's Note.		F. 6, malformation of the heart with hypertrophy	1 month		
HACKNEY; Hackney.		Hernia:—			
I. 8 months, semi-confluent small pox	10 days	In St. George's Hospital, M. 34, strangulated hernia—operation	*		
effusion on the brain	6 hours	In St. Bartholomew's Hospital, F. 50 (p.m.), strangulation of intestine, a band encircling a portion.			
STRAND; St. Anne, Westminster.		In London Hospital, M. 56, hernia	*		
I. 6, ulceration of intestines	*	M. 13, internal strangulation of intestine ..	*		
small pox	4 days	M. 60, strangulated hernia	14 days		
first attack—not vaccinated.		M. 54, hernia	*		
CITY OF LONDON; North West.		strangulation of bowel	6 days		
I. 10 months, confluent small pox	14 days	peritonitis	*		
bronchitis	2 days	Diabetes:—			
BETHNAL GREEN; Hackney-road.		M. 52, diabetes	4 years		
I. 1, small pox	7 days	Stone:—			
WHITECHAPEL; Artillery.		No deaths registered in the week from this cause.			
I. 26, small pox (after vaccination)	4 days	Childbirth:—			
Aldgate.		The time elapsing from commencement of labour to death should invariably be returned.			
I. 1, scarlatina	*	In University College Hospital F. 23 (post mort.), puerperal insanity	2 months		
small pox	7 days	melancholia—hydatids of liver	*		
vaccinated when 4 months old, by Mr. Little, parish doctor.		bronchitis	4 days		
ST. GEORGE IN THE EAST; St. Paul.		pneumonia	2 days		
I. 1, small pox	9 days	F. 23, childbirth	7 days		
first attack—vaccination twice attempted when 8 months old without success.		peritonitis	5 days		
STEPNEY; Shadwell and Wapping.		F. 32, puerperal arthritis	3 days		
I. 3, small pox confluent	20 days	F. 41, puerperal peritonitis	4 days		
vaccinated without effect.		F. 20, puerperal fever	7 days		
POPLAR; Poplar.		F. 19, scarlatina after childbirth	6 days		
I. 1, variola (not vaccinated)	11 days	F. 38, anasarca	*		
ST. GEORGE, SOUTHWARK; Kent Road.		debility after accouchment	8 or 9 days		
I. 9 weeks, small pox (not vaccinated)	21 days	F. 20 (post mort.), puerperal convulsions with effusion of the brain—hæmorrhage after delivery	2 hours		
I. 4, small pox (twice vaccinated)	*	F. 25, puerperal convulsions	30 mins.		
		F. 40, childbirth	1 month		
		uterine hæmorrhage	*		
		phlebitis	1 week		

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 9; other hæmorrhage, 4; ossification of heart, 1; other disease of heart, 3; aneurism, 2; intemperance, 2; want of breast-milk, 1; violence, 80; other specified causes, 30; "found dead," "visitation of God," &c., 32—TOTAL, 164 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 73.

Cases of CHOLERA returned in the Week ending July 8th:—In Charing Cross, F. 63 years, "cholera," (duration 3 days.) In All Souls (St. Marylebone), F. 5 mon., "cholera infantum, (3 days); laryngitis, (2 days)." In Pentonville, F. 2 years, "English cholera" (4 days.) In St. James', Clerkenwell, F. 11 months, "cholera," (4 days.) In St. Leonard's, Shoreditch, F. 4 months, "English cholera morbus," (2 days.) In Ratcliff, M. 5 years, "cholera morbus," (26 hours.) In Greenwich, East, F. 68 years, "Asiatic cholera."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 8th July, 1848.

Day.	Phase of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive with tension variable at 11h. a.m. noon, and 6h. p.m. Nothing was shewn at other times.	The sky was partially covered throughout the day with cumulostrati, cirrostrati, and scud. During the morning there were a few very light showers of rain.
MON.	Positive with tension moderate at 9h. a.m. and 6h. p.m. Nothing was shewn at other times.	The sky was overcast, with rain falling occasionally throughout the day. There were heavy showers of rain about 4h. and 11h. p.m.
TUES.	Nothing was shewn till noon, when it became positive with variable tension continuing until midnight.	The amount of cloud was variable till about noon; the sky then became overcast and continued so until midnight. Cirrostrati, fleecy clouds, and scud. A light rain fell shortly before sunrise.
WED.	The same as on the preceding day.	The sky was about one-third covered with cumulostrati, cirrostrati, fleecy clouds, and scud till near 11h. p.m. At midnight it was cloudless.
THURS.	Positive with tension moderate till noon, at which time nothing was shewn; it was afterwards positive with variable tension until midnight.	The sky was cloudless throughout the day with the exception of noon and 3h. p.m., at which times a few detached cumuli were observed.
FRID.	Positive with tension moderate at 9h. a.m. 3h. and 6h. p.m. Nothing was shewn at other times.	The sky was cloudless till sunrise when heavy clouds began gradually to cover the sky, a shower of rain fell at 11h. a.m. The amount of cloud varied considerably during the latter part of the day.
SAT.	Positive with tension weak at 6h. and 9h. a.m. And negative with tension moderate at 3h. and 6h. p.m. Nothing was shewn at other times.	The sky was nearly cloudless till about 6h. a.m., after which time until midnight it was principally covered with cirrostratus and scud. Several showers of rain fell after 3h. p.m.

The height of the cistern of the barometer is considered to be 15 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that to which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 59.6; and the mean reading at 6h. p.m. was 66.4; the mean readings at the Royal Observatory for the same times were 59.4 and 67.1 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JULY 8, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, July 2, early in the morning, the temperature of the air was 43.5; and at about the same time the reading of a thermometer placed on grass was 33; at 7h. a.m. the temperature of the air was 52; this value increased very slowly till 4h. 25m. p.m., at which time it was 66; it then turned to decrease, and was 52.5 at midnight. On Monday, early in the morning, the temperature was 52.8; at 0h. 30m. p.m. it was 68; and it was 58.2 at midnight. On Tuesday the lowest temperature, early in the morning, was 54.5; the highest value occurred at 3h. p.m., and was 67; after 3h. 20m. p.m. it decreased, and was 56 at midnight. On Wednesday, early in the morning, the temperature was 53; this value increased quickly during the morning; and between 1h. and 2h. p.m. the maximum for the day, viz. 79.2 took place; at midnight the value was 58.7. On Thursday the lowest temperature, early in the morning, was 54.5; by 7h. a.m. it had increased to 65.5; at 8h. a.m. it was 70.5; at 10h. 30m. it was 81; at noon it was 82.5; from 1h. to 3h. p.m. it was 85; and after this time it decreased, at first very gradually; at midnight the value was 66; and it did not descend below 63 during the night. On Friday, at 7h. a.m., the temperature was 69; at 8h. a.m. it was 73; at a little after 9h. a.m. it was 75; and after this time the value varied between 70 and 73 till after 3h. p.m.; at midnight the temperature was 58. On Saturday the temperature, early in the morning, was 53.5; at 11h. 30m. a.m. it was 70; it then turned to decrease; at 3h. p.m. it was 61.5; and it was 53.1 at midnight.

The average temperature of the air for each day was as follows:—Sunday, 54.5; Monday, 58.2; Tuesday, 58.5; Wednesday, 64.2; Thursday, 73.0; Friday, 64.5; and Saturday, 61.0. The average temperature of these days, deduced from the period 1841, January 1, to 1847, December 31, are 61.3; 61.6; 61.8; 61.9; 61.8; 61.4, and 61.4, respectively; so that the mean temperature of the air during the first three days, and on the last days, were below the average, and they were above the average on the 5th, 6th, and 7th; amounting on the 2nd day to 6.8 below, and on the 6th day to 11.2 above, exhibiting a difference of 18° within a period of four days. On July 5, on the average of the above period, the maximum temperature for the year takes place.

The difference of temperature during each day was as follows:—

Sunday, 22.5; Monday, 15.5; Tuesday, 12.5; Wednesday, 26.5; Thursday, 30.5; Friday, 17.4; and Saturday, 16.5.

The average temperature of the Dew Point for each day was as follows:—

Sunday, 47; Monday, 55; Tuesday, 47.5; Wednesday, 54; Thursday, 58; Friday, 55; and Saturday, 54.

On Thursday, between the hours of 11h. a.m. and 6h. p.m., the temperature of the air exceeded that of the Dew Point by quantities varying from 20° to 21°.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 3.8gr.; Monday, 4.9gr.; Tuesday, 3.8gr.; Wednesday, 4.8gr.; Thursday, 5.3gr.; Friday, 5.0gr.; and Saturday, 4.8gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending July 8.	In the Years,							Excess or Deficiency in the week ending July 8, above or below that in the years *						Deficiency in the year 1848
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	59.2	63.3	58.8	63.9	63.6	63.2	61.7	+ 2.5	- 1.6	+ 2.9	- 2.2	- 1.9	- 1.5	0.5
Temperature of the Dew Point	51.7	57.9	54.7	56.7	55.4	55.6	52.9	+ 1.2	- 5.0	- 1.8	- 3.8	- 2.5	- 2.7	2.4
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air.....	4.4	5.5	4.9	5.3	4.9	4.9	4.6	+ 0.2	- 0.9	- 0.3	- 0.7	- 0.3	- 0.3	0.4

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, July 8, was 2.5 above the temperature of the corresponding week of 1842.

Errata.—In the report for the week ending the 1st July, in column 15, ranging with Sunday, June, 25, for 0.00 read 0.0; and for the mean of values in column 15, for 3.1 read 2.7.

Births and Deaths registered in London,
During the Week ending Saturday, July 15th, 1848.

This table contains the deaths in WANDSWORTH
&c., LEWISHAM, and Hampstead, throughout.
Averages are added for the years in which they
were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 27.

(The tabular abstract on the first page is for the week ending Saturday, July 15th. The following selection of cases is made from the Returns for the week ending July 8th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Hanging and Suffocation:—	duration
F. 85 (no inquest), fell down stairs, by which the cervical portion of the spine was injured	4 days	Working jeweller, 49, natural congestion of the brain, during which, being insane, he cut his throat with a razor	*	In Middlesex House of Detention, M., formerly a livery-stable-keeper, 55, suicide by hanging, being of unsound mind.	
Daughter of a cabinet-maker, 4, accidental fall down stairs on the head, producing concussion of the brain	7 days	Drowning:—		Burns and Scalds:—	
In Westminster Hospital, surgeon, 68 (post mort.), fracture of the skull by a fall when stepping out of an omnibus, in Waterlo-road, the horses having run away (the driver being in a fit)	about 11 hours	No deaths enumerated under this head in abstract.		Son of a smith, 7 months (no inq.), scald . . .	18 days
				crispelas	14 days
				Poison:—	
				No deaths referred to this head in abstract.	

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HEMORRHAGE, HEMATEMESIS, ETC.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn at each examination.	The sky was overcast with cirrostratus and scud till about 6h. p.m., heavy rain falling nearly the whole time. At 11h. p.m. it became clear for a short period, but at midnight the sky was again cloudy.
MON.	Positive with tension strong at noon and 6h. p.m. Moderate at other times, but becoming weaker at midnight.	The sky was about two-thirds covered during the day with cirrostrati, fleecy clouds and scud, except at 9h. a.m. when for a short period it was cloudless.
TUES.	Nothing was shewn throughout the day except at noon when it was positive with strong tension.	The sky was nearly overcast with thin clouds during the early part of the day, which towards evening gradually cleared off and at midnight the sky was cloudless.
WED.	Nothing was shewn throughout the day except at 6h. p.m. when it was positive with weak tension.	The sky was cloudless throughout the day except at 6h. p.m. when a few light clouds with haze prevailed.
THURS.	The same as on the preceding day.	The sky was cloudless till about 9h. 30m. p.m. when it became overcast with cirrostratus and haze which increased in density until midnight.
FRID.	Nothing was shewn till about 6h. p.m. when it became alternately positive and negative with very strong tension continuing until midnight. Sparks were very frequent.	A thick fog came up shortly before 1b. a.m. and continued until nearly four hours after sunrise. About noon the sky became nearly clear, but towards 6h. p.m. nimbi and scud began to form and prevailed until midnight accompanied with constant flashes of lightning followed by thunder at intervals varying from 5sec. to 40sec. Large drops of rain fell occasionally during the evening.
SAT.	Nothing was shewn till about noon when it became positive with moderate tension. After 3h. p.m. the tension greatly increased and continued strong till midnight.	The sky was nearly overcast till about 6h. p.m. when the clouds began to disperse and at midnight it was cloudless. Frequent flashes of lightning were seen before 4h. a.m. followed occasionally by very distant thunder.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be correct with those of the Royal Society's first standard barometer. The amount of error is estimated by considering a clear sky represented by 0, a cloudy sky by 1, when partially cloudy by estimating a number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the rays of the sun, and the other placed in grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here open to the civil day which precedes the day in which the thermometers are read.

The average temperature of the air that determined by Mr. Glaisher's two-hourly observations taken at the Observatory, Greenwich, in the week ending 1847, December 21.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it is borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of registering thermometers, suspended from the side of the Dreadnought Hospital ship at the depth of about 2 feet below the surface. The readings of this instrument registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading a thermometer placed on the mainmast, read each day at 6h. a.m. was 58°; the mean reading at 6h. p.m. was 70°; the mean readings at the Royal Observatory the same times were 56.1 and 69.3 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JULY 15, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, July 9, very early in the morning the temperature of the air was 54°; before 6h. a.m., it was 57°, and it continued at about this value with very slight change throughout the remainder of the day. On Monday, the temperature early in the morning was 53°; at 2h. 15m. p.m. it was 71°, and it was 52° at midnight. On Tuesday early in the morning the temperature was 47°; at 5h. a.m. it was 52°; at 8h. a.m. it was 58°; at 3h. 40m. p.m. it was 72°; after this time it decreased, and it was 51° at midnight. On Wednesday, the lowest temperature early in the morning was 50°; at 9h. a.m. the temperature was 64°; at 10h. a.m. it was 63°; it shortly afterwards turned to increase, and was 74° at noon, 75° at 1h. p.m., and 76° at 3h. p.m.; after this time it turned to decrease, and was 54° at midnight. On Thursday, early in the morning the temperature was 48°; at 7h. a.m. it was 58°; this value steadily increased till 2h. 10m. p.m., when it was 81°; it then turned to decrease, and at 3h. p.m. it was 78°; at 7h. p.m. it was 75°, and it was 59.5 at midnight. On Friday, early in the morning the temperature was 57°, this value slowly increased till 8h. 30m. a.m., when it was 60°; it then began to increase quickly; at 9h. a.m. it was 68°; at 10h. a.m. it was 75°; at 11h. 30m. a.m. it was 77°; at 2h. p.m. it was 83°; after which it turned to decrease; at 3h. p.m. it was 82°; at 6h. p.m. it was 76°; and it was 63.5 at midnight. From 6h. p.m. till after midnight lightning was frequent and thunder was occasionally loud; the storm was situated chiefly to the north. On Saturday, the lowest temperature in the morning was 60°; before 2h. p.m. it had been 74°; it was 50° at midnight, and decreased to 43° after midnight. At midnight on Saturday, a thermometer placed on the grass, and not fully exposed to the sky, read 33°, and during the morning of Sunday, July 16, the same thermometer in the same situation read 29°. Had the temperature of vegetation been taken in the open country, it would have been found to have been several degrees below the freezing point of water at this time. At the time these low readings took place on grass, the temperature on the ground under the grass was from 60° to 62°.

The average temperature of the air for each day was as follows:— Sunday, 56°; Monday, 61°; Tuesday, 60°; Wednesday, 63°; Thursday, 63°; Friday, 68°; and Saturday, 61°.

The difference of temperature during each day was as follows:— Sunday, 7°; Monday, 17°; Tuesday, 25°; Wednesday, 26°; Thursday, 33°; Friday, 26°; and Saturday, 24°.

The difference of temperature of the air during the week was 36°.

The average temperature of the Dew Point was as follows:— Sunday, 54°; Monday, 52°; Tuesday, 53°; Wednesday, 55°; Thursday, 58°; Friday, 60°; and Saturday, 55°.

The average weight of water mixed with a cubic foot of air was as follows:— Sunday, 4.9gr.; Monday, 4.5gr.; Tuesday, 4.6gr.; Wednesday, 4.9gr.; Thursday, 5.4gr.; Friday, 5.8gr.; and Saturday, 5.0gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending July 15.	In the Years,							Excess or Deficiency in the week ending July 15, above or below that in the years *						Deficit in the year 1
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	62.6	61.2	61.6	57.5	63.9	70.0	62.2	-0.4	+1.0	+0.6	+4.5	-1.7	-7.8	0.0
Temperature of the Dew Point	53.7	57.2	53.7	52.0	57.1	60.6	55.4	+1.7	-1.8	+1.7	+3.4	-1.7	-5.2	0.0
Mean Amount of Water in a Cubic Foot of Air	4.8	5.3	4.7	4.5	5.3	5.9	5.0	+0.2	-0.3	+0.3	+0.5	+0.3	-0.6	0.0

* In reading this Table, it will be borne in mind that the minus sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1848, July 15, was 0.4 below the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, July 22nd, 1848.

This table contains the deaths in WANDSWORTH &c., LEWISHAM, and Hampstead, throughout. Averages are added for the years in which they were not returned weekly.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 28.

(The tabular abstract on the first page is for the week ending Saturday, July 22nd. The following selection of cases is made from the Returns for the week ending July 15th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Drowning (continued):—	duration
No deaths enumerated under this head in abstract.		Son of a labourer at a gas factory, 10, drowned by falling into a creek of the Thames, at Stanley Bridge, Fulham, when at play on a barge plank—found dead.	*	M. newly born (no inquest), drowned in a chamber of fluid during a labour pain—no medical assistance at hand for an hour.	
Wounds:—		Single woman, 28, suicide in temporary insanity, by drowning in the ornamental water St. James' park (under water about 8 minutes.)		M. 13, drowned by accidentally falling into the Commercial dock, when sailing a boat (in water 20 minutes.)	
M. 67, shot himself with a pistol, in temporary insanity	*	M. 15, accidentally drowned when bathing.		M. 27, accidentally drowned in the Thames when bathing.	
M. 66, cut his throat in temporary insanity	*				

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Hanging and Suffocation:—	duration	Burns and Scalds:—	duration	Poison:—	duration
39, hanged himself in temporary insanity gentleman's servant, 50, suffocated by falling on his face, resulting from a natural affection of the body—congestion of the brain (dead 2 days).	*	Daughter of a blind-maker, 7, burns of the fingers, arms, and neck, producing in a week traumatic tetanus; caused by her clothes taking fire at a kitchen grate (without a fire-guard).	*	Wife of a coach-smith, 27, suicide with 2 oz. of laudanum (when insane).....	2 hours
DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.					
Small Pox	duration	Small Pox (continued):—	duration	Childbirth (continued):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		WHITECHAPEL; Spitalfields.		F. 30, uterine hæmorrhage following delivery of twins	*
ENSINGTON; Fulham.		F. 11 months, small pox (not vaccinated)	7 weeks	F. 21, childbirth.....	6 days
1, variola	3 weeks	inflammation of lungs	*	inflammation of the lungs	*
bronchitis	4 days	BERMONDSEY; The Leather Market.		F. 44, repeated hæmorrhage previous to confinement	8 weeks
HELSEA; South.		F. 17 days, variola.....	*	F. 21, puerperal convulsions	4 days
10, small pox (not vaccinated)	12 days	St. GEORGE, SOUTHWARK; Kent-road.		Delirium Tremens:—	
2, variola (not vaccinated).....	1 week	F. 1, small pox (vaccinated unsuccessfully) ..	*	M. 35 (post mort.), delirium tremens.....	4 days
disposition to takes mescuticæ.		F. 4, small pox (vaccinated unsuccessfully) ..	*	coma	36 hours
—North-West.		—London-road.		M. 33, delirium tremens	24 days
3, small pox (not vaccinated).....	12 days	F. 3, variola confluent (not vaccinated)	12 days	In St. Bartholomew's Hospital, M. 33, delirium tremens	*
3, small pox (not vaccinated).....	21 days	St. MARY, NEWINGTON; Trinity.		M. 49, delirium tremens	3 days
—North-East.		M. 2, small pox (unprotected)	7 days	M. 44, delirium tremens	about 3 weeks
2, confluent small pox (not vaccinated) ..	1 week	LAMBETH; Waterloo (first part).		Cancer and Delirium Tremens:—	
WESTMINSTER; St. John the Evangelist.		M. 4, small pox	9 days	F. 64, cancer of the breast	some years
4, small pox—pneumonia (not vaccinated) 12 days		vaccinated 3½ years ago without effect.		delirium tremens.....	18 days
7, variola (not vaccinated)	3 weeks	F. 6 mon., variola	*	Intemperance:—	
—St. Margaret.		GREENWICH; St. Paul's, Deptford.		M. 29 (inquest), epilepsy—died suddenly during a fit after intoxication	*
2, variola (not vaccinated)	14 days	F. 7 mon., small pox (first attack—not vaccinated).....	9 days	F. 36, diseased liver and diarrhœa	3 weeks
under 1, small pox (not vaccinated)	1 week	—Woolwich Arsenal.		from drinking and disorderly living.	
23, confluent small pox (not vaccinated) ..	2 weeks	M. 4, small pox (first attack—not vaccinated), 1 week		Privation; Want of Breast-milk; Inanition:—	
8, small pox—pneumonia	3 weeks	Syphilis:—		M. 5 mon., atrophy from want of breast-milk ..	*
not known whether vaccinated.		F. 4 mon., syphilis—marasmus	*	Bronchitis and Want of Breast-milk:—	
26, small pox	*	M. 4 mon., secondary syphilis	from birth	M. 6 months, bronchitis	1 week
MALL POX HOSPITAL; (in Camden Town, sub-district).		diarrhœa	14 days	enigitis.....	3 days
5, small pox, confluent (unprotected)	15 days	F. 3 weeks, congenital syphilis	*	brought up by hand.	
20, small pox, confluent (unprotected)	14 days	Malformation:—		Purpura and Scurvy:—	
30, small pox confluent (unprotected)	12 days	M. 12 days, anus imperforatus.		F. 12, scorbutus.....	*
21, small pox confluent	*	M. 4 months, cleft palate and marasmus ...	from birth	anasarca	7 weeks
vaccinated when young at Old Lambeth Church—one indistinct cicatrix.		F. 11 days, congenital obstruction of bowels.		aphtha	4 days
LERKENWELL; Goswell-street.		Hernia:—		Hæmorrhage, Hæmatemesis, &c.:—	
6 mon., small pox	1 week	F. 15, internal strangulation of the small intestines	5 days	F. 59, hæmatemesis	8 hours
vaccination twice attempted when 6 weeks old without effect.		In Guy's Hospital, M. about 65, hernia.....	*	F. 49, hæmorrhagia	9 months
T. LUKE; Finsbury.		Diabetes:—		diarrhœa	2 months
7 months, variola.....	*	M. 59, diabetes	2 months	F. 56, rupture of a blood-vessel in the chest..	7 weeks
pertussis	14 days	Stone:—		exhaustion from diarrhœa	10 hours
pneumonia and bronchitis	*	No deaths enumerated under this head in abstract.		F. 66, vomiting blood	*
—Whitcross Street.		Childbirth:—		In Loudon Hospital, M. 41, epistaxis.....	*
5, small pox (vaccinated when a month old) ..	*	The time elapsing from commencement of labour to death should invariably be returned.		F. 73 (inquest), natural, from the rupture of a vessel internally	*
—City-road.		F. 21, puerperal fever	14 days	F. 32, uterine hæmorrhage—diarrhœa	20 days
1, small pox (not vaccinated)	15 days	F. 24, peritonitis	5 days	Miscellaneous Cases:—	
EAST LONDON; St. Botolph.		premature confinement	2 days	M. 4 months, vaccination.....	24 days
27, small pox (not known whether vaccin.), 5 days		F. 30, childbirth.....	17 days	erysipelas	8 days
ROBEDITCH; Haggerstone, West.		typhus	7 days	M. 10 mon., simple fever after vaccination... 10 days	
5 (inquest), natural death.		F. 43, parturition	10 days	F. 33 (post mort.), ovarian dropsy	*
confluent small pox	13 days	diarrhœa	7 days	hydatis, about 2 or 3 months.	
not vaccinated—This case was attended at first by a non-qualified practitioner, and afterwards neglected by him.		ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 1; rupture of an internal vessel, 1; small pox, 1; intemperance, 1; violence, 11; other specified causes, 4; "found dead," "natural death," "visitation of God," &c., 6.—TOTAL, 25 cases.		peritonitis and inflammation of the cyst ..	7 days
2, small pox (not vaccinated)	5 days	The NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 37.		tapped 10 times—total quarts 215.	

Cases of CHOLERA returned in the Week ending July 22nd.

In the North-East sub-district of Chelsea, a woman aged 77 years, "cholera epidemica, (duration of illness 60 hours.)"
 In St. Margaret's, Westminster, a woman aged 49 years, "pain in the head—attack of cholera, (duration 4 days.)"
 In St. Margaret's, Westminster, a girl under 1 year, "infantile cholera, (4 hours' duration.)"
 In St. Mary, Marylebone, a boy aged 6 months, "cholera morbus."
 In St. Mary, Marylebone, a girl aged 11 months, "dentition, cholera, effusion on the brain, (3 days duration.)"
 In Gray's Inn-lane (sub-district), a boy aged 1 year, "English cholera, (duration 1 day.)"
 In Islington (East sub-district), a boy aged 6 months, "infantile cholera, exhaustion, (duration 1 month.)"
 In St. Giles in the Fields (South sub-district), a man aged 53 years, "cholera (duration 38 hours.)"
 In St. Mary, Strand, a man aged 55 years, "bilious cholera."
 In South sub-district of West London, a girl aged 3 months, "cholera, (duration 4 days.)"
 In North sub-district of West London, a boy 3½ years "cholera (duration 12 hours.)"
 In St. Luke, City-road, a woman aged 78 years, "English cholera, (2 days duration.)"
 In Cripplegate, a boy aged 4 months, "cholera infantum, (duration 3 days.)"
 In the Green, sub-district of Bethnal-green, a man aged 33 years, "cholera, (duration 2 days.)"
 At No. 3, Derbyshire-street, Town sub-district of Bethnal-green, a single woman aged 62 years, "cholera, typhus, (duration 2 weeks.)"
 At No. 7, Mount-street, Bethnal-green, wife of a box-maker, aged 39 years, "Asiatic cholera, (duration 16 hours.)"
 In St. Paul's, St. George in the East, a woman aged 62 years, "cholera, (22 hours.)"
 In Trinity, St. Mary, Newington, a boy aged 6 months, "cholera infantum, (3 days.)"
 At No. 15, Wickham-street, Lambeth, a girl aged 1 year, "cholera, (duration 5 days.)"
 At No. 22, Neville-street, Vauxhall, a boy aged 11 months, "cholera, (1 week.)"
 In Peckham, a woman aged 62 years, "English cholera, (duration 30 hours.)"

Cases of Cholera returned in the Metropolis in 6 Weeks of the last 5 Years.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn till noon, when it became positive with strong tension, it gradually decreased until midnight, when nothing was shewn.	The sky was occasionally overcast with thin cirrostrati and haze until near midnight, when it became cloudless.
MON.	The same as on the preceding day.	The sky was cloudless till about 9h. a.m., when thin cirrostrati began to prevail, and continued with variable amount until midnight.
TUES.	Positive, with tension weak until noon, when it became strong and continued so until near midnight, when the tension became again weak.	The sky was nearly cloudless throughout the day except at about noon and midnight, when a few light clouds prevailed.
WED.	Positive, with tension moderate at 9h. a.m., and 6h. p.m. Nothing was shewn at other times.	The sky was overcast throughout the day, and towards midnight a light rain fell.
THURS.	Positive, with slight tension at 6h. a.m.; after which time nothing was shewn until near midnight, when it became positive, with tension strong.	The sky was overcast till about 3h. p.m., when it became partially clear, but towards midnight it again became overcast. Heavy squalls of wind and rain occurred at noon and at 3h. p.m. A fine rain also fell at intervals during the day.
FRID.	Positive, and tension strong till about 9h. a.m.; after which time nothing was shewn until midnight, when it became positive with moderate tension.	Cirrostrati, cumuli, fleecy clouds and scud prevailed during the day. Their amount gradually increased till about 6h. p.m., when the sky became overcast and continued so until midnight. Rain fell from about 5h. 30m. p.m., until near midnight.
SAT.	Positive, and tension strong throughout the day except at 9h. a.m., when nothing was shewn.	The sky was overcast till about 2h. 30m. a.m., when the clouds suddenly dispersed and the sky became cloudless, remaining nearly so till about noon, when it again became overcast. The amount of cloud however gradually decreased towards midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1848.

The readings of the two self-registering thermometers, the one placed in the fall rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air in that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the malinest, and read each day at 6h. a.m. was 61.0; and the mean reading at 6h. p.m. was 65.1; the mean readings at the Royal Observatory for the same times were 57.1 and 65.3 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JULY 22, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, July 16, the lowest temperature of the air early in the morning was 43°.5; this value increased to 73°.5 by 2h. p.m.; it then slightly decreased; and at 4h. p.m. had increased to 74°.2; after this time it decreased, and it was 56° at midnight. On Monday, the temperature early in the morning, was 52°.5; at 1h. p.m. it was 76°.5; at 3h. p.m. it was 73°.4; and it was 60° at midnight. On Tuesday, early in the morning, the temperature was 50°.5; at noon it was 72°; at 2h. p.m. it was 78°; at 3h. p.m. it was 75°; and at midnight was 59°. On Wednesday, early in the morning, the temperature was 53°.9; this value increased to 61°.5 at 7h. a.m., to 71°.5 between noon and 2h. p.m., and decreased to 61° by midnight. On Thursday, the lowest temperature during the early morning, was 61°, at which value it continued till 5h. a.m.; at 8h. a.m. it was 65°; at 2h. p.m. it was 71°.5; at 3h. p.m. it was 70°.2; at 5h. p.m. there was a violent squall of wind and rain, and the temperature suddenly decreased 5°, the thermometer reading being 58°; and after the squall, the reading increased to 61°.5; at midnight the reading was 52°. On Friday, the lowest temperature was 54°; this value increased to 68°.5 at noon; after which time it decreased very slowly till midnight, when the temperature was 60°. On Saturday, the lowest temperature occurred early in the morning, and was 53°.5; at 7h. a.m. it was 60°; the increase during the morning was gradual; and at 1h. p.m. it was 71°; and it was 56° at midnight.

The average temperature of the air for each day was as follows:—

Sunday, 58°.3; Monday, 63°.5; Tuesday, 63°; Wednesday, 61°.2; Thursday, 60°.8; Friday, 58°.0; and Saturday, 61°.6.

The difference of temperature during each day was as follows:—

Sunday, 31°.7; Monday, 24°.0; Tuesday, 27°.5; Wednesday, 16°.6; Thursday, 19°.5; Friday, 19°.2; and Saturday, 16°.3.

The difference of temperature of the air during the week was 35°.5.

The average temperature of the Dew Point was as follows:—

Sunday, 53°.0; Monday, 53°.5; Tuesday, 53°.0; Wednesday, 53°.5; Thursday, 54°.0; Friday, 50°.5; and Saturday, 52°.5.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 4.6gr.; Monday, 4.6gr.; Tuesday, 4.6gr.; Wednesday, 4.6gr.; Thursday, 4.8gr.; Friday, 4.3gr.; and Saturday, 4.5gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending July 22.	In the Years,							Excess or Deficiency in the week ending July 22, above or below that in the years *						Deficient in the year 1841
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	60.0	60.6	58.9	61.5	62.7	64.5	60.9	+ 0.9	+ 0.3	+ 2.0	- 0.6	- 1.8	- 3.6	0.5
Temperature of the Dew Point	53.9	55.8	52.2	55.9	54.5	57.0	52.9	- 1.0	- 2.9	+ 0.7	- 3.0	- 1.6	- 4.1	2.0
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	4.8	5.1	4.6	5.1	4.8	5.3	4.6	- 0.2	- 0.5	0.0	- 0.5	- 0.2	- 0.7	0.3

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, July 22, was 0.9 above the temperature of the corresponding week of 1842.

ERRATA.—In the Observations taken at GREENWICH in week ending July 15th, MEAN TEMPERATURE of the air for the week, for 74°.6, read 64°.6.
In the report for last week, July 15, omit "Full Moon."

Births and Deaths registered in London,
During the Week ending Saturday, July 29th, 1848.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 20

(The tabular abstract on the first page is for the week ending Saturday, July 29th. The following selection of cases is made from the Returns for the week ending July 22nd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italic at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued)	duration	Fractures and Contusions (continued):—	duration
F. 4 (no inquest), disease of hip-joint from a fall 2 years ago—no medical attendant lately.		In St. Bartholomew's Hospital, draper, 45, delirium tremens, accelerated by compound fracture of his right leg, from a fall in Butcher Hall-lane	8 days	In St. Bartholomew's Hospital, son of a shoemaker, 10 (post mort.), fracture of skull and rupture and effusion on the brain, by falling from a van in Milton-street, Cripple-gate, whilst at play	10 hours
In Charing Cross Hospital, single woman, 23, fracture of her skull. Threw herself from a second floor window when insane	a few minutes	M. 9, head crushed accidentally between the wheel of a cart and a gate post at Stangate, Lambeth	instant	In St. Bartholomew's Hospital, labourer, 34, shock produced by the crushing of both legs from a railway wagon passing over them at Hornsey, whilst making the London and York line	3 hours
Spinster (in no business) 45, threw herself out of a window in temporary insanity	4 hours	F. 61, run over by a waggon in Leadenhall-street, causing fracture of ribs and other injuries	a few minutes		
M. 33, injury to his brain by falling down stairs	56 hours				

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Wounds:—	duration	Drowning, &c. (continued):—	duration	Hanging and Suffocation:—	duration
No deaths enumerated under this head in abstract.		M. 9, drowned by his foot slipping whilst running down the steps, and falling into the water (in water 10 minutes).		F. 60, suffocation by hanging—suicide.	
Drowning and Immersion:—		M. 11, drowned accidentally, going into the water after a toy barge (in water 3 hours).		Burns and Scalds:—	
In Cbaring Cross Hospital, M. formerly a quarry agent, about 46 (post mort.), collapse after immersion in the River Thames. No evidence how he came into the water—supposed to have thrown himself off Waterloo-bridge (under water a few minutes); lived.. 2 days		M. 5, drowned by falling into the River Thames at Staungate accidentally (in water about 2 hours).		In St Bartholomew's Hospital, wife of a tin-plate worker, 33, burnt by her night gown taking fire, whilst endeavouring to extinguish a curtain that was on fire in Robin-hood-court, Shoc-lane..... 5 hours	
M. 8, accidentally drowned.		M. about 40, drowned—no marks of violence—no sufficient proof how he came into the water (in water about 1½ hour).		Poison:—	
Three men, aged respectively 18, 26, and 61, accidentally drowned whilst bathing.		Son of a labourer, 7, submersion by falling into the River Thames (10 minutes).		No deaths placed to this head in abstract.	
M. 13, drowned by falling out of a skiff (under water 10 minutes).		NOTE.—A case of drowning appeared in the abstract for week ending July 22nd, which had, by mistake, been registered in two districts. The persons returned as "drowned" should have been stated as amounting to 12.			
M. 6 drowned, but no evidence how he got into the water (under water 15 hours).					

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

dysenteric diarrhoea 3 days		Childbirth:—		Phthisis and Hæmatemesis:—	
convulsions (first fit) 1 hour		The time elapsing from commencement of labour to death should invariably be returned.		M. 42, phthisis 1 year	
HOLBORN; St. Andrew, East.		F. 28, puerperal fever 8 days		hæmatemesis *	
F. 7, small pox 2 weeks		F. 28, childbirth 12 days		Miscellaneous Cases:—	
twice vaccinated, but without effect.		puerperal fever..... *		F. 40 (post mort.), malignant disease of right ovary..... *	
ST. LUKE; Whitecross Street.		F. 29, puerperal peritonitis 7 days		ovarian dropsy..... 2½ years	
M. 1, confluent small pox (not vaccinated) .. 7 days		F. 26, puerperal peritonitis 8 days		tapped 60 times.	
—City-road.		F. 21, puerperal fever (after childbirth) .. 7 days		total fluid removed. 1375 pints.	
M. 5, small pox 11 days		F. 27, puerperal fever..... 8 days		F. 2, maculated typhus (caught from a fatal case of puerperal fever) 40 hours	
old.		F. 39, abortion—exhaustion—vomiting..... 1 week		In Royal Free Hospital, M. 65, diffuse cellular inflammation (following amputation of the toe for diseased bone)..... 48 hours	
CITY OF LONDON; South.		F. 20, childbirth..... 2 hours		F. 50 (inquest), natural—sudden, from disease and want of attention and relief..... *	
M. 2, small pox—diarrhoea (not vaccinated) .. *		F. 38, hæmorrhage after parturition 4 months		F. 8, scarlatina—anasarca—tetanus .. *	
SHOREDITCH; St. Leonard's.				Mr. Wheatley, Registrar of Lambeth Church sub-district (2nd part) states, that scarlatina is very prevalent there.	
M. 3, small pox (not vaccinated)..... 3 weeks					
typhus 20 days					
F. 6, small pox (not vaccinated) 3 weeks					
WHITECHAPEL; Goodman's Fields.					
M. 4, small pox (not vaccinated)..... 15 days					
M. 5, small pox (not vaccinated)..... 20 days					

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 4; disease of heart, 6; intemperance, 1; delirium tremens, 1; neglect, 1; violence, 23; other specified causes, 11; "found dead," "natural death," "visitation of God," &c., 6.—TOTAL, 53 cases.

THE NUMBER OF CASES IN WHICH IT IS REPORTED THAT A POST MORTEM EXAMINATION WAS MADE, IS 52.

Cases of CHOLERA returned in the Week ending July 29th.

In Belgrave (sub-district) F. 54, "Asiatic cholera, (58 hours duration)." NOTE.—MR. JORDEN, the Registrar, states that "this was a distinct case of Asiatic cholera, occurring in his own practice, of which he had seen much both at home and in the East. The patient was said to have suffered from a severe attack, when it prevailed before some 16 years ago. She was of delicate health and suffered from psoriasis inveterata. She was attacked suddenly in bed at 4 o'clock in the morning, having the day before dined on half-boiled cabbage and some sort of dumplings."

In St. John the Evangelist, Westminster, a boy aged 4 months "cholera infantum (4 days' duration)." In same sub-district, a boy 3 months "cholera infantum (4 days)." In Gray's Inn-lane (sub-district) a boy aged 11 months "diarrhoea—cholera (4 days)." In Somers Town, a boy aged 4 months "cholera (2 days' duration), typhus (1 day)." In Camden Town, M. 62 years "dysentery (11 days) cholera (3 days)." In West sub-district of Islington, a boy 7 weeks, "cholera (5 days)." In East sub-district of Islington, a woman aged 29 years, "cholera (4 days) collapse on the 4th day." She was the wife of a shoemaker and lived in one of the dirty confined courts out of the High street. In St. Anne, Westminster, a boy aged 16 months, "cholera infantum, (7 or 8 days)." In Saffron Hill, a boy aged 22 days, "cholera infantum, (6 days) convulsions (4 days)." In sub-district of Goswell-street, M. 77, "diarrhoea, (6 days) which assumed symptoms of cholera, exhaustion, (3 days)." In North sub-district of West London, a boy aged 6 months, "cholera, (24 hours)." In Haggerstone West, a carpenter 76 years, "natural death, sudden from English cholera," (inquest) In Bethnal Green (Town) at No. 12, Carlisle-street, son of a brewer's servant aged 7 weeks, "cholera, (2 days)." In St. Mary, St. George in the East, M. 59 years, "English cholera, (6 days)." In Limehouse, F. 40 years, "cholera, (3 days) collapse, (25 hours)." In Ratcliffe, M. 51 years, "cholera maligna, (30 hours)." In Lambeth Church sub-district (2nd part) at 137, Regent-street, F. 16 years "English cholera (2 days) exhaustion." In Camberwell, at 4, South-street, daughter of a letter carrier, aged 2 years, "English cholera, (6 days)." In Holywell and Moorfields, Shoreditch, a boy aged 19 months, "English cholera, (4 days)." In same sub-district, M. 24 years, "spasmodic cholera, (4 days)." In East sub-district, of Greenwich, M. 61 years, "cholera." In same sub-district, M. 71 years, "cholera, (4 days)." In same sub-district, M. 60 years, "asthma, (20 years) cholera, (4 days)." In same sub-district, a girl 1 year, "cholera." In Battersea, a boy 1 year, "cholera, (4 days)." NOTE.—In all the cases of cholera, except one, returned by the Coroner, the cause of death was certified by Medical Attendant.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 29th July, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Wind as deduced from Osler's Anemometer.					Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0—10	Rain in inches, read at midnight
			Dry			Dew Point	In the sun, as shown by a self-register- ing Thermometer read at midnight	Lowest on the grass, as shown by a self-register- ing Thermometer read at midnight	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean from 6 Diffs.	Greatest	Least	General Direction		Pressure in lbs. on the square foot

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn till noon. Positive with moderate tension during the remainder of the day.	The sky was generally overcast till noon; from thence till 5h. p.m. the clouds were occasionally broken, and the sky was overcast afterwards. Rain was falling from 5h. 30m. p.m. till midnight.
MON.	Positive with very weak tension at 6h. a.m., and moderate at noon. Nothing was shewn at any other times.	The sky was overcast till noon, the amount of cloud was variable afterwards till 9h. p.m., and generally clear till midnight; cumuli, cirrostrati, and scud. Rain was falling from 6h. till 6h. a.m.
TUES.	Positive and weak at midnight. Nothing was shewn at any other time.	With the exception of a few breaks that occurred in the clouds between 5h. and 7h. p.m. the sky was overcast throughout the day; cirrostratus and scud. Rain was falling from 5h. 30m. a.m. till 2h. p.m., and occasionally in showers afterwards.
WED.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling frequently.
THURS.	Nothing was shewn till 3h. p.m. Positive with weak tension afterwards.	The sky was cloudless at 6h. a.m.; generally overcast till 7h. p.m., and clear afterwards; cirrostratus and scud. Some showers of rain fell during the evening.
FRID.	Nothing was shewn till noon. From noon till 6h. p.m. positive with moderate tension. Nothing was shewn afterwards.	Three-fourths of the sky were generally covered till 9h. p.m., and overcast afterwards. Cumuli, cumulostrati, cirrostrati, and scud.
SAT.	Positive and tension strong between noon and 3h. p.m. Nothing was shewn at any other times.	The sky was overcast till 10h. a.m., three-fourths were covered till 5h. p.m., again overcast until 8h. 30m. p.m., and clear afterwards. Cumuli, cumulostrati, cirrostrati and scud. Meteors were abundant during the evening; their general direction was towards a point in the N. or N.W. horizon.

The height of the column of the barometer is considered to be 459 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1848.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that in which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847; December 31.—See *Phil. Trans.* Part 1, 1848.

In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower;" than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 58°2; and the mean reading at 6h. p.m. was 64°6; the mean readings at the Royal Observatory for the same times were 57°6 and 63°9 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING JULY 29, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, July 23, the lowest temperature of the air, early in the morning, was 56°; this value increased to 63° by 7h. a.m.; and after this time the increase was gradual till 2h. 45m., when the value was 74°5; it then turned to decrease, and was 55° at midnight. On Monday, till 5h. a.m., the temperature was 55° without variation; its increase after this time was very slow; at 8h. a.m. the temperature was 58°5; at noon it was 67°, and remained at this value till 2h. p.m.; it then increased to 71° at 3h. p.m., its maximum value for the day; and it was 54° at midnight. On Tuesday the sky was overcast, and rain was falling generally; the usual diurnal rise and fall of temperature did not take place; the lowest temperature occurred in the morning, and was 54°; and the highest took place at 6h. p.m., and was 67°. On Wednesday the sky was cloudy, and rain was falling frequently, and the diurnal range of temperature was small; the lowest value occurred early in the morning, and was 55°; by 7h. a.m. the value was 62°5; at 2h. p.m. it was 67°; and at midnight it was 62°. On Thursday the lowest temperature, early in the morning, was 55°; this value increased to 71° by 2h. p.m., and decreased to 57° by midnight. On Friday the lowest temperature, early in the morning, was 56°; at 8h. a.m. the temperature was 70°; and it was 59° at midnight. On Saturday, till 7h. a.m., the temperature was 58° without variation; by 8h. a.m. it had increased to 60°3, and at noon reached its maximum value for the day, viz., 74°; and at midnight it was 62°.

The average temperature of the air for each day was as follows:—

Sunday, 62°5; Monday, 61°; Tuesday, 59°1; Wednesday, 61°; Thursday, 61°5; Friday, 63°; and Saturday, 64°3.

The difference of temperature during each day was as follows:—

Sunday, 21°; Monday, 17°3; Tuesday, 12°5; Wednesday, 12°1; Thursday, 16°; Friday, 18°; and Saturday, 16°5.

The difference of temperature of the air during the week was 21°.

The average temperature of the Dew Point was as follows:—

Sunday, 56°5; Monday, 53°; Tuesday, 56°; Wednesday, 58°; Thursday, 55°; Friday, 53°; and Saturday, 53°5.

The average weight of water mixed with a cubic foot of air was as follows:—

Sunday, 5.3 gr.; Monday, 4.6 gr.; Tuesday, 5.1 gr.; Wednesday, 5.4 gr.; Thursday, 5.1 gr.; Friday, 4.6 gr.; and Saturday, 4.7 gr.

The following Table shews the comparative Meteorology since the year 1811.

Week ending July 29.	In the Years,							Excess or Deficiency in the week ending July 29, above or below that in the years *						Deficiency in the year 1848
	1842	1843	1841	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	60°0	59°2	67°0	57°6	65°2	61°1	61°9	+ 1°9	+ 2°7	— 5°1	+ 1°3	— 3°3	— 2°2	0°2
Temperature of the Dew Point	53°5	54°7	58°7	53°8	57°8	53°1	55°0	+ 1°5	+ 0°3	— 3°7	+ 1°2	— 2°8	+ 1°9	0°2
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	4.7	4.9	5.5	4.8	5.6	4.6	5.0	+ 0.3	+ 0.1	— 0.5	+ 0.2	— 0.6	+ 0.4	0.0

* In reading this Table, it will be borne in mind that the plus sign (+), implies that the following number is read thus:—the temperature of the air for the week ending 1848, July 29, was 1.9 above the temperature of the corresponding week of 1842.

Births and Deaths registered in London,
During the Week ending Saturday, August 5th, 1848.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 30.

(The tabular abstract on the first page is for the week ending Saturday, Aug. 5th. The following selection of cases is made from the Returns for the week ending July 29th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued)	duration	Fractures and Contusions (continued):—	duration
F. G (no inquest), injury of the spine from a fall, and psoas abscess	4 years	In St. Thomas' Hospital, fruiterer, 81, exhaustion caused by a fracture of the neck of his right thigh bone, from a fall at Walworth-road	7 weeks	In Guy's Hospital, carman, 37, tetanus caused by a wound of his right foot, by a piece of timber falling on it at the Bricklayers' Arms Station (placed to tetanus in abstract) 9 days

first attack—not vaccinated.		pneumonia, 24 to 30 hours	*	miliary tubercles in both lungs—cavities with fibrinous clots in left apex.	
ST. GEORGE; Saffron Hill.		In King's College Hospital, M. 68 (post mort.) stone in the bladder	*	F. 2, scarlatina	5 days
F. 4, small pox (vaccinated without effect) ..	7 days	phlebitis after lithotomy	5 days	convulsions	*
WEST LONDON; South.		ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 2; sudden hæmorrhage, 1; disease of heart, 3; English cholera, 1; violence, 27; other specified causes, 6; "found dead," "natural death," "visitation of God," &c., 2.—TOTAL, 42 cases.		NOTE.—The above death occurred in a 6-roomed house, inhabited by 41 persons. Mr. Butterfield, the Registrar, adds, that 14 cases of scarlet fever had occurred in this house within two months, which however, in one exception, did not terminate fatally.	
F. 4, small pox (natural)	*	THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 51.			

Cases of CHOLERA returned in the Week ending Aug. 5th.—(All are certified by Medical Attendant.)

In St. Margaret, Westminster, a boy under 1 year, "atrophy (4 months' duration)"	In same sub-district, at No. 11, Little Bacon-street, daughter of a coach-maker, "dentition (3 weeks' duration)—cholera (8 days)."
In Chelsea (North-east sub-district), a boy aged 4 months, "cholera infantum (3 days' duration)."	In Christchurch, St. Saviour's, F. 62, "cholera (4 days' duration)."
In Christchurch, Marylebone, M. 66, "English cholera morbus (3 days' duration)."	In St. Peter, Walworth, a boy 8 months and 3 days, "cholera endemica—fever terminating in cerebral effusion (8 or 9 days)."
In same sub-district, a girl 3 years, "infantile cholera (20 hours' duration)—pre-disposed to cerebral disease."	In Kennington, at No. 2, Princes-place, Dorset-street, son of a clerk on the South Western Railway, aged 7 months, "cholera infantum (2 days' duration)."
In Somers Town, a boy 2 years, "English cholera (12 days' duration)."	In St. Giles, Camberwell, at No. 3, South-street, daughter of a labourer, aged 4 years and 9 months, "cholera (9 days' duration)."
In West sub-district of Islington, a girl aged 13 months "English cholera (5 days' duration)."	In St. George, Camberwell (sub-district), at No. 13, Camden-place, Southampton street, daughter of a hair-dresser, aged 3 years, "English cholera (7 days)."
In Saffron-hill, M. 66 years, "cholera (30 hours' duration)."	In sub-district of St. Paul's, Deptford, Greenwich, boy 11 months, "English cholera (9 days)."
In Holywell and Moorfields, Shoreditch, a boy 2 years, "English cholera (1 week's duration)."	In St. Nicholas, Deptford, F. 38 years, "cholera."
In same sub-district, a boy 2 months "English cholera (7 days' duration)."	In East sub-district of Greenwich, M. 68 years, "cholera spasmodica (9 days' duration)."
In St. Leonard's, Shoreditch, a girl 1 year, "English cholera (6 days)."	In Lewisham Village (sub-district) M. 46, cholera, 88 hours; viz., 19 hours without advice—16 hours cholera—30 hours rallied—23 in a state of collapse."
In Bethnal-green (Town), at No. 25, Patience-street, son of a carver, aged 9 months, "cholera (5 days' duration)."	

NOTE.—Mr. Jordan, Registrar of Belgrave sub-district, mentions, that amongst the several cases of sickness and diarrhœa he has been called to attend, they could be mostly traced to some indigestible and crude food, such as liver and bacon, fruit to infants, and the like.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension moderate throughout the day.	The sky was covered throughout the day with cumulostrati, cirrostrati and scud. A shower of rain fell at 4h. 30m. p.m., and heavy rain fell between 6h. and 10h. p.m.
MON.	Positive and weak from 6h. p.m. till midnight. Nothing was shewn at any other times.	The sky was overcast till noon; from this time till 6h. p.m. the amount of cloud was variable; overcast afterwards; cirrostrati and scud. Rain was falling heavily between 7h. and 9h. a.m., and in frequent showers during the remainder of the morning.
TUES.	Nothing was shewn till near noon. Negative and occasionally positive, with strong tension from noon till 2h. p.m.; sparks and galvanic currents were shewn. Nothing was shewn afterwards.	The sky was generally overcast till 4h. p.m., and one-half covered afterwards; cumuli, cirrostrati and scud. Heavy rain was falling during the morning accompanied with loud claps of thunder. At 11h. 53m. p.m. a brilliant meteor was observed passing over Paris in a horizontal direction towards the W., it lasted about 2-sec. and was seen through an arc of 20°.
WED.	Positive with moderate tension throughout the day, except at 9h. a.m. when nothing was shewn.	Three-fourths of the sky were covered till 3h. p.m.; overcast afterwards; cumuli, cirrostrati and scud. A heavy shower of rain fell at 6h. 30m. p.m.
THURS.	At 6h. a.m. and at 3h. p.m. nothing was shewn. Positive with very strong tension at other times.	The sky was generally overcast throughout the day; cirrostrati and scud. Rain was falling between 6h. and 9h. a.m. Frequent claps of thunder were heard during the evening.
FRID.	Positive and tension variable throughout the day.	The sky was generally clear till 8h. a.m.; during the remainder of the day the amount of cloud was variable the sky being at times one half or three-fourths covered, and at times clear; the prevailing clouds were cumuli, cirrostrati and scud.
SAT.	Positive and tension weak at 6h. a.m. and moderately strong at 3h. p.m. Nothing was shewn at any other time.	Some small breaks occurred in the clouds during the afternoon and evening, but generally the sky was overcast throughout the day; cirrostrati and scud. Heavy showers of rain were frequent; at 11h. 25m. a vivid flash of lightning was observed followed by a loud clap of thunder 6sec. afterwards; heavy rain was falling at the time.

The height of the cistern of the barometer is considered to be 59 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 10th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 57.0; and the mean reading at 6h. p.m. was 62.2; the mean readings at the Royal Observatory for the same times were 56.3 and 61.5 respectively.

REMARKS ON THE WEATHER DURING THE WEEK ENDING AUGUST 5, 1848, AS OBSERVED AT BLACKHEATH.—By Mr. GLAISHER.

On Sunday, July 30, the lowest temperature of the air, during the day took place early in the morning and was 52°·5; this value increased to 61°·5 by 8h. a.m. to 70° by 11h. a.m., and to 71°·5 at 1h. 15m. p.m., it then turned to decrease, was 57°·5 at midnight, and it shortly afterwards turned to increase. On Monday at 6h. a.m. the temperature was 62°, it continued at this value till after 9h. a.m., between these times heavy rain was falling; at 10h. a.m. it was 66°·5; at 10h. 40m. it was 64°; at noon it was 66°; at 2h. p.m. it was 70°, and at about this time the highest value for the day was reached, viz. 72°; it then turned to decrease—it was 69° at 3h. p.m.; 59°·5 at 8h. p.m., and it was 58° at midnight. Rain was falling frequently during this day. On Tuesday, August 1, the lowest temperature early in the morning was 54°; at 7h. a.m. the temperature was 58°·5; at 8h. a.m. it was 60°·5; at 10h. 30m. it was 62°; at noon it was 61°; at 4h. 15m. p.m. 57°; at this time there was a heavy squall of rain and hail, and thunder was heard; at 2h. the value was 59°; at 3h. p.m. it was 62°; at 8h. p.m. it was 63°·5; at 8h. p.m. it was 59°·8; at 11h. p.m. it was 57°, and it was 55° at midnight. The highest value reached this day was 67°·2, but it is not known at what time it took place. On Wednesday the lowest temperature early in the morning was 53°; this value increased to 70°·3 by 1h. 50m. p.m., and decreased to 55° by 8h. p.m., at which value it continued till midnight. On Thursday the lowest value early in the morning was 49°·5; at 7h. a.m. the temperature was 57°, its increase during the morning was very gradual, at noon it was 61°; between noon and 1h. p.m. it was 65°·5; at 1h. p.m. it was 62°, and it was 53° at midnight; at times during this day the temperature was stationary for one or two hours together, the day was dull and rain was falling occasionally. On Friday the temperature early in the morning was 48°·1; at 7h. a.m. it was 52°; at noon it was 63°; at 2h. 30m. it was 70°; at 3h. p.m. it was 67°·5; between the hours of 8h. p.m. and 10h. p.m. it was 55°, and it was 53°·5 at midnight. The sky was for the most part cloudy and rain was falling in the evening. On Saturday the lowest temperature early in the morning was 51°·8; at 7h. a.m. the temperature was 59°; at 9h. a.m. it was 62°·5; at 10h. 30m. it was 61°·5; at 2h. p.m. it was 65°; at 3h. p.m. it was 64°·5; at 5h. p.m. it was 65°·2; at 8h. p.m. it was 60°, and it was 59° at midnight. The weather during the week has been dull and exceedingly unsettled.

The average temperature of the air for each day was as follows:—
Sunday, 61°·7; Monday, 63°·5; Tuesday, 60°·5; Wednesday, 60°·6; Thursday, 56°·5; Friday, 53°·5; and Saturday, 59°·2.

The difference of temperature during each day was as follows:—
Sunday, 18°·5; Monday, 11°·0; Tuesday, 13°·2; Wednesday, 17°·3; Thursday, 16°·0; Friday, 21°·9; and Saturday, 14°·7.

The difference of temperature of the air during the week was 23°·9.

The average temperature of the Dew Point was as follows:—
Sunday, 55°·5; Monday, 58°·5; Tuesday, 55°·0; Wednesday, 51°·5; Thursday, 51°·5; Friday, 50°·5; and Saturday, 51°·0.

The average weight of water mixed with a cubic foot of air was as follows:—
Sunday, 5.1 gr.; Monday, 5.8 gr.; Tuesday, 4.9 gr.; Wednesday, 4.3 gr.; Thursday, 4.3 gr.; Friday, 4.3 gr.; and Saturday, 4.5 gr.

The following Table shews the comparative Meteorology since the year 1841.

Week ending August 5.	In the Years,							Excess or Deficiency in the week ending August 5, above or below that in the years *						Deficiency in the year 18
	1842	1843	1844	1845	1846	1847	1848	1842	1843	1844	1845	1846	1847	
Temperature of the Air	63.2	58.4	57.7	58.2	68.9	64.5	60.1	-3.1	+1.7	+2.4	+1.9	-8.8	-4.4	1.7
Temperature of the Dew Point	55.8	54.8	52.3	54.2	61.8	53.9	53.4	-2.1	-1.4	+1.1	-0.8	-8.4	-0.5	2.4
	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.	gr.
Mean Amount of Water in a Cubic Foot of Air	5.1	4.9	4.6	4.8	5.6	4.8	4.7	-0.4	-0.2	+0.1	-0.1	-0.9	-0.1	0.4

* In reading this Table, it will be borne in mind that the sign (—), implies that the following number is read thus:—the temperature of the air for the week ending 1848, August 5, was 3.1 below the temperature of the corresponding week of 1842.

Births and Deaths registered in London,

During the Week ending Saturday, August 12th, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 31.

(The tabular abstract on the first page is for the week ending Saturday, Aug. 12th. The following selection of cases is made from the Returns for the week ending Aug. 5th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Burns and Scalds:—	duration
Son of a shoemaker, 14, natural death from fever, accelerated by a fall	*	F. servant 23, found dead—apparently drowned.		Musician, 67, very infirm—burns from his night dress taking fire accidentally . . about 2 hours	
F. newly born, asphyxia produced by manual compression of the body breaking down the structure of the liver—wilful murder against some person or persons unknown		F. age unknown (p.m.), found dead without marks of violence, in Canal Basin, apparently drowned.		Poison:—	
M. 55 (no inq.), fractured os calcis	3 months	Hanging:—		M. about 50, poisoned himself by taking arsenic (in temporary insanity)	12 hours
anasarca—hydrothorax	4 weeks	M. 37, hanged himself by a handkerchief and cord to a hook, his feet not being off the ground (temporary insanity).		Wife of a surgeon, 24, prussic acid (suicide when insane)	a few minutes
Wounds:—				M. 5 weeks, natural death, which may have been accelerated by Dalby's carminative given as a dose to allay pain, but not to destroy life	*
No deaths under this head in abstract.					

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HEMORRHAGE, HEMATEMESIS, ETC.

Small Pox:—	duration	WHITECHAPEL; Spitalfields.	duration	Childbirth:—	duration	
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.						
CHELSEA; South.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension strong throughout the day.	One-third portion of the sky was covered till near noon, generally overcast from noon till 10h. p.m. and clear afterwards; cumuli, cirrostratus and scud. A heavy shower of rain fell between 8h. 20m. p.m. and 9h. p.m.
MON.	At 6h. a.m. nothing was shewn. Positive and tension moderate during the remainder of the day.	The sky was cloudless till 9h. a.m., about one-half covered till 8h. p.m., and clear afterwards. Cumuli, cirrostratus, decaying clouds, and scud.
TUES.	Positive and tension strong till 10h. a.m. Negative and active till 3h. p.m. Positive and tension weak during the remainder of the day.	The sky was overcast till shortly before midnight; cirrostratus and scud. Rain was falling from 11h. 30m. a.m. till 5h. 30m. p.m. and again from 8h. p.m. till 11h. 30m. p.m.
WED.	Nothing was shewn till near noon. Negative and frequently very active till 6h. p.m. Nothing was shewn afterwards.	The sky was generally clear till 5h. a.m., three-fourths and frequently the whole were covered till 4h. p.m., variable in amount till 6h. p.m., and clear afterwards. A heavy shower of rain fell from 1h. 40m. p.m. till 2h. 30m. p.m. Meteors were abundant during the evening.
THURS.	Positive and weak tension at 9h. a.m. and at 3h. p.m. Negative and strongly active from 6h. to 7h. 15m. p.m.; frequent sparks and galvanic currents were shewn. Nothing was shewn afterwards.	The sky was generally free from cloud till noon, and variable in amount during the remainder of the day. Between 6h. p.m. and 7h. 15m. p.m. a violent thunder storm occurred. Several meteors were seen during the evening.
FRID.	Positive and tension variable between noon and 3h. p.m. Nothing was shewn at any other time.	The clouds were slightly broken during the morning, otherwise the sky was overcast throughout the day. Rain began to fall at 5h. p.m. and continued falling with slight intermissions till midnight.
SAT.	Positive and tension strong at 6h. p.m. Nothing was shewn at any other times.	The sky was overcast throughout the day; cirrostratus and scud.

The height of the elstern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10, and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans. Part 1*, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans. Part 1*, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 52.7; and the mean reading at 6h. p.m. was 61.8; the mean readings at the Royal Observatory for the same times were 51.5 and 60.3 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, August 19th, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

† The Returns from Mr. James Leonard, Mr. John Archer, and Mr. William Christnet—for the Sub-districts of Charing Cross, Whitecross Street, and Putney, were not received by Post, on Monday, in time for publication. The united averages of the three districts, derived from births and deaths, of the preceding six weeks, amount to 15 births and 15 deaths. The average deaths are placed to causes not specified.

* The age of a male who died from small pox is not stated.

This table contains throughout the Deaths in Wandsworth and Clapham; Lewisham and Hampstead.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 32.

(The tabular abstract on the first page is for the week ending Saturday, Aug. 19th. The following selection of cases is made from the Returns for the week ending Aug. 12th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Hanging:—	duration
M. 3, accidental death by being run over by a cart, drawn by one horse.	instant	Brass-worker, 18, accidentally drowned while bathing.		Mariner, 31, hanged himself in a state of temporary insanity.	
Weaver, 26, blows on the 4th of June, 1848, but how received no evidence	*	Son of a stamper at Somerset House, 12, drowned by falling in from the edge of a punt, as he moved it with a pole instead of rowing.		Poison:—	
F. 37 (post mort.), fracture of the head, producing effusion of the brain—how caused unknown	*	Daughter of a weaver, 15, found dead in the Regent's Canal, apparently drowned (no marks of violence).		No deaths under this head in the week.	
F. 3 days (no inquest), long continued compression during parturition.	*	Cooper, 48, found dead without marks of violence—apparently drowned.		Other Violence:—	
Wounds:—				M. 2 (no inquest), accidental hydrocephalus	3 weeks
No deaths under this head in the abstract of the week.					

DEATHS BY SMALL POX, SYPHILIS, MALPORNATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Smallpox (continued).—	duration	Phthisis; Disease of Heart (with Childbirth):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		SHOREDITCH; Haggerstone West.		F. 29, phthisis	2 years
CHELSEA; South.		M. 10 months, smallpox (modified).	5 days	premature childbirth	*
M. 2, variola confluens (not vaccinated).	10 days	convulsions	12 hours	F. 20, general dropsy from disease of heart	*
M. 2, variola confluens (not known whether vaccinated)	13 days	vaccinated when 4 months old with effect—marks visible.		peritonitis, 9 days after childbirth.	
M. 2, variola confluens (not known whether vaccinated)	11 days	WHITECHAPEL; Spitalfields.		Delirium Tremens:—	
St. GEORGE, Hanover-square; Belgrave.		M. 7, confluent smallpox (not vaccinated)	2 weeks	M. 50, delirium tremens, with low fever	3 weeks
F. 6 wks, smallpox (not vaccinated)	10 days	St. GEORGE IN THE EAST; St. Paul.		M. 30, delirium tremens	*
F. 1, confluent smallpox (not vaccinated—no medical attendant	10 days	M. 9 days, (ing.) natural death, smallpox partly developed	*	M. 38, delirium tremens—epilepsy	4 days
WESTMINSTER; St. John the Evangelist.		POPLAR; Poplar.		Other Diseases and Delirium Tremens:—	
M. 5, malignant smallpox (not vaccinated)	9 days	M. 9 months, smallpox (not vaccinated)	6 days	M. 40, encephalitis	7 weeks
F. 10 wks, smallpox (not vaccinated)	2 weeks	F. 10 months, smallpox (not vaccinated)	10 days	delirium tremens	*
St. Margaret.		St. GEORGE, SOUTHWARK; Kent-road.		bronchitis	18 months
M. 2, variola (not vaccinated)	*	M. 10 months, smallpox (not vaccinated)	*	In King's College Hospital, M. 42 (p.m.), cirrhosis	*
M. 5 months, variola (not vaccinated).	8 days	F. 2, smallpox	9 days	delirium tremens	7 days
F. 3, variola (not vaccinated)	10 days	vaccinated without effect.		Intemperance:—	
MARYLEBONE; St. Mary.		St. MARY, NEWINGTON; Trinity.		M. 31, delirium tremens, brought on by intoxication	*
F. 1, smallpox (not vaccinated)	15 days	M. 6 months, scarlatina	4 days	Privation:—	
St. PANCRAZ; Camden Town.		smallpox (unprotected)	*	No deaths under this head in the week.	
In Smallpox Hospital, M. 40, smallpox confluent (unmodified)	17 days	the informant stated that the eruptions of scarlatina and smallpox appeared simultaneously.		Want of Breast-milk; Inanition:—	
said to have been vaccinated when young at Dawlick—one cicatrix to have remained, which is not now perceptible from the confluent state of the disease.		LAMBETH; Waterloo (first part).		F. 3 weeks (inquest), natural death from atrophy for want of mother's milk	7 days
In Smallpox Hospital, M. 38, smallpox confluent (unprotected).	*	M. 2, smallpox (not vaccinated)	*	M. 5 weeks, marasmus from defective nourishment	14 days
In Smallpox Hospital, M. 17, smallpox confluent (unmodified)	*	M. 6 weeks, smallpox	14 days	M. 3 months, decline from want of breast-milk	*
said to have been vaccinated young at St. George's Hospital—no cicatrix.		convulsions	5 days	F. 5 weeks, improper nourishment—want of breast-milk—diarrhoea	from birth
In Smallpox Hospital, M. 19, smallpox confluent (modified)	9 days	Waterloo (second part).		M. (age —) debility from want of breast milk—convulsions	2 days
said to have been vaccinated when young in London—no cicatrix—hospital gangrene.		F. 3, variola	8 days	M. 2 weeks, inanition	3 weeks
F. 3, smallpox (not vaccinated)	14 days	Syphilis:—		M. 2 days, inanition	*
HACKNEY; Hackney.		No deaths under this head in the abstract of the week.		Mesenteric Disease and Want of Breast-milk:—	
F. 1, smallpox.	11 days	Malformation:—		F. 4 months, mesenteric disease, 4 weeks without the breast.	
St. LUKE; Finchbury.		F. 1 month, congenital hydrocephalus from malformation.		Purpura:—	
M. 6 months, smallpox (after vaccination).	*	F. 17 days, spina bifida.		No deaths under this head in the week.	
EAST LONDON; Cripplegate.		Hernia:—		Hæmorrhage, Hæmatemesis, &c.:—	
M. 2, smallpox	*	In St. Bartholomew's Hospital, M. 6 months, strangulated hernia—operation.		M. 64, (ing.), sudden loss of blood from the chest—not previously ill.	*
WEST LONDON; South.		In St. Bartholomew's Hospital, F. 42, strangulated hernia, operation.	*	F. 41, (p.m.) anæmia from menorrhagia	*
M. 4 months, variola	9 days	Diabetes:—		Miscellaneous Cases:—	
North.		No deaths under this head in the week.		M. about 4 months (inquest) serous effusion into the brain after exposure and abandonment in Gray's-inn-road	9 days before death
M. 4, smallpox (natural)	10 days	Stone:—		F. 2, debility from long suckling	*
SHOREDITCH; Holywell and Moorfields.		M. 42 (post mort.), calculus in ureter	4 years	M. 38, dysentery followed by chronic diarrhoea acquired in Ceylon	*
F. 10 months, variola confluent (not vaccinated)	10 days	abscess of right kidney	18 months	chronic bronchitis	6 months
St. Leonard's.		Childbirth:—		M. 8 months, dysentery	3 days
F. 2, smallpox (not vaccinated)	16 days	The time elapsing from commencement of labour to death should invariably be returned.		Mr. Clark, the Registrar of Peckham, states, that the above case was attributed to the noxious vapours from the overflowing of a privy, caused by the late heavy rains. In the same family three children and the mother were also suffering from the same disease.	
		F. 27, childbirth.	10 days	NOTE.—Mr. Gathercole, Registrar of St. Nicholas, Deptford, states, that scarlatina is very prevalent in his district.	
		F. 37, phlebitis	5 days		
		F. 37, puerperal peritonitis	5 days		
		F. 25, puerperal peritonitis	60 hours		
		F. 36 (inquest), natural death from exhaustion in labour	16 hours		
		F. 23, diarrhoea after delivery	*		
		F. 29, difficult labour	24 hours		
		diarrhoea	4 hours		

ANALYSIS OF CASES IN WHICH INQUESTS WERE MADE.—Small pox, 1; childbirth, 1; exposure, 1; apoplexy, 5; rupture of vessel, 1; disease of heart, 2; violence, 8; other specified causes, 6; "found dead," "natural death," "visitation of God," &c., 7.—TOTAL, 32 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 43.

Cases of CHOLERA returned in the Week ending Aug. 19th.—(All except one are certified by Medical Attendant.)

In Long Acre, hoy, 10 weeks, "cholera infantum (10 days' duration.)"	In Church, (sub-district) Bethnal-green, F. 67 years, "neglected English cholera, brought on by intemperate habits (about 48 hours' duration.)"—(Inquest.)
In Grays-inn-lane, boy, 6 years, "cholera (3 days' duration.)"	In Hackney-road, girl, 5 years, "diarrhoea (2 days' duration) cholera."
In St. Anne, Westminster, F. 51 years, "paralysis 2nd attack, epidemic cholera (13 or 14 days' duration.)"	In St. John, St. George-in-the-East, at No. 5, Satter's-alley, daughter of a carpenter, aged 17 years, "cholera morbus—English."
In Saffron-hill, girl, 9½ years, "cholera (3 days' duration.)"	In Lambeth Church, 2nd part, son of a potter, 66, Tyers-street, aged 6 years, "cholera (36 hours' duration.)"
In Amwell, Clerkenwell, M. 59 years, "diarrhoea (3 days' duration), cholera (56 hours.)"	In Peckham, at No. 12, St. James's-terrace, Commercial-road, cashier in banking-house, aged 64 years, "paralysis (6 months' duration) vomiting (1 month) cholera (4 days) apoplexy (3 hours.)"
In St. Botolph, East London, boy, 6 years, son of a journeyman hatter, "cholera sporadic (4 days' duration), fever with head affection."	In Saint Paul's, Deptford, hoy, 5 months, "English cholera (3 weeks' duration.)"
In South-East District, City of London, girl, aged 1 year and 10 months, "cholera infantum (5 days' duration.)"	In Clapham, M. 50 years, "cholera and peritonitis (2 days' duration.)"
In Hoxton-new-town, Shoreditch, M. 54 years, "fever-cholera (about 36 hours' duration.)"	In Lewisham-village (sub-district), boy, 4 years, "epidemic cholera (30 hours' duration) convulsions (1 hour.)"
In Hoxton-old-town, hoy, 8 years, "diseased heart (3 months' duration) English cholera (24 hours.)"	

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 19th August, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature			Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension variable at each examination.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling from 6h. p.m. till midnight.
MON.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling from 0h. a.m. till 7h. p.m.
TUES.	Nothing was shewn till after noon. Positive and tension variable during the remainder of the day.	The clouds were slightly broken at 6h. p.m. and between 9h. and 11h. p.m., otherwise the sky was overcast throughout the day; cirrostratus and scud.
WED.	Positive and tension moderate throughout the day.	The sky was generally overcast throughout the day; cirrostratus and scud. From 2h. 10m. till 2h. 35m. a solar halo of 23½° radius was visible. A thick fog prevailed from 11h. p.m. till midnight.
THURS.	Positive, with very weak tension at midnight. Nothing was shewn at any other time.	The sky was about one-half covered at 9h. a.m. and also between 9h. 30m. and 11h. p.m. at other times it was overcast. A thick fog prevailed from 0h. a.m. till 8h. a.m. Rain was falling at intervals during the evening.
FRID.	Positive and tension strong at noon. Nothing was shewn at any other time.	The sky was overcast till 9h. a.m.; the amount of cloud that prevailed from this time till 2h. p.m. was small. The sky became suddenly overcast soon after 2h. p.m., and with slight exceptions remained so until midnight.
SAT.	Positive and tension moderate at 6h. p.m. Nothing was shewn at any other times.	The sky was overcast till 6h. p.m.; from this time until midnight the clouds were small in amount; cirrostratus, fleecy clouds, and scud. Rain was falling generally during the morning.

The height of the cistern of the barometer is considered to be 139 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flat glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1848.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 55.5; and the mean reading at 6h. p.m. was 62.1; the mean readings at the Royal Observatory for the same times were 55.6 and 61.5 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, August 26th, 1848.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 33.

(The tabular abstract on the first page is for the week ending Saturday, Aug. 26th. The following selection of cases is made from the Returns for the week ending Aug. 19th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—

duration

Of independent means, M. 76, mortification of back and hip, caused by an accidental fall *
M. 43, a fall in a passage, while intoxicated. *
M. 5, inflammation of the brain—from a fall. *
F. 45 (no inquest), intemperance—fall down stairs—convulsion fits. 2 days
Railway guard, 42, head crushed by a train of carriages, by falling when jumping off the same while in motion (accidental). 1 instant
Waggoner, about 60, accidentally killed by a locomotive engine, tender, and waggon passing over his legs, being thrown down on the rail by a horse *
Fireman of a locomotive steam-engine, 37, fracture of the skull, being struck down by a locomotive engine, on the Brighton Railway. 8 minutes
House-painter, 37, killed by the rear wheel of a certain cart passing over his body accidentally. 6 mins.

Fractures and Contusions (continued):—

duration

A porter, 30, injuries of the chest from being crushed by the wheels of a van, having fallen accidentally before them. 1 instant
Driver of a water-cart, 60, exhaustion from an injury of the right leg, caused by the horse he was driving in a water cart accidentally falling in the road, and throwing him off the front of the cart (amputation). *
Labourer, 18, accidentally jammed between the shaft of a brick cart and a tree—fractured ribs. 3½ hours
Wounds:—
M. 52, loss of blood from a cut throat (suicide)
Drowning:—
Working jeweller, 47, drowned accidentally going into the Surrey Canal to bathe. 5 minutes
Bargeman's assistant, 16, drowned by falling into the canal accidentally. 2 hours

Hanging and Suffocation:—

duration

M. 46, suffocation in attempting to swallow a piece of meat not masticated (imbecile). 10 minutes
M. 28, hung himself to a bed post with a silk handkerchief (of unsound mind). 1 instant

Burns and Scalds:—

Daughter of an ironmonger's clerk, 6 weeks, scald of the body by the accidental upsetting of a pot of boiling porridge, in absence of her mother. *

Poison:—

M. 42, suicide by poison (laudanum). 9 hours

Other Violence:—

M. 33, wilfully murdered by George Hewson (a prisoner).
M. 27, injured knee. 10 years
phthisis. 6 weeks

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HEMORRHAGE, HEMATEMESIS, ETC.

Small Pox:—

duration

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

KENSINGTON; Brompton.

M. 1, small pox (not vaccinated). 3 weeks

CHELSEA; South.

M. 2, variola (not vaccinated). 9 days

North-West.

M. 5, small pox (not vaccinated). 14 days

North East.

F. 4, small pox (not vaccinated). *

F. 2, variola confluent. 11 days
without previous vaccination.

St. GEORGE, Hanover-square; Belgrave.

M. 4, confluent small pox (never vaccinated). 14 days

M. 3, confluent small pox (never vaccinated). 14 days

F. 8, confluent small pox (not vaccinated). 14 days

WESTMINSTER; St. John the Evangelist.

M. 6, small pox (not vaccinated). 3 weeks

F. 7 months, confluent small pox. 8 days
not vaccinated.

F. 5, small pox (not vaccinated). 2 weeks

St. Margaret.

M. 1, variola (not vaccinated). 10 days

M. 7, small pox. *

M. 5, small pox ("not certain" if vaccinated). 1 month

F. 1, small pox. 3 weeks
(twice vaccinated at the age of six months without effect.)

St. JAMES', WESTMINSTER; St. James'-square.

F. (— age), confluent small pox. 17 days
not vaccinated.

MARYLEBONE; St. Mary.

M. 7 weeks, small pox (not vaccinated). 14 days

St. John.

M. 18 months, variola (not vaccinated). 6 days

St. PANCRAS; Tottenham.

M. 29, variola confluent. 13 days
(premature labour 10th day.)

Somers Town.

M. 3, small pox (without previous vaccination), 6 days
convulsions. 3 hours

Camden Town.

M. Small Pox Hospital, M. 30, small pox, confluent (unprotected). 11 days

M. Small Pox Hospital, F. 23, small pox, confluent (unprotected). 4 days

St. JAMES, CLERKENWELL; Amwell.

duration

F. 2, chicken pox. 1 week

diarrhoea. *

St. James.

F. 2, small pox, confluent (not vaccinated). 12 days

WHITECHAPEL; Spitalfields.

F. 2, small pox (not vaccinated). 1 week

North.

M. 21 months, typhoid small pox (not vaccin.) 2 weeks

STEPNEY; Shadwell and Wapping.

M. 8, small pox—confluent. 11 days
vaccinated without effect.

BERMONDSEY; The Leather Market.

M. 6 months, variola (natural). *

St. GEORGE, SOUTHWARK; Kent Road.

F. 2, small pox (not vaccinated). *

F. 2, small pox (not vaccinated). *

GREENWICH; Woolwich Arsenal.

F. 2, small pox (not vaccinated). 9 days

Woolwich Dock Yard.

F. 3, small pox (not vaccinated). *

Syphilis:—

F. 51, syphilis. 2 years

dropsy. 3 months

Malformation:—

M. 14 weeks, malformation of heart—difficulty of breathing.

M. 2 days, malformation—convulsions. 12 hours

Hernia:—

M. 53 (post mort.), hernia. 5 days

extensive disease of pancreas.

F. 60, ventral hernia. 4 years

general dropsy. 3 months

pulmonary apoplexy. 12 hours

Diabetes:—

F. 17, diabetes. *

Stone:—

M. 59, ulceration of kidneys, produced by stones found in them. *

Childbirth:—

The time elapsing from commencement of labour to death should invariably be returned.

F. 32, childbirth—puerperal fever. 5 days

F. 20, childbirth. 3 days

puerperal fever. *

F. 33, puerperal peritonitis. 5 days

F. 29, pneumonia—childbirth. *

Childbirth (continued):—

duration

F. 29, childbirth—puerperal peritonitis. 10 days

F. 28, childbirth. 17 days

hysteritis—peritonitis—pleuro peritonitis, 7 days

F. 21, puerperal fever—diseased lungs. *

F. 25, dilatation of heart. 6 months

miscarriage. 24 hours

Delirium Tremens:—

M. 40, delirium tremens. 2 days

M. 48, delirium tremens. 6 weeks

F. 39, delirium tremens—phthisis. *

Intemperance:—

F. 52, intemperance. 2 months

F. 54, intemperance—pneumonia—morbus cerebri. *

Privation:—

No deaths under this head in the week.

Want of Breast-milk; Inanition, &c:—

M. 7 months, want of breast-milk. *

M. 4 months (inq., post mort.) natural inanition. *

M. 5 weeks, deprivation of breast-milk—marasmus. *

M. under 1 year, atrophy from want of proper nourishment, being suddenly deprived of breast-milk. *

F. 4 months, want of breast-milk. *

Purpura:—

No deaths under this head in the week.

Hæmorrhage, Hæmatemesis, &c:—

M. 47, chronic hepatic disease. some years

hæmatemesis. 24 hours

F. 52 (inquest), hæmorrhage from the natural rupture of a varicose vein. *

M. 61, hæmatemesis. 1 week

enlarged liver. *

M. 49, hæmatemesis—calculi in pancreatic ducts—rupture of one of the pancreatic vessels, causing hæmorrhage into abdomen. *

M. 85, old age, rupture of a bloodvessel in the bowels. *

M. 40 (post mort.), rupture of left pulmonary artery. *

Miscellaneous Cases:—

M. 27, diseased spine. 18 years

lumbar abscess. 6 years

diarrhoea. 3 weeks

F. 41, granular kidneys. 2 years

œdema. 2 months

coma. 16 hours

In Dreadnought Hospital, M. 16 (post mort.), inflammation of brain, with softening of central parts, miliary tubercles in lungs, liver, &c. *

In Dreadnought Hospital, M. 25 (post mort.), phthisis. 4 months

tubercular deposit in both lungs.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 3; disease of heart, 1; diarrhoea, 1; aneurism, 1; inanition, 1; asthma, 1; violence, 19; other specified causes, 3; "found dead," "natural death," "visitation of God," &c., 5.—TOTAL, 35 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 32.

Cases of CHOLERA returned in the Week ending Aug. 26th.—(All except one are certified by Medical Attendant.)

In Charing Cross, M. 66, "English cholera (4 days' duration)."

In West Hackney, M. 58, "colic;—cholera (4 days' duration)."

In same sub-district, girl 8 months "cholera (2½ days' duration); convulsions, (1 hour)."

In Hackney-road, Bethnal-green, boy, 6 months, "dentition (1 month's duration); cholera infantum, (5 days)."

In Shadwell and Wapping, Stepney, F. 82 years, "spasmodic cholera (4 days' duration). No medical attendant."

In St. Nicholas, Deptford, M. 7 years "cholera."

In Lambeth Church, 1st part, F. 12 years, "cholera (21 hours' duration)."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 26th August, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the temperature of the same day on an average of 7 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive, and tension moderate at noon, and at 3h. p.m. Nothing was shewn at any other examination.	One third of the sky was covered during the day with light portions of cumuli and fleecy clouds.
MON.	Positive, and tension moderate at noon. Nothing was shewn at any other time.	The sky was overcast till 11h. a.m., one half covered till 8h. p.m., and clear afterwards; cumuli, cirrostratus, and fleecy clouds. Rain was falling steadily from 6h. a.m., till 10h. 45m. a.m., and in frequent showers afterwards.
TUES.	Positive, and tension strong at 3h. p.m. Nothing was shewn at any other time.	The sky was generally overcast till 11h. a.m., one half covered till 6h. p.m., and clear afterwards; cumuli, cirrostratus and scud. Frequent showers of hail and rain occurred during the morning and afternoon.
WED.	Positive, and tension moderate at 9h. a.m., and at 3h. p.m. Nothing was shewn at any other time.	The sky was generally one half covered throughout the day; cumuli, cirrostratus and scud. A heavy shower of rain fell at 11h. 40m. p.m. Frequent flashes of lightning were seen between 9h. p.m., and midnight.
THURS.	Nothing was shewn throughout the day.	The amount of cloud that prevailed till 8h. p.m. was very variable, the sky being frequently overcast and at other times one half and three fourths covered; from 8h. p.m. till midnight the sky was clear. Cumuli, cirrostratus and scud. Rain was falling at intervals during the morning. Frequent flashes of lightning were seen during the evening.
FRID.	Nothing was shewn till near noon. Positive, and tension moderate afterwards.	With the exception of a few breaks that occurred in the clouds at 3h. p.m., the sky was generally overcast throughout the day; cirrostratus and scud. Rain was falling at intervals during the morning.
SAT.	Positive, and tension moderate at midnight. Nothing was shewn at any other time.	The clouds were slightly broken near 3h. p.m.; the sky was otherwise overcast throughout the day; cirrostratus and scud. Rain was falling frequently during the morning.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flat glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Aug. 22, the Anemometer was sent away for repair.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part. 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 53.1; and the mean reading at 6h. p.m. was 61.3; the mean readings at the Royal Observatory for the same times were 55.9 and 60.5 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, September 2nd, 1848.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 34.

(The tabular abstract on the first page is for the week ending Saturday, Sept. 2nd. The following selection of cases is made from the Returns for the week ending Aug. 26th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued)	duration
F. 2 (no inquest), hemiplegia from a fall and injury of the head—convulsions.....	*	In Guy's Hospital, son of a zinc-maker, 7 (post mort.), compression of the brain, from a fall from a van at Dulwich	34 hours	In Guy's Hospital, cab-driver, 34, injury to his right hand, caused by an accidental fall from a cab.....	*
M. 68, accidental death from a fall—fractured ribs.....	3 days	In Guy's Hospital, fruiterer, 43, delirium tremens, brought on by compound fracture of his right leg, from being run over by his own van at the Old Kent-road	3 days	F. 37, concussion of the brain, being knocked down accidentally by a street cabriolet	*
F. 23, suicide by throwing herself out of a window of the house No. 1, Hatfield-street, causing fracture of the skull, in a state of mental derangement	instant	In St. Thomas' Hospital, housekeeper, 44, fracture of his skull by falling off the roof of an omnibus at Newington Causeway, a few mins.		Wounds:—	
				No deaths enumerated under this head in abstract.	

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued).—

Drowning:—	duration	Drowning (continued):—	duration	Burns and Scalds:—	duration
Dress-maker, 19, drowned in the River Thames, by the upsetting of a boat accidentally (under water 4 days).		F. about 25 years, drowned—no marks of violence—no identity or proof how she came into the River Thames (under water about 12 hours.)		M. 4, scalds over the greater part of the body—accidentally fell into a tub of hot water, 32 hours	
F. 13, drowned in the River Thames, by the upsetting of a boat accidentally (under water 6 days).		M. 2, drowned by falling into a tank of water accidentally.....	10 minutes	Poison:—	
M. 13 drowned by falling accidentally out of a barge into the River Thames (under water 16 hours).		Hanged or Suffocated:—		F. 31 (post mort.), poisoned herself with oxalic acid (temporary insanity) ...	*
Apprentice to the sea-service, 16, found drowned in the River Thames off Bell Wharf—how drowned no evidence—no marks of violence (immersed 6 days).		Son of a shoemaker, under 1 year, suffocated accidentally when asleep in bed with his father and mother and another child (found dead in bed).		Other Violence:—	
F. 30, found drowned, how caused no evidence, no marks of violence (immersed about 7 days).		M. 1, accidentally suffocated in a privy.....	*	F. newly born—injuries of the head—wilfully murdered and abandoned by some persons unknown.	
				M. 19, sudden death after drinking cold water	

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Childbirth and Disease:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		St. LUKE; Finsbury.		F. 33 (post mort.), childbirth	8 days
KENSINGTON; St. John, Paddington.		F. 9 months, epilepsy	*	sudden death	15 minutes
M. 2, variola (not vaccinated)	14 days	small pox, after vaccination	*	It is stated in the certificate "that while sitting at tea, and quite well, she swooned and slipped out of her chair, with palpitation of the heart, brought on by seeing a woman beat a child, on the opposite side of the street. Both lungs closely adherent throughout, and congested of a dark red colour, crepitant; left side of heart empty, and without a trace of blood; brain and every other organ healthy."	
— Fulham.		WEST LONDON; South.		Delirium Tremens:—	
F. 7, confluent small pox	2 days	F. 3, small pox—convulsions	14 days	M. 42, delirium tremens	*
CHELSEA; South.		SHOREDITCH; Holywell and Moorfields.		M. 54, delirium tremens	4 days
F. under 1 year, variola confluent	10 days	M. 4, variola, confluent.....	16 days	epileptic fits	*
F. under 1 year, small pox (not vaccinated) ..	14 days	vaccination attempted without success.		Intemperance:—	
— North East.		STEPNEY; Ratcliffe.		Labourer, 33 (inquest), excessive drinking of ardent spirits	*
F. 6, variola confluent	13 days	F. 3, small pox	8 days	Privation:—No deaths under this head in the week.	
not previously vaccinated.		vaccinated a few days prior to the appearance of the eruption without success.		Purpura:—	
St. GEORGE, Hanover-square; Bclgrave.		St. SAVIOUR; St. Saviour.		F. 59, purpura hæmorrhagica	3 weeks
M. 5, small pox, semi-confluent	10 days	M. 2, small pox	1 week	Hæmorrhage, Hæmatemesis, &c.:—	
not vaccinated.		St. GEORGE, SOUTHWARK; Kent Road.		M. 23, rupture of a blood vessel	*
F. 31, variola confluent.....	8 days	F. 18 mo., small pox (not vaccinated).....	*	F. 36 (inquest), sudden hæmorrhage into the chest from a vessel of the heart.....	1 hour
uncertain whether vaccinated or not.		LAMBETH; Waterloo (first part).		F. 27, hæmorrhage from the uterus	8 hours
WESTMINSTER; St. John the Evangelist.		M. 5, variola, 2nd attack	14 days	If in childbirth it should be so stated in cases of this kind.	
F. 4, variola confluent (not vaccinated).....	14 days	GREENWICH; St. Paul's, Deptford.		M. 34 (inquest), natural death—flow of blood upon rupture of a vessel of the lungs	10 minutes
M. 5, small pox (not vaccinated).....	2 weeks	F. 2, small pox (not vaccinated)	7 days	F. 25, hæmatemesis with chlorosis	2 years
F. 1, variola confluent (not vaccinated).....	7 days	Syphilis:—		M. 41 (post mort.), extravasation of blood into the peritonæum	20 hours
F. 3 weeks, variola confluent (not vaccinated) 12 days		F. 3 months, syphilis.....	from birth	Hæmorrhage and Cancer:—	
F. 6, small pox (not vaccinated).....	1 week	Malformation:—		In University College Hospital, F. 47 (p.m.), uterine hæmorrhage	*
F. 2, small pox (not vaccinated).....	15 days	M. ½ an hour—the third anencephalus infant.		carcinomatous ulceration of cervix uteri.	
— St. Margaret.		Hernia:—		Want of Breast-milk; Inanition, &c.:—	
M. 1, variola	10 days	M. 63, morbus cordis.....	*	M. 3 weeks, diarrhœa, followed by debility from loss of its mother's milk.....	*
under 1 year, small pox—natural	11 days	hernia	5 years	M. 6 weeks, atrophy from want of breast-milk ..	*
not vaccinated.		F. 50, large ventral hernia	of long standing	M. 2 weeks, diarrhœa and atrophy, from want of breast-milk.....	since birth
MARYLEBONE; The Rectory.		strangulated	3 days	M. 3 weeks, atrophy from weaning.....	14 days
M. 4, variola (unvaccinated)	10 days	F. 62, strangulated femoral hernia.....	7 days	F. 4 months, derangement of the alimentary canal, consequent upon the use of artificial food, the mother being dead.	
— St. Mary.		mortification.		M. 5 days, inanition	*
M. 4, variola (not vaccinated)	*	Diabetes:—		M. 3 weeks, inanition—want of breast-milk ..	*
St. PANCRAS; Camden Town.		M. 71, diabetes	7 years	Miscellaneous Cases:—	
Small Pox Hospital, M. 23, small pox confluent (unprotected).....	9 days	Stone:—		F. 47, hypertrophy of the uterus.....	3 years
Small Pox Hospital, M. 23, small pox, confluent	38 days	No deaths under this head in the week.		hæmorrhage of uterus.....	2 years
said to have been inoculated when a boy in the Orkneys.		Childbirth:—		anasarca—ascites	2 months
— The Regent's Park.		The time elapsing from commencement of labour to death should invariably be returned.		In St. George's Hospital, F. 40 (post mort.), continued fever.....	24 days
M. 15 days, variola—convulsions	9 days	F. 21, metria	*	inflammation of dura mater, and effusion of serum into ventricles of brain.	
HOLBORN; St. Andrew, Eastern.		F. 33, puerperal fever	*	In University College Hospital, M. 56 (p.m.), inanition from carcinoma of œsophagus ..	2 months
M. 5, small pox (vaccinated at 6 months old), 6 days		F. 40, abortion—anaemia	*	F. 2, mumps	9 days
M. 1, small pox	14 days	F. 33, premature labour—exhaustion from vomiting	10 days	asphyxia—debility.	
convulsions	1 hour	F. 37, hysteritis.....	*	M. 4 (post mort.), old disease of brain—albuminous and sanguineous urine.....	15 days
(not vaccinated).		F. 30, internal bleeding after childbirth	*	convulsions	6 days
M. 13 months, chicken pox—hydrocephalus—convulsions	3 weeks	F. 30, anæmia arising from flooding after delivery, at the 7th month.....	22 days	ischuria	24 hours
St. JAMES, CLERKENWELL; St. James.				NOTE.—Not to extend the list of diseases to too great a length, a F. age 2, mumps, is referred in the abstract to the same head as scarlatina; M. 63, F. 45, & 68, hydrothorax to dropsy; M. 66 & 36, necrencephalus, to disease of brain, &c. &c.	
M. 10 months, small pox—natural.....	10 days				
without previous vaccination.					

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 3; disease of heart, 3; disease of lungs, 1; hæmorrhage, 2; convulsions, 1; asthma, 1; dropsy, 1; intemperance, 1; violence, 20; other specified causes, 4; "found dead," "natural death," "visitation of God," &c., 7.—TOTAL, 44 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 37.

DEATHS registered in LONDON, in series of weeks of nine years:—

Cases of CHOLERA returned in the Week ending Aug. 26th.—(All except two are certified by Medical Attendant.)

n Chelsea South, F. 69 years, "cholera (3 days' duration)."
n St. Mary, Marylebone, F. 36 years, "cholera (7 days' duration)."
n Hampstead, M. 34 years, "diarrhœa; cholera (5 days' duration)."
n Kentish Town, M. 6 months, "cholera infantum; effusion on the brain (11 days' duration)."
n St. Ann, Westminster, F. 23 years, "English cholera—duration unknown; found dead in bed—post mort., inquest."
n St. Paul, St. George in the East, M. 32 years, "English cholera (12 days' duration), being the 3rd attack in 14 weeks—liver in a softened state, abscess in left lobe; post mort."
n Camberwell, at 3 Liepsic-road, a labourer (formerly a soldier), aged 59 years, "English cholera (1 week's duration)."

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Thin rain was falling at intervals.
MON.	Positive and tension strong at 6h. p.m. Nothing was shewn at any other examination.	The clouds were slightly broken at 3h. p.m., the sky was otherwise overcast throughout the day; cumuli, cumulostrati, cirrostrati, and scud. Rain was falling occasionally during the evening.
TUES.	Nothing was shewn throughout the day.	Three-fourths of the sky were covered till 6h. a.m., overcast till 9h. p.m., and generally clear afterwards; cirrostratus and scud. A slight shower of rain fell at 2h. 30m. p.m.
WED.	Nothing was shewn throughout the day.	The sky was overcast till 10h. a.m.; from this time till 6h. p.m. the amount of cloud was small, and the sky was clear afterwards. Cumuli, cumulostrati, cirrostrati, and scud.
THURS.	Negative, and very active between 6h. and 7h. p.m.; sparks and galvanic currents were shewn. Nothing was shewn at any other time.	The sky was one-half covered till 6h. a.m., generally clear till noon, and overcast afterwards; cumuli, cirrostratus, and scud. Between 5h. 55m. p.m. and 7h. 40m. p.m., a thunder-storm occurred; the flashes of lightning were frequently very vivid, and the thunder followed at intervals of from 3sec. to 12sec.; some of the claps of thunder were very loud and of long duration; rain was falling heavily during the storm, and continued falling, but with less violence, till 11h. p.m.
FRID.	Nothing was shewn till 9h. a.m. Positive and tension moderate during the remainder of the day.	The sky was generally overcast till 7h. a.m., one-half covered till 7h. p.m., and clear afterwards; cumuli, cirrostrati, fleecy clouds, and haze.
SAT.	Positive and tension strong between 3h. and 6h. p.m.. Nothing was shewn at any other time.	The sky was cloudless till 10h. a.m., and again from 6h. p.m. till midnight. Between these times the clouds that prevailed were variable in amount; cirrostratus, fleecy clouds, scud, and haze.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first class standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The anemometer has been away for repair during the week. The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part. 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average. The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 55.1; and the mean reading at 6h. p.m. was 62.3; the mean readings at the Royal Observatory for the same times were 54.1 and 61.1 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, September 9th, 1848.

ANNUAL SERIES IX.]

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 35.

(The tabular abstract on the first page is for the week ending Saturday, Sept. 9th. The following selection of cases is made from the Returns for the week ending Sept. 2nd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued):—	duration
A warehouseman, 49, accidentally killed by being struck by the handle of a crane	*	In London Hospital, cork-cutter's child, M. 1, accidental by a fall from a window, causing concussion of the brain	1 day	In London Hospital, painter, 50, accidental from a fractured thigh, fell from a scaffold	2 weeks
A pauper, formerly a clerk to a broker, 67, injuries of the head, by throwing himself out of the window while insane	*	In London Hospital, labourer, 35, accidental from a lacerated toe, caused by the fall of a piece of iron retort	*	In London Hospital, labourer, 68, accidentally crushed by a hoghead of sugar rolling on him at the London Docks	1 day
In University College Hospital, wife of a tailor, 33, injuries of the head from a fall from the upper part of a house, while of unsound mind (not known if a suicide)	11 days	In London Hospital, labourer, 72, accidental from a fall of a bale of linen, causing fractured leg	3 weeks	In London Hospital, shipwright, 44, accidental by a fall from a ship—fractured thigh and erysipelas	*
In University College Hospital, F. 51, injuries of the head from a fall down stairs, occasioned by treading on her gown, both arms being occupied by an infant	32 hours	In London Hospital, tailor, 28, manslaughter against John Donovan—blow on forehead	*	In London Hospital, painter, 35, accidental by a fall from a window—fractured thigh	82 days
		In London Hospital, victualler's wife, 71, accidental from a fall in a room—broken thigh	5 weeks	In London Hospital, hawker, 45, threw himself out of a window, in a temporary state of insanity	*
		bedsore	2 weeks		

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Fractures and Contusions (continued):—	duration	Fractures and Contusions (continued):—	duration	Hanging, &c:—	duration
In London Hospital, labourer, 50, accidental by the fall of a bale of cotton on his head, 5 days		In University College Hospital, a railway porter, crushed by the buffer of a railway carriage, between which and some waggons he had placed himself incautiously	instantly	Prisoner (formerly a shoe-maker) 36, strangled with a rope, which he fastened to his hammock hook in his cell—found dead in a sitting posture (suicide)—temporary insanity.	
In Loudon Hospital, shepherd, 60, fractured head and dislocated arm, how caused no evidence to show	*	In London Hospital, solicitor, 47, killed by a train on the Eastern Counties' Railway, while walking on the line, but whether designedly or accidentally no sufficient evidence—fractured ribs.	9 hours	F. servant, 59, suicide by hanging when insane, —found dead, feet on the ground.	
In London Hospital, shoemaker, 70, accidental from falling from a second floor window—fractured skull	40 hours	Wounds:—		A pianoforte-maker, 40, suicide by strangulation during insanity, from habitual intoxication.	*
In London Hospital, labourer's son, 10, concussion of the brain from an accidental fall while cleaning a window on the first floor of a house	18 hours	In University College Hospital, son of a publican, 14, inflammation of the veins and abscesses following injuries of the finger, from the knife of a chaff-cutting-machine, from the handle slipping off	10 weeks	Carpenter, 53, suicide by hanging (insane).	
M. 77, fracture of arm	5 days	In University College Hospital, a student of medicine, 30, a pistol fired into his mouth in a street cab, Upper Gower-street.	*	Teacher, 35, hanged himself—temporary mental derangement from many disappointments in his profession.	
In University College Hospital, son of a porter, 4, fracture of the skull, caused by his head having been crushed between a cart-wheel and a lamp-post.	*	In London Hospital, coal-dealer, F. 63, cut her throat with a razor (temporary insanity) 2 days		Perfumer, 33, hanged himself in a temporary state of insanity.	
In University College Hospital, a cabinet-maker, 46, injuries of the head, done in the street, probably from being knocked down by a cabriolet.	16 hours	In London Hospital, a general dealer, M. 23, accidental from a fall causing a wound in his head and erysipelas	12 days	M. about 45 years, hanged himself, being of unsound mind.	
In London Hospital, carman, 22, accidentally run over by a cart drawn by one horse.	*	In London Hospital, labourer, 25, accidentally caused by a wound from an axe	1 month	M. 4 months, suffocated in bed whilst lying between his father and mother—found dead.	
In London Hospital, carman, 35, accidental by a fall from a wagon on his head	same day	Drowning:—		M. 47, suicide by hanging himself with a cord to a bed-post, being of unsound mind, arising from habits of intemperance.	*
In London Hospital, M. 13, run over by a coal wagon, how caused no evidence to show.	*	Daughter of a boatman, 9, drowned in the Grand Junction Canal, not known how she fell into the water.		Wife of a sweep, 48, suicide by hanging herself to the rail of a bedstead with a night gown, the sleeves tied about the neck, in a state of temporary delirium, resulting upon intoxication.	
In London Hospital, carman, 25, accidental from a fractured spine, caused by a fall from a cart	4 days	Hackney cab-driver, 35, drowned—no evidence adduced as to how, when, or where he was drowned.		Barns and Scalds:—	
In University College Hospital, a railway plate layer, 20, gangrene of the legs, from being crushed by an accidental collision of a railway steam-engine and a goods truck, at Wolverton, from want of caution on the part of the deceased	lived 1 week	A rigger, 35, accidentally drowned by falling from a stage, on a vessel, into the London Docks.		In Loudon Hospital, labourer's son, 6, accidental from clothes taking fire	2 days

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Childbirth (continued):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		POPLAR; Poplar.		F. 35, childbirth—uterine phlebitis	*
CHELSEA; South.		M. 5 weeks, variola (not vaccinated)	*	F. 29, puerperal fever	*
M. 1, variola	10 days	LAMBETH; Waterloo (first part).		Delirium Tremens:—	
F. 1, variola confuens	13 days	M. 1 month, variola	2 days	M. 32, delirium tremens	*
— North East.		— Waterloo (second part).		In King's College Hospital, bell-hanger, 36, delirium tremens	*
M. 7, small pox	3 weeks	M. 1, small pox (not vaccinated)	*	bronchitis	*
F. 7 weeks, variola confuens	9 days	M. 2, small pox	*	M. 43, delirium tremens, accompanied with epileptic fits, and inflammation of the membranes of the brain	3 months
— after previous vaccination.		vaccinated at 3 months old with effect.		M. 46, delirium tremens—convulsions	3 days
WESTMINSTER; St. John the Evangelist.		GREENWICH; St. Nicholas, Deptford.		In London Hospital, drayman, 24 (inquest), delirium tremens, brought on partly by intemperance and partly by a contusion of the head—how caused unknown	24 hours
M. 4 months, variola confuens	9 days	F. 2, small pox	*	Intemperance:—	
pneumonia	3 days	— Woolwich Dock Yard.		In King's College Hospital, M. 40, inflammation of capsule of Glisson (from drink).	10 days
F. 3, variola	16 days	M. 21, small pox (not vaccinated)	*	Privation; Want of Breast-milk; Inanition, &c:—	
pneumonia	2 days	— Greenwich West.		F. 5 months, marasmus, without breast-milk, convulsions	12 hours
F. 8 months, small pox	8 days	F. 2, small pox (not vaccinated)	10 days	Purpura:—	
vaccination attempted without effect one week before the small pox appeared.		Syphilis:—		No deaths returned under this head in the week.	
Without medical aid.		M. 2 days (post mort.), syphilitic—congenital cachexia.	*	Hæmorrhage, Hæmatemesis, &c:—	
— St. Margaret.		Malformation:—		F. 38, hæmatemesis	16 days
F. 2, small pox, natural	15 days	M. 4 hours, imperfect respiration.		M. 60, hæmorrhage from stomach, of 10 days' duration, the consequence of disease of liver	of long standing
pneumonia (not vaccinated)	2 days	Hernia:—		M. 53, hæmatemesis	8½ months
F. 17, variola (not vaccinated).	*	No deaths returned under this head in the week.		bronchitis—hæmoptysis	8 months
M. under 1 year, small pox (not vaccinated).	*	Diabetes:—		NOTE.—Upon enquiry, the case which occurred in the note of last week's bill (No. 35), of "hæmorrhage from the uterus, F. 27," was ascertained to be accompanied with fungoid disease (cancer).	
F. 3, small pox, natural	9 days	No deaths returned under this head in the week.		Hæmorrhage and Consumption:—	
pneumonia	2 days	Stone:—		M. 36, phthisis pulmonalis	*
not vaccinated.		No deaths returned under this head in the week.		rupture of a blood-vessel.	4 months
MARYLEBONE; Christ Church.		Childbirth:—		Miscellaneous Cases:—	
M. 6, variola (not vaccinated).	7 days	The time elapsing from commencement of labour to death should invariably be returned.		M. 38 (post mort.), diseased heart	many years
St. PANCRAAS; Tottenham.		F. 31, childbirth.	70 hours	epilepsy	2½ years
M. 2 months, small pox	1 week	uterine hæmorrhage	1 hour	albuminuria	*
— Somers Town.		atony of uterus.		The Registrar reports, "that the deceased, a painter, was seized, while at work, in a fit, during the storm on Thursday last (Aug. 31st), and lived 14 hours after.	
M. 2, variola (not vaccinated)	14 days	F. 23, diseased heart	*	M. 39 (post mort.), gall stones—small ulcerations—escape of bile into peritoncum—collapse-peritonitis	2 days
— Camden Town.		puerperal fever.	*	M. 2, eczema (with fever after vaccination)	9 days
In the Small Pox Hospital the following six deaths are reported:—		F. 34 (post mort.), puerperal convulsions	*	In Dreadnought Hospital, M. 38 (post mort.), dysentery	12 months
M. 23, small pox, confluent (unprotected).	12 days	chronic inflammation of the membrane of the brain—4 ounces of water between the membrane and the base of the brain.	*	aggravated after eating fruit	7 days
M. 25, small pox, confluent (unprotected).	9 days	F. 29, puerperal peritonitis	*	inflammation of stomach, and universal ulceration of large intestines.	
F. 8, small pox, confluent (unprotected).	7 days	3 days after delivery.		M. 92, ruptured bladder from retention of urine, 8 days	
F. 23, small pox, confluent (unmodified)	10 days	F. 27, twenty-six hours after confinement, supposed from some organic disease.		NOTE.—The following cases which occur in the returns, are for the sake of convenience classed in the list of diseases, thus:—M. 38, 25, & 26, hæmoptysis, are referred to the same head as phthisis; M. 32, F. 8, hydrothorax to dropsy; M. 33, constipation to ileus; F. 69, tumour to cancer; F. 70, psoas abscess to scrofula; F. 32, angina pectoris to disease of heart; F. 37, necrosis to disease of joints, &c.	
said to have been vaccinated when young at Huntingdon—no cicatrix.		F. 30, puerperal mania	*		
M. 22, small pox, confluent (unprotected).	10 days	puerperal fever.	2 weeks		
M. 13, small pox, confluent (unprotected).	11 days	F. 28, childbirth	7 days		
CLERKENWELL; Amwell.		phlebitis	5 days		
M. 4, variola—Bright's kidney.	6 weeks	F. 23, placenta prævia, with profuse hæmorrhage, 4 days death 3 hours after delivery from atony of uterus.	9 days		
St. LUKE; Whitecross-street.		F. 28, childbirth.	9 days		
M. 3, small pox (not vaccinated).	*	puerperal fever.	2 days		
M. 10, variola (not vaccinated).	3 weeks	F. 32, apoplexy 3 days after childbirth.			
F. 1, small pox (not vaccinated).	14 days	F. 45, tubercles of the uterus	15 years		
St. GEORGE IN THE EAST; St. John.		phlegmasia dolens	5 weeks		
F. 9 months, diarrhœa	6 days				
small pox	2 days				
vaccination attempted 4 months ago without success. This case was referred to diarrhœa in abstract.					

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 5; disease of heart, 3; erysipelas, 2; consumption, 3; peritonitis, 3; convulsions, 1; asthma, 1; cholera, 1; bronchitis, 1; diarrhœa, 1; delirium tremens, 1; violence, 48; other specified causes, 8; &c., 8.—Total, 86 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 38.

Cases of CHOLERA returned in the Week ending Sept. 9th.—(All except one are certified by Medical Attendant.)

In Kensington Town (sub-district) girl, 2 months, "repeated attacks of cholera from birth."	In St. John, St. Olaves, M. 85 years, "cholera (11 days' duration), exhaustion, (3 days)."
In Saffron-hill, F. 33 years, "cholera—exhaustion (5 days' duration)."	In London-road, St. George, Southwark, girl, 3 months, "cholera."
In Hackney-road, Bethnal-green, girl, 1 year "English cholera (7 weeks' duration)."	In Trinity, Newington, girl, 8 weeks, inquest, "natural death—English cholera, (6 days' duration)."
In Shadwell and Wapping, Stepney, a girl, 3 months, "cholera infantum (7 days' duration)."	

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 9th September, 1848.

Day. — 1848	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension strong at each examination.	The sky was cloudless throughout the day; haze was prevalent morning and evening.
MON.	Positive and tension strong at 9h. a.m. and at noon. Nothing was shewn afterwards.	The sky was cloudless throughout the day; a thin fog prevailed during the early part of the morning.
TUES.	Positive and tension moderate from noon till 6h. p.m. Nothing was shewn at any other time.	The sky was cloudless till noon, one-half covered till 4h. p.m., and overcast afterwards; cumuli, cirrostrati and scud. A slight shower of rain fell at 6h. 15m. p.m. Several flashes of lightning were seen during the evening.
WED.	Nothing was shewn till noon. Positive and tension moderate during the remainder of the day.	Three-fourths of the sky were covered till 4h. p.m. and cloudless afterwards; cumuli, cirrostrati and scud. Rain was falling at intervals during the early part of the morning.
THURS.	Positive and tension moderate at 6h. p.m. Nothing was shewn at any other time.	A small amount of cloud prevailed till 7h. p.m. and the sky was overcast during the remainder of the day; cirrostratus and scud.
FRI.	Positive and tension weak at 6h. a.m. Nothing was shewn during the remainder of the day.	The sky was overcast till 11h. p.m. and generally about one-half covered afterwards; cirrostratus and scud.
SAT.	Nothing was shewn throughout the day.	One-third portion of the sky was covered till 7h. a.m., the sky was overcast from this time till 3h. p.m.; generally clear till 6h. p.m., and overcast afterwards; cirrostratus, fleecy clouds and scud.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Galsner, from five years' observations ending December 31, 1845.—See *Phil. Trans. Part 1*, 1846.

The readings of the two self-registering thermometers, the one placed in the *ful rays of the sun*, and the other placed on *grass* fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that of which the thermometers are read.

Sep. 7. The anemometer was replaced after having been repaired.

The average temperature of the air is that determined by Mr. Galsner from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans. Part 1*, 1848.

* In reading the 10th column, it will be borne in mind that + is read "higher;" and — "lower;" than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 55.9; and the mean reading at 6h. p.m. was 65.9; the mean readings at the Royal Observatory for the same times were 54.5 and 63.4 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, September 16th, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 37.]

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 36.

(The tabular abstract on the first page is for the week ending Saturday, Sept. 16th. The following selection of cases is made from the Returns for the week ending Sept. 9th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italica at the end of an entry show the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Drowning (continued):—	duration
Wife of a clergyman, 84, an injury of the spine from accidentally falling down stairs in the dark	4 days	A cabinet-maker, 23, accidental discharge of a fowling piece into his chest from a defect in the lock, which was shaken down upon the percussion cap, by a fall on the butt-end	3 hour	A labourer, 18, found dead in the River Thames without marks of violence—apparently drowned.	
Son of a labourer, 6, accidental injury to his head, caused by the falling upon it of a piece of wood.....	*	Drowning:—		M. 2, accidentally drowned by falling into a well of water.....	about 1½ hour
M. 11 months, accidental death from a fall out of bed	1 day	Waterman in a river steam-packet, 23, drowning, was tilted over-board by the wheel at the helm—acted suddenly on by the water whilst steering	*	Hanging, &c:—	
A fireman, 26, accidentally killed at a fire, by the falling in of the upper floors of a mill	*	M. 10, accidentally drowned while bathing in the waters of a tank	*	Shoemaker, 72, hanging, not known if insane or a suicide.	
Also a fireman, aged 26, accidentally killed at a fire, by the falling in of the upper floors of a mill.....	*	Mariner, 24, found dead; apparently drowned in the London Docks.		Shoemaker, 33, hanging himself by a cord to a nail in the wall (temporary insanity)—found dead some hours after.	
				A seaman, 33, hanged himself in a temporary state of insanity.	

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued):—

Burns and Scalds:—	duration	Poison:—	duration	Other Violence (continued):—	duration
In Westminster Hospital, son of a cutler, 1, scald of the chest and back, by the boiling water from a kettle, which was thrown from the fire, by the pocket-hole of the coat of his father catching the spout.....	20 hours	Butcher, 73, accidentally taking an over-dose of laudanum.....	12 hours	F. 39 (no inquest), exhaustion from abscess and refusal of food.....	*
		Other Violence:—		M. 30 minutes, strangled at birth, from the want of proper surgical attendance (not certified).	
		F. 14, an explosion of coal-gas at a house, where the gas had escaped into a shop, by what means unknown.			

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Privation; Want of Breast-milk; Inanition, &c:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.					
KENSINGTON; St. John, Paddington.					
F. 1, small pox (not vaccinated)	*	ST. LUKE; Finsbury.		M. 3 weeks, inanition from want of breast-milk	*
F. 1, scarlatina, after variola	7 days	F. 4, small pox (after vaccination)	*	F. 13 days, convulsions	24 hours
(not vaccinated.)		WEST LONDON; South.		want of breast-milk	*
— Fulham.		M. 1, small pox	6 days	M. 11 weeks, inanition	*
F. 5, confluent small pox	8 days	ST. GEORGE, SOUTHWARK; Kent Road.		Purpura:—	
F. 1, confluent small pox	8 days	F. 7, small pox (not vaccinated)	*	M. 1 (post mort.), purpura	4 days
— St. Paul's, Hammersmith.		ST. MARY, NEWINGTON; Trinity.		effusion of blood on the brain	*
M. 15 months, small pox	14 days	M. 1, variella	2 days	Purpura and Fever:—	
(not vaccinated.)		bronchitis	26 hours	M. 9, fever—purpura	*
CHELSEA; South.		convulsions	6 hours	Purpura and Consumption:—	
M. 1, small pox (not vaccinated)	11 days	F. 4, natural small pox	2 weeks	M. 21, phthisis	15 months
M. 6, variola confluent	1 week	LAMBETH; Waterloo (first part).		scurvy	3 months
(vaccinated 10 days previous to his illness.)		M. 2, variola	5 days	Hæmorrhage, Hæmatemesis, &c:—	
— North East.		— Waterloo (second part).		F. 44, hæmatemesis	3 days
M. 5 weeks, small pox (not vaccinated)	*	M. 5 months, variola	5 days	Hæmatemesis and Consumption:—	
F. 7 weeks, variola confluent	9 days	Syphilis:—		M. 34, phthisis—hæmoptysis—hæmatemesis, 2 years	
(after previous vaccination.)		No deaths returned under this head in the week.		Hæmorrhage and Cancer:—	
F. 2, small pox	10 days	Malformation:—		M. 63, cancer axilla	*
St. GEORGE, Hanover-square; Belgrave.		F. 6 days, imperfect organization of liver, &c.	*	hæmorrhage	*
M. 3 months, small pox (not vaccinated)	3 weeks	M. 2 days, morbus cereuleus—convulsions from open foramen ovale	*	Miscellaneous Cases:—	
M. 2 months, confluent small pox	14 days	F. 1 month, cyanosis	*	M. 57, emphysema	many years
(not vaccinated.)		F. 24, malformation of the heart	*	anasarca—hydrothorax	21 days
F. 3, variola confluent	19 days	F. 1, imperforate anus (partial)	from birth	In Westminster Hospital, daughter of a labourer, 8 (inquest, post mort.), natural, from inflammation of the intestines, caused by continued fever	5 hours
(not vaccinated.)		Inflammation of the mucous coat of the bowels	*	F. 55, laryngitis	8 days
WESTMINSTER; St. John the Evangelist.		In Guy's Hospital, F. 24, imperfect aortic valves—pulmonary apoplexy—anasarca ..	*	Mr. James Leonard, the Registrar of Charing Cross district, reports, "that tracheotomy was performed in this case 3 hours before total suffocation, but with no relief."	
F. 2 months, variola (not vaccinated)	2 weeks	Hernia:—		M. 6 months, psoriasis (inveterate)	4 months
F. 8 months, variola (not vaccinated)	14 days	In University College Hospital, F. 70 (post mort.), strangulated femoral hernia	*	In University College Hospital, M. 61 (p.m.), open cancer of stomach, hepatized disease of liver, ascites, anasarca	*
F. 9, diseased hip-joint	3 years	operation	9 hours	In University College Hospital, F. 16 (p.m.), elongated cervix uteri	*
variola	3 weeks	M. 71, hernia—natural decay	*	excision—peritonitis	46 hours
(vaccinated when an infant with effect.)		M. 53, strangulated hernia—operation upon—died 40 hours after.	*	F. 18 months, mumps—bronchitis	5 days
F. 3 months, variola	2 weeks	Diabetes:—		M. 57, ramollissement of the brain	7 weeks
— St. Margaret.		M. 25, diabetes	*	M. 14 months, membranous inflammation of the head	13 days
M. 4, variola (not vaccinated)	18 days	Stone:—		vomiting, coma, and effusion	3 days
M. under 1 year, variola (not vaccinated)	*	M. 56, gravel	*	In Guy's Hospital, M. 52 (post mort.), stricture of the urethra	13 years
F. 10, variola	2 weeks	Childbirth:—		suppuration of kidneys—old cystitis	*
(vaccinated when 12 months old without effect.)		The time elapsing from commencement of labour to death should invariably be returned.		In Guy's Hospital, F. 29, psoas abscess	4 months
F. 1, small pox (not vaccinated)	*	F. 40, puerperal peritonitis	3 days	M. 7, mesenteric disease	1 year
F. 5, small pox—debility	*	In the Lying-in Hospital, F. 34, childbirth	5 days	remittent fever	2 weeks
MARYLEBONE; St. Mary.		peritonitis	4 days	In Dreadnought Hospital, M. 14 (post mort.), sloughing abscess of neck, pleuro-pneumonia	3 weeks
M. 3, retrocedent small pox	*	F. 30, childbirth	5 days	red solidification of right lung with pleuritic adhesions, extensive effusion of serum, and deposition of lymph in left pleura.	
(vaccinated 2½ years ago with effect.)		puerperal fever—acute peritonitis—hronchitis chronic	*	NOTE.—Not to extend the list of diseases to too great a length, a M. aged 60, hydropicærdium, M. 6 & F. 4, hydrothorax, are each referred in the abstract to the same head as dropsy: F. 10 & 29, psoas abscess to scrofula; M. 20, 3, 22, 20, 17, F. 55 & 40, hæmoptysis to phthisis; M. 55, F. 7, 72, 52, & 62, necrencephalus to disease of brain, &c.; M. 8, carditis to pericarditis; M. 45, angina pectoris to disease of heart; M. 7 weeks, laryngismus stridulus to laryngitis; M. 1, eczema, M. 2, impetigo, and M. 6 months, psoriasis, to disease of skin, &c.; F. 18 months, mumps to scarlatina, &c.	
F. 11 months, small pox (not vaccinated)	7 days	F. 32, childbirth	6 hours		
— Christ Church.		hæmorrhage from the womb	*		
F. 2, small pox (not vaccinated)	2 weeks	F. 45, parturition—uterine phlebitis	4 days		
St. PANCRAS; Camden Town.		F. 36, parturition—rupture of uterus	48 hours		
In the Small Pox Hospital, the following five deaths are reported:—		F. 29, severe labour—hæmorrhage	1 day		
F. 11, small pox confluent (unprotected)	27 days	F. 43, placenta prævia—anaemia	*		
F. 21, small pox confluent (unmodified)	23 days	F. 36, milk fever after parturition, combined with rheumatism	10 days		
(vaccinated when young at Cobham—one good cicatrix.)		Delirium Tremens:—			
M. 29, small pox confluent (unmodified)	14 days	M. 50, delirium tremens	4 days		
said to have been vaccinated when young at Wargrave, Berkshire—no cicatrix.		Intemperance:—			
F. 22, small pox confluent (unprotected)	11 days	F. 45, intemperance	— years		
F. 17, small pox confluent (unmodified)	*	apoplexy	*		
(vaccinated in the Borough in early infancy—one good cicatrix.)					
HOLBORN; St. Andrew, Western.					
F. 2, small pox (not vaccinated)	17 days				
laryngitis	1 day				

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 3; disease of heart, 1; convulsions, 1; epilepsy, 1; diseased lungs, 1; violence, 18; other specified causes, 2; "found dead," "natural death," "visitation of God," &c., 1.—TOTAL, 28 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 32.

For the week ending September the 9th, there were 21 deaths registered in the St. Marylebone Workhouse; 14 of which were ascribed to diarrhoea and dysentery. The Registrar, Mr. E. Joseph, makes the following statement of the facts: "Respecting the cases of dysentery and diarrhoea in St. Marylebone Workhouse, I beg to state, that I have made enquiries thereupon, and find that dysentery has been almost an epidemic in that establishment for the last six weeks or two months—that the cases reported in last week's return had been ill about eight days previously—that the aged inmates had been principally the subjects of these attacks—and that there are now about a dozen cases under treatment of which some deaths will probably have to be reported in the present week's return. I find from the Medical Attendant, that the disease has been singularly intractable, almost every plan of treatment proving alike inefficacious."

14 deaths are reported in the above workhouse for the week ending September the 16th; 7 of which are ascribed to diarrhoea and dysentery.

Cases of CHOLERA returned in the Week ending Sept. 16th.—(All are certified by Medical Attendant.)

In the Rectory (sub-district) Marylebone, girl 9 months, "cholera infantum (15 hours' duration)."	In St. Anne, Westminster, girl 6 months, "bronchitis following English cholera (14 days' duration)."
In the Regent's Park (sub-district) St. Pancras, F. 40 years, "mixed form of cholera (21 days' duration); typhus fever."	In Saffron-hill (sub-district), Holborn, M. 24 years, "phthisis-pneumonia (5 days' duration); cholera (duration not stated)."
In St. Mary, Strand, girl 1 year and 10 months, "cholera (5 days' duration)."	In Greenwich, West, M. 55 years "Asiatic cholera, (36 hours' duration)."

DEATHS registered in LONDON, in series of weeks of nine years:—

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn at any examination.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling at intervals during the evening.
MON.	Nothing was shewn throughout the day.	The sky was generally cloudless till 1h. p.m., overcast from this time till 8h. p.m., and one-half covered afterwards; cirrostratus and scud. A lunar halo of 23° radius was visible during the evening.
TUES.	Positive, and tension variable between noon and 6h. p.m. Nothing was shewn at any other time.	One-third portion of the sky was covered till 7h. a.m., generally overcast till 3h. p.m., and one-third part covered afterwards; cirrostratus, fleecy clouds, and scud.
WED.	Nothing was shewn till 9h. a.m. Positive, and tension variable during the remainder of the day.	The sky was cloudless till noon; the amount of cloud that prevailed from this time till 4h. p.m. was variable, and overcast afterwards; cirrostratus, fleecy clouds, and haze.
THURS.	Positive, and tension strong at 6h. a.m., and at 9h. a.m. Nothing was shewn at any other time.	The sky was overcast till noon, and the clouds were variable in amount during the remainder of the day; cirrostratus, fleecy clouds, and scud. At 9h. 30m. p.m. a lunar halo was visible of 23° radius, finely colored.
FRID.	Nothing was shewn till near noon. Positive, and tension strong during the remainder of the day.	A few light clouds were occasionally visible, otherwise the sky was generally clear throughout the day.
SAT.	Positive, and tension strong from about noon to 6h. p.m. Nothing was shewn at other times.	The sky was cloudless throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the visible sky covered with cloud. The observations were taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans. Part 1*, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that in which the thermometers are read.

At the beginning of the week the maximum thermometer was broken.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans. Part 1*, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower;" than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 43°3; and the mean reading at 6h. p.m. was 57°1; the mean readings at the Royal Observatory for the same times were 40°9 and 54°2 respectively.

During the Week ending Saturday, September 23d, 1848.

Cases of CHOLERA returned in the Week ending Sept. 23d.

In Stamford-hill (sub-district), Hackney, a boy, 4 years, "cholera (26 hours' duration)."	In Amwell, Clerkenwell, a boy, 1 year, "cholera."
In St. Clement Dances, Strand, M. 61 years, "cholera morbus (5 or 6 days' duration)."	In St. Leonard's (sub-district) Shoreditch, M. 4 months, "English cholera (3 days' duration)."
In St. Anne, Westminster, F. 29 years, "diarrhoea (7 days' duration): English cholera (12 hours)."	In Bow and Bromley, Poplar, M. (age not stated), "natural death, English cholera."
	In St. John (sub-district), St. Olave's, M. 52 years, "Asiatic cholera (11½ hours' duration)."

* The Registrar has omitted to state whether this case was certified by Medical Attendant. All others cases are reported to have been certified.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 37.

(The tabular abstract on the first page is for the week ending Saturday, Sept. 23rd. The following selection of cases is made from the Returns for the week ending Sept. 16th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging and Suffocation:—	
In Middlesex Hospital, carman, 50, fractured skull and ribs, caused by an accidental fall from the tail of a waggon	*	F. 2, injuries to her head, caused by an accidental fall into an area	*	M. 53, accidentally suffocated by the fumes arising from a fire in a ship	*
In Middlesex Hospital, coachman, 53, fingers accidentally crushed by a carriage wheel; followed in 14 days by locked jaw	*	A clerk, 52, fell into a pit and fractured his skull, in Bishopsgate-street	6 hours	Burns and Scalds:—	
In Middlesex Hospital, son of a labourer, 1, head accidentally crushed by the wheel of a cart	*	In St. Bartholomew's Hospital, waterer and embosser, about 59, the effects of a compound fracture of his right leg, from slipping down in Upper Whitecross-street	*	Daughter of a painter and paper-hanger, 15 months, scald of the breast from upsetting a basin of hot water placed on a table	*
In St. Bartholomew's Hospital, a gas-fitter, about 60 (<i>post mort.</i>), peritonitis, brought on by a compound fracture of his left leg, from being run over by a cart in Finsbury-square—leg amputated	1 month	In St. Bartholomew's Hospital, a labourer, about 43 (<i>post mort.</i>), bruises on his right leg, by a log of timber falling against it, at the City Basin, City-road	12 days	In St. Bartholomew's Hospital, son of a paper-stainer, 6, scalds by the upsetting of a tea-kettle of boiling water, at Clerkenwell	16 days
In St. Bartholomew's Hospital, porter, 66, fracture of his left thigh, by falling down whilst getting out of a cart at Hoxton	6 weeks	mortification	4 days	In St. Bartholomew's Hospital, daughter of a gold swivel-maker, 3, burnt by her clothes taking fire, whilst standing by the fire, at Lower Smith-street, Clerkenwell	11 days
M. 16, accidentally killed by a fall from a horse, and the horse rolling over him	4 hours	Drowning:—		M. 1, scalds by the upsetting of a saucepan, caused by the mother's endeavour to save her child from falling into the fire	27 hours
M. 2, accidental death, by a fall from a truck	*	M. 33, found dead, apparently drowned in a keep of raisin wine	*	Poison:—	
Seaman, 23, accidental death by a fall from the main-top-sail yard of a ship	*	F. 5, drowning—wilful murder by her mother, Ann Trenham	*	M. apparently 22 years, laudanum; whether a suicide not known; found dead in bed.	
M. 78, accidental death from a fall down stairs, injuring his ribs, causing pleurisy	4 days	Master of the "William Hardman," of Sunderland, 48, drowned by falling accidentally in the Commercial Dock, at Rotherhithe	7 hours	M. 27, poisoned himself in a temporary state of insanity	*
M. 45, concussion of the brain, caused by a rope breaking and striking him over the left eye, whilst hauling a ship into the London Docks	1 week	Son of a journeyman cooper, 2, accidentally drowned by falling into a mill-stream, at Rotherhithe	*	The nature of the poison should invariably be stated.	
		Apprenticed seaman, 13, accidental death, killed by falling off the main-top gallant-yard of the bark "Pollock," in the Commercial Dock, Rotherhithe	30 mins.	Other Violence:—	
		Query.—Was he drowned or killed by the fall?		A tailor, 34, rupture of the urinary bladder in the street while intoxicated, whether from accident or wilful violence unknown	3 days

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HÆMORRHIAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Delirium Tremens:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		ST. GEORGE IN THE EAST; St. Mary.		M. 33, delirium tremens	4 days
KENSINGTON; St. John, Paddington.		M. 2, small pox	*	Erysipelas and Delirium Tremens:—	
M. 3, small pox (vaccinated)	9 days	(vaccinated when 2 months old with partial effect.)		In Charing Cross Hospital, M. 33, erysipelas and delirium tremens	14 days
CHELSEA; South.		STEPNEY; Mile End, Old Town (Upper).		Intemperance:—	
F. 3, small pox (not vaccinated)	13 days	F. 5, variola confluent	*	No deaths returned under this head in the week.	
— North-West.		— Mile End Old Town (Lower).		Privation; Want of Breast-milk; Inanition, &c:—	
M. 33, small pox (not vaccinated)	8 days	M. 8, small pox (not vaccinated)	12 days	M. 12 days, prematurely born, want of breast-milk.	
F. 4 (inquest), natural small pox	*	M. 3, variola (not vaccinated)	14 days	F. 24 hours, manslaughter against some person or persons unknown—through desertion and neglect.	
Without being visited by the Workhouse Relieving Officer when necessary.		POPULAR; Poplar.		Purpura:—	
ST. GEORGE, HANOVER SQUARE; Belgrave.		M. 3 weeks, small pox (not vaccinated)	2 weeks	No deaths returned under this head in the week.	
M. 5, confluent small pox	9 days	ST. SAVIOUR; St. Saviour.		Hæmorrhage, Hæmatemesis, &c:—	
(not vaccinated.)		M. 6 months, small pox (not vaccinated)	9 days	F. 49, uterine hæmorrhage	2½ years
M. 6, confluent small pox	8 days	(no medical attendant.)		exhaustion from vomiting	1 month
(not vaccinated.)		BERMONDSEY; St. James.		Carman, 41 (inquest), hæmorrhage from the lungs	1 minute
Mr. Jorden, the Registrar, states, "that the above two cases occurred in the same family, the members of which, from prejudice, were not vaccinated."		F. 13 months, small pox, natural	11 days	Consumption and Hæmorrhage:—	
WESTMINSTER; St. John the Evangelist.		LAMBETH; Waterloo (first part).		M. 48, consumption—hæmorrhage from the lungs	1 hour
M. 6, variola confluent	14 days	F. 3, small pox (not vaccinated)	14 days	Fever and Hæmatemesis:—	
(not vaccinated)		— Waterloo (second part.)		M. 50, fever	17 days
F. 24, variola confluent (unprotected)	*	F. 2, small pox	1 week	hæmorrhage from the bowels	6 days
F. 1, variola—dénitition—convulsions	4 days	CAMBERWELL; Peckham.		Miscellaneous Cases:—	
(vaccination doubtful.)		M. 8 months, small pox	1 month	M. 1, inflammation of the lungs	3 months
— St. Margaret.		(without previous vaccination.)		ulceration on the chest after a blister.	
M. 2, variola (not vaccinated)	*	diarrhœa—exhaustion	2 weeks	F. 14 (post mort.), softening of brain	3 months
F. 2, variola confluent (natural)	*	GREENWICH; East.		F. 50, neuralgia	10 months
(not vaccinated.)		F. 3, small pox (not vaccinated)	*	hypochondriasis	4 months
MARYLEBONE; Cavendish-square.		(no medical attendant.)		monomania	3 weeks
M. 4, retrocedent small pox	13 days	Syphilis:—		debility	*
(not vaccinated.)		M. 13 weeks, syphilitic disease over the whole body	10 weeks	F. 71, neuralgia—exhaustion	4 months
F. 7 months, confluent small pox	9 days	Malformations:—		In Dreadnought Hospital, M. 57 (post mort.), dilatation of heart	12 months
(not vaccinated.)		F. 7 weeks, malformation.		general dropsy	4 months
— The Rectory.		F. 5 weeks, spina bifida	from birth	pulmonary apoplexy	2 days
M. 3, small pox	12 days	Hernia:—		In Dreadnought Hospital, M. 14 (post mort.), fever	of uncertain date
(not vaccinated.)		M. 33 (post mort.), internal hernia	4 days	phrenitis	7 days
F. 1, small pox	3 days	mortification	1 day	obstinate vomiting and constipation, inflammation and softening of brain, with effusion—knotting of ilium, with great congestion.	
(not vaccinated.)		Diabetes:—		In Dreadnought Hospital, M. 42 (post mort.), pleuro-pneumonia of left side—grey hepatization of nearly the whole lung, and effusion of lymph on the pleura.	
— Christ Church.		No deaths returned under this head in the week.		M. 6, scarlatina maligna	3 days
M. 6, small pox, semi-confluent, natural	6 days	Stone:—		M. 2, scarlatina maligna	4 days
ST. PANCRAS; Gray's Inn-lane.		M. 60, disease of the bladder and kidneys, with calculus in the bladder	*	F. 5, scarlatina maligna	4 days
F. 3, small pox	12 days	Childbirth:—		In St. Mary (sub-district), Paddington, the Registrar, Mr. James Pursey, reports, "that the above 3 cases of scarlatina occurred in one family—the children of a tailor; the deaths took place in the house, No. 9, Margaret-terrace, Paddington-green. The disease was of a slight character at first, but was greatly accelerated by effluvia from imperfect or improper drainage; the remaining members of the family have since left the house."	
vaccination attempted one year ago without success.		The time elapsing from commencement of labour to death should invariably be returned.		NOTE.—Not to extend the list of diseases to too great a length, 4 Males aged 62, 62, 3, 72, & F. 3, hydrothorax are referred in the abstract to the same head as dropsy; M. 52, F. 56, & 2, tumour to cancer; M. 24, psoas abscess to scrofula; M. 22, 35, F. 43, 49, 44, 54, & 40, hæmoptysis to phthisis; F. 50 & 71, neuralgia, and F. 14, 50, & 7, necrocerephalus to disease of brain, &c.; F. 6 months, laryngismus stridulus to laryngitis; M. 60, cirrhosis to disease of liver; M. 83, prostatic disease to disease of kidneys, &c.	
— Camden Town.		F. 30 (inquest), exhaustion consequent on protracted parturition—natural	*	euteritis, 1; hæmorrhage, 1; gout, 1; violence, 27;	
In the Small Pox Hospital, the following four deaths are reported:—		F. 19, puerperal fever	*		
M. 9 months, small pox confluent (unprotected) 8 days		F. 37, fever after premature confinement, ending in typhus	10 days		
F. 26, small pox confluent (unmodified)	15 days	F. 29, exhaustion after painful parturition	1 day		
said to have been vaccinated at Stanwell, near Staines—no cicatrix.		F. 34, hæmorrhage 8 days after delivery.			
F. 21, small pox confluent (unprotected)	4 days	(under shoulder presentation.)			
M. 23, small pox confluent (unprotected)	17 days	F. 37, peritonitis	4 days		
hospital erythema and glossitis.		puerperal fever 5 days after delivery.			
HACKNEY; West.		F. 23, puerperal fever	8 days		
M. 6, confluent small pox	14 days	F. 23, febris—childbirth—phlebitis	30 hours		
(not vaccinated.)		F. 41, hæmorrhage after labour	1½ hour		
STRAND; St. Mary.		F. 27, childbirth	9 days		
F. 3, variola	*	F. 21, apoplexy produced by the rupture of a vessel (the longitudinal sinus) within the brain, 2 hours after delivery of a living male child.			
ST. LUKE; Finsbury.		F. 32, chronic arachnitis	3 years		
M. 2, pneumonia after variola	5 days	abortion	26 days		
— Whitecross-street.		This case in the abstract was referred to cephalitis.			
M. 2, confluent small pox, with petechiæ	9 days				
(not vaccinated.)					

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Disease of heart, 2; apoplexy, 2; small pox, 1; other specified causes, 4; "found dead," "natural death," "visitation of God," &c., 4.—TOTAL, 43 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 39.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 23d September, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations (corrected for altitude to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature				Wind as deduced from Osler's Anemometer.				Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0-10	Rain in inches, read at midnight
			Dry			Dew Point	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean from 6 Diff.		Greatest	Least	General Direction		Pressure in lbs. oo the square foot								
			High- est	Low- est	Mean from 6 Obs. Corr.	Mean from 6 Rits. Corr.	Highest in the sun, as shown by a self-register- ing thermometer, read at midnight	Lowest on the grass, as shown by a self-register- ing Thermometer read at midnight	Highest	Lowest			A.M.	P.M.	Greatest	Least	Mean of 24 Obs.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was cloudless throughout the day; haze was very prevalent.
MON.	Nothing was shewn throughout the day.	The sky was obscured with thin clouds till 7h. a.m., and generally clear from this time till noon. From noon till 7h. p.m. about one-half of the sky was covered and cloudless afterwards: cumuli, fleecy clouds, and haze.
TUES.	Nothing was shewn throughout the day.	Three-fourths of the sky were covered till 4h. p.m., and cloudless afterwards: cumulostrati, fleecy clouds and haze.
WED.	Nothing was shewn throughout the day.	The sky was generally cloudless throughout the day.
THURS.	Negative and very active at 6h p.m. Nothing was shewn at any other examination.	The sky was cloudless till 5h. 30m. a.m., covered with clouds till 8h. a.m., and variable in amount during the remainder of the day; cirrostratus, scud, and fleecy clouds.
FRID.	Positive, and tension moderate between 4h. and 8h. p.m. Nothing was shewn at any other times.	The sky was cloudless till 7h. a.m., and from 6h. p.m. till midnight; between these times clouds prevailed, but variable in amount: cirrostratus, scud, and haze. Many flashes of lightning were seen during the evening and night, chiefly in the s.w.
SAT.	Nothing was shewn throughout the day.	Three-fourths of the sky were covered till 6h. a.m., and generally overcast during the remainder of the day; cirrostratus and scud. Heavy rain was falling from noon to 0h. 50m. p.m., and between 10h. 10m. p.m. and 11h. 0m. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See Phil. Trans. Part 1, 1846.
The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.
The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See Phil. Trans. Part 1, 1848.
* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.
The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 48°3; and the mean reading at 6h. p.m. was 61°3; the mean readings at the Royal Observatory for the same times were 46°9 and 58°9 respectively.
The maximum thermometer for determining the temperature of the Thames water was away during the week for repair.
Erratum in the report of last week.—In the notes, for maximum thermometer was brokeo, read maximum thermometer used for determining the temperature of the Thames water.

Births and Deaths registered in London,

During the Week ending Saturday, September 30th, 1848.

* The ages of two persons, whose deaths are ascribed respectively to *fractures* and *drowning*, are not stated.

Note.—The present return exhibits a great increase of deaths registered, above the weekly average. But, it must be observed, that the excess is only to a slight extent produced by increased mortality: it is almost entirely due to an accumulation of Coroner's cases, most of which occurred in former weeks, but were not registered till the end of the quarter. The whole number of inquests registered last week is 305; the whole number during the quarter, 780; the weekly average is 60. If no more than the average number of inquests is assigned to last week, the mortality which actually occurred in the week may be stated, by approximation, as 1,012 deaths. Scarlatina, the mortality from which is more than fourfold the average, seems to be the only epidemic which now prevails to an excessive degree. In the above table, Coroner's cases fall principally under *violent* and *sudden* deaths.

This table contains throughout the Deaths in Wandsworth and Clapham; Lewisham, and Hampstead.

Cases of CHOLERA returned in the Week ending Sept. 30th.—(All are certified by Medical Attendant.)

In Belgrave (sub-district), St. George, Hanover-square, F. 74 years, "English cholera (18 days' duration)."	In Amwell, Clerkenwell, F. 40 years, "bronchitis (23 years' duration); English cholera (1 week)."
In North sub-district St. Giles in the Fields, F. 4 years, "English cholera (10 hours' duration)."	In Mile End Old Town (Upper), a girl, 3 months "cholera infantum."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 38.

(The tabular abstract on the first page is for the week ending Saturday, Sept. 30th. The following selection of cases is made from the Returns for the week ending Sept. 23rd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Wherever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
In Westminster Hospital, labourer 21, compound comminuted fracture of the skull and left leg, by falling about 80 feet from a scaffold at the Houses of Parliament, when letting down a chain, which pulled him over.....	5 days	In St. Thomas' Hospital, guard on the South Western Railway, 29 (post mort.), fracture of his skull, caused by falling from a railway train in motion, between the Putney and Wandsworth station; but no evidence of the cause of his fall.....	12 hours	M. 18, accidentally drowned by a fall from a barge.....	
In Westminster Hospital, jobbing man, 39 (post mort.), fracture of the skull by falling from a fascia, when cleaning a window at 56, Sutton-ground.....	2 days	In St. Thomas' Hospital, foreman to a farmer, 44 (post mort.), fracture of his skull by being thrown out of his employer's cart at London Bridge, by a phaeton running against it.....	a few minutes	Private night-watchman, 53, accidentally drowned by falling into the water of the Thames (in water about 10 hours).	
M. 5 hours (no inq.), injuries from a fall sustained by the mother.....	a few days prior to birth	F. 83 (no inq.), contusion of the leg.....	3 months	F. (person unknown) from 10 to 14 days, drowned; wilful murder against some person or persons, unknown (in water 8 to 10 hours.)	
Son of a sack-maker, 1, inflammation of the brain from a blow on the head—knocked down on the foot pavement by another boy who was running.....	20 days	Wounds:—		Hanging and Suffocation:—	
Laundress, 35, accidental death by a fall down stairs.....	2 hours	In Denton-street, clerk to a barrister, 29, suicide by cutting his throat with a razor; state of mind unknown.....	*	M. 65, hanged himself to a bed-post—delirium tremens.....	instant
F. 4 (no inquest) a fall, producing apoplexy and convulsions.....	2 days	M. 38, accidental death from a hook of iron wire running into his brain between his eye and eyelid.....	*	Burns and Scalds:—	
Labourer, 63, accidental death from a blow on his foot, by a stool, causing erysipelas.....	*	Drowning:—		Daughter of an upholsterer, 2, burns of the body and limbs, from the house taking fire accidentally.....	instant
		Wife of a plasterer, 46, drowning in the Regent's Canal—suicide; not known whether insane.		In St. Thomas' Hospital, son of a clerk deceased, 7, burnt by his night gown taking fire, whilst lighting a fire (at Vauxhall).....	6 hours
		Mariner, 23, accidentally drowned in the London Docks.		Other Violence:—	
				F. 50, manslaughter against William Merrick.....	*
				M. 42, natural death, accelerated by lifting excessive weights.....	2 weeks & days

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION,

PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Childbirth (continued):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		St. GEORGE IN THE EAST; St. Paul,		F. 31, puerperal peritonitis.....	5 days
KENSINGTON; Fulham.		M. 1, small pox.....	7 days	F. 23, cerebral affection from childbirth on the 9th day.	
M. 4, variola.....	10 days	(vaccinated 9 days previous to eruption without effect.)		F. 24, delivery of a still-born child.....	12 days
M. 1, febris.....	7 days	St. Mary's		pleuro-pneumonia.....	3 days
variola.....	6 days	M. 6, small pox.....	7 days	Delirium Tremens:—	
St. LUKE; Chelsea, North-West.		scarlet fever.....	7 days	M. 35, delirium tremens.....	*
M. 8, small pox.....	11 days	F. 2, malignant small pox (not vaccinated) ..	1 week	M. 33, delirium tremens—collapse.....	*
Chelsea, North-east.		St. SAVIOUR; St. Saviour.		M. 35, delirium tremens.....	3 weeks
M. 11, variola.....	7 days	M. 1, small pox.....	5 days	effusion on the brain.....	*
F. 33, confluent small pox after delivery of a female child.....	10 days	(not vaccinated—no medical attendant.)		Intemperance:—	
previously vaccinated.		BERMONDSEY; St. Mary Magdalen.		M. 45 (inquest), apoplexy brought on by drinking ardent spirits, and going to sleep immediately afterwards in a confined atmosphere.....	*
F. (child mentioned in preceding entry), 11 days, small pox—convulsions.....	*	F. 2, small pox (not vaccinated).....	14 days	Privation; Want of Breast-milk; &c:—	
(not vaccinated.)		St. GEORGE, SOUTHWARK; Borough-road.		F. 3 weeks, marasmus, partly congenital, and partly from want of breastmilk.....	*
F. 34, low typhoid fever, sequela of small pox (not vaccinated.)	*	F. 1, variola (not vaccinated).....	8 days	M. 1, marasmus from want of proper nourishment.....	3 months
St. GEORGE, HANOVER SQUARE; Belgrave.		St. MARY, NEWINGTON; Trinity.		Purpura:—	
M. 3, small pox (not vaccinated).....	5 days	M. 2, small pox (unprotected).....	*	F. 35, purpura—effusion in the brain.....	12 days
M. 13 days, icterus; congenital small pox.....	*	LAMBETH; Waterloo (first part).		F. 27, eczema—febris bullosa.....	6 days
(not vaccinated.)		M. 1 month, small pox.....	11 days	purpura hæmorrhagica.....	*
M. 4, confluent small pox.....	9 days	effusion.....	3 days	Hæmorrhage, Hæmatemesis, &c:—	
vaccination performed a fortnight before eruption, but did not take well.		F. 1, variola (confluent).....	12 days	M. about 45 (inquest), sudden; natural hæmorrhage from the lungs.....	instant
WESTMINSTER; St. John the Evangelist.		Waterloo (second part.)		M. 52 (post mort.), rupture of a blood-vessel in the bowels.....	*
F. 2, variola (not vaccinated).....	14 days	F. 6 months, variola.....	12 days	M. 45 (inquest), rupture of a vessel in the lungs.....	sudden
M. 3, variola (vaccination doubtful).....	10 days	Lambeth Church (second part.)		F. 35, hæmorrhage from the lungs.....	9 months
St. Margaret.		F. 7 months, small pox.....	7 days	Miscellaneous Cases:—	
M. under 1, variola (not vaccinated).....	*	pneumonia.....	3 days	The three following are children of a journeyman plasterer, who lived in a confined neighbourhood in Chelsea:—	
M. under 1, variola (not vaccinated).....	9 days	vaccinated at 3 months without effect.		F. 5, scarlatina.....	5 days
M. 3, variola, confluent, natural (not vaccinated)	*	Syphilis:—		M. 3, convulsions.....	2 days
F. 3, variola (not vaccinated).....	2 weeks	F. 45, secondary syphilis—dysentery.....	*	diarrhoea.....	*
MARYLEBONE; St. Margaret.		Malformations:—		M. 1, malignant sore throat.....	3 days
M. 2, retrocicent small pox (not vaccinated) ..	*	M. 29 hours, malformation of the heart.		Bricklayer, 46, fever from exposure to foul air, 9 days	
St. PANCRAS; Camden Town.		M. 5 days, anus imperforatus.		Mr. Holl, the Registrar, states, that "this man was affected by the effluvia from a drain where he was at work, in the neighbourhood of Judd-street, New-road."	
In Small Pox Hospital, M. 15, small pox, confluent, unprotected.....	23 days	F. 6 days, spina bifida—convulsions.....	*	In Spitalfields, M. 12, scarlatina.....	1 week
hospital gangrene.....	*	M. 2 months, cleft palate—deficiency of left palate.		In Whitechapel (North), M. 13 (inquest), fever caused by the noxious effluvia of a privy ..	*
M. 4, small pox (not vaccinated).....	14 days	marasious.....	8 weeks	F. 1, abscesses following vaccination; consumption.....	9 weeks
STRAND; St. Mary.		Hernia:—		M. 42, stricture of urethra.....	15 years
M. 4, variola confluent.....	7 days	F. 69, hernia.....	20 years	effusion of urine into the surrounding cellular and muscular parts, consequent on suppurating and gangrene.....	4 months
EAST LONDON; St. Botolph.		strangulated.....	*	In Dreadnought Hospital, M. 25 (post mort.), phthisis.....	about 8 months
F. 9 months, small pox.....	*	F. 60, strangulated femoral hernia.....	6 days	cavities in right lung.	
(1st attack—not vaccinated)		operation on 5th day.		pleuritic adhesions and effusion of lymph.	
CITY OF LONDON; South-east.		Diabetes: Stone:—			
F. 17, variola.....	12 days	No deaths in the abstract of the week under either of these heads.			
SHOREDITCH; St. Leonard.		Childbirth:—			
F. 3, small pox.....	10 days	The time elapsing from commencement of labour to death should invariably be returned.			
vaccinated when 3 months old.		F. 32, childbirth.....	*		
		puerperal fever.....	7 days		
		F. 19, childbirth.....	*		
		puerperal fever.....	6 days		

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 5; hæmorrhage, 2; disease of heart, 2; fever from nuisance, 1; intemperance, 1; violence, 19; other specified causes, 10; "found dead," "natural death," "visitation of God," &c., 10.—TOTAL, 50 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 35.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 30th September, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 5 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 7 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was overcast till 1h. 30m. p.m., generally one-half covered till 9h. p.m. and again overcast afterwards; cirrostratus and scud. Rain was falling during the morning.
MON.	Positive, and tension strong at 9h. a.m. Nothing was shewn at any other examination.	The sky was overcast till 7h. a.m., the clouds were variable in amount till 4h. p.m., and overcast afterwards: cirrostratus, fleecy clouds, and scud.
TUES.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling generally throughout the day.
WED.	Nothing was shewn throughout the day.	The clouds were occasionally slightly broken between noon and 6h. p.m., the sky was otherwise overcast during the day; cirrostratus and scud. Rain was falling from 0h. a.m., till 5h. 30m. a.m. and again at midnight.
THURS.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain commenced falling at 9h. 15m. a.m., and continued throughout the remainder of the day.
FRID.	Nothing was shewn throughout the day	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling generally throughout the day.
SAT.	Positive, and tension weak from 11h. a.m. till noon, and variable from 6 p.m. till midnight. Nothing was shewn at any other time during the day.	The sky was overcast till 7h. a.m., three-fourths were covered till 5h. p.m., and overcast afterwards; cirrostratus and scud. Thin rain was falling from 11h. p.m. till midnight.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours (from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1; 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 56'2; and the mean reading at 6h. p.m. was 58'2; the mean readings at the Royal Observatory for the same times were 55'0 and 57'5 respectively.

The maximum thermometer for determining the temperature of the water of the Thames was away during the week for repair.

The amount of rain fallen on September 27, was omitted to be recorded; the number 0'75 in, inserted on September 28, is therefore the amount fallen on two days.

Births and Deaths registered in London,
During the Week ending Saturday, October 7th, 1848.

ANNUAL SERIES IX.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL. [No. 40.

* The return of Mr. Jones, the Registrar for the sub-district of St. Clement Danes, was not received on Monday in time for publication ; the averages for the last six weeks are 3 births and 7 deaths which latter are included under causes not specified. For cases of CHOLERA registered last week see bottom of fourth page.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 39.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 7th. The following selection of cases is made from the Returns for the week ending Sept. 30th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions.—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
Carpenter, 63, injury—probably fracture of the skull by falling from the roof of a house at Mr. Rigby's wharf, when at work.....	instant	In Charing Cross Hospital, carman, about 42 (post mort.), inflammation of the lungs from a wound—rib fractured by the shaft of a cart, which he was driving into a gateway, at Short's-gardens, St. Giles'.....	3 days	M. 5, found drowned in a pond in Springfield, Sydenham-common.	
F. (age not stated) internal injury, by falling down stairs at the "Nag's Head" public-house, James-street, Covent-garden (the cellar-door having been mistaken for that leading up stairs).....	24 hours	At 7, York-terrace, merchant, 44, injuries of the head by an accidental fall from his horse in Hyde Park.....	*	F. 1, suffocated by falling into a tub, containing soap suds and soda, with her face downwards.....	5 minutes
M. 46, peritonitis, from rupture of the bladder and extravasation of urine, caused accidentally by violence in a struggle with Edward Stanton when drunk, at a tavern in Lambeth.....	6 days	In University College Hospital, coal-porter, 39, crushing of the organs of the chest and abdomen by a wheel of a coal-wagon; he had fallen from it by accidental over-balancing.....	*	Shopkeeper, 44, accidentally drowned by falling from a plank (in London Docks); immersed 55 minutes.	
In University College Hospital, bricklayer, 28, crushing of chest and abdomen from the fall of a scaffold, in consequence of the sudden breaking of a decayed ledger-pole, at 16, Market-street.....	*	In University College Hospital, daughter of a trunk-maker, 2, crushing of the chest by a dray-horse—she had been knocked down by the horse when crossing the road alone.....	30 min.	Captain of a ship, "The John Tennant," 46, accidental death from a fall and suffocation in mud and water.	
In University College Hospital, painter, 23, effects of an accidental fall.....	*	In King's College Hospital, carman, 44 (p.m.), inflammation and obstruction of the vein of the left leg, after fracture and amputation of left thumb, which was crushed between the shaft of a cart and a door-post, when unharnessing the horse.....	37 days	Son of a bargeman, 10, found dead without marks of violence—apparently drowned.	
In King's College Hospital, son of a tailor, 5 (post mort.), fracture of the skull—not sufficient evidence how caused—supposed to have fallen from a wall into the area of the College of Surgeons, Lincoln's Inn-fields, whilst playing on the wall with other children.....	31 hours	In London Hospital, F. servant 19, manslaughter against Thomas Jones—run over by a cart—rupture of the lung.....	*	Son of a school-master, 13, found drowned in Regent's Canal without marks, how caused no evidence (immersed 15 minutes.)	
In King's College Hospital, plumber, 48 (p.m.) compound fracture of right thigh, by falling from a scaffold when at work in the Strand. The scaffold is supposed to have fallen from the poles being displaced by a cart having run against them.....	4 days	Daughter of a warehouseman, 2, injury of the thigh, ribs, and face, from being thrown down by a brewer's dray accidentally.....	12 days	Hat-packer, 9, drowned—no marks of violence—no proof how he came into the water (supposed to have been in water 2 hours).	
In King's College Hospital, hoot-closer, 22 (post mort.), ribs fractured and perforating the lungs—fell from an attic window in Dean-street, Holborn, at which he is supposed to have been leaning out when intoxicated.....	5 days	Son of a warehouseman, 9 (post mort.), howel divided by the wheel of a cart, passing accidentally over the abdomen—no external injury of abdomen.....	18 hours	Waterman, 32, drowned by falling out of a barge into the Thames accidentally (in water 27 hours)	
M. 54, injury to his brain by falling from a ladder at Silver-street.....	3 days	F. 8, injuries from being run over by a coal-wagon accidentally.....	*	F. about 30, found drowned in the River Thames—no marks of violence—no proof how she came therein (in water about 3 days.)	
F. 34, bruises and fractures, caused by throwing herself off Blackfriars-bridge, and falling on one of the abutments (temporary insanity) body found 4 hours afterwards.		Horse-dealer, 59, internal injuries from being accidentally thrown out of a cart.....	5 days	Son of a labourer, 9, accidentally drowned in the Thames, by falling off a log of timber, reaching after a cork (in water 4 days).	
Widow of a carpenter, 73, accidental fall, fracturing the neck of the thigh bone.....	7 days	Son of a mason, 4, internal injuries by the rear wheel of a cart passing over his body accidentally.....	13 hour	Porter, 20, accidentally drowned by jumping into the Thames to save a companion (in water 1 day).	
In London Hospital, labourer, 58, fell from a derrick, and fractured his thigh and arm.....	5 days	M. 21 (post mort.), ruptured liver from violent concussion, being thrown from a chaise which he was driving at Dulwich.....	10 days	Mason, 19, accidentally drowned by falling off a barge into the Thames (in water 7 days.)	
In London Hospital, tailor, 30, accidental fall in attempting to wrestle—crisipelas arising from a wound on his head.....	14 days	Gunner and driver in the Royal Artillery, 24, injuries on the chest from being trodden on by a horse accidentally.....	1 hour	Dress-maker, single woman, 37, submersion in the water of the Thames—no marks of violence—no proof how she came therein (in water a few minutes).	
In St. George's Hospital, mason's labourer, 43 (post mort.), comminuted fracture of left thigh, by a stone of 25 cwt., which fell upon him as he was adjusting a chain over it, at Bridgewater House.....	5 hours	In St. George's Hospital, labourer, 29 (p.m.), fracture of right foot and amputation of leg, which was struck by a pump lever, at Sir Felix Booth's distillery, Brentford.....	34 days	Lahourer, 63, drowned—found dead in the Grand Surrey Canal.	
In London Hospital, spinster (no business), 58, fall from a footpath, how caused unknown—fractured leg.....	*	Farmer, 62, fractured ribs—inflammation of chest—disease of lungs.....	7 weeks	Single woman, servant, about 38, suicide by drowning in temporary derangement.	
Crucifer pot-maker, 51, natural death, accelerated by a fall—rupture of a vessel internally.....	sudden	Engine-driver, 69, fractured skull—by what cause no evidence.....	3 weeks	Single woman, servant, 23, apparently drowned—found dead in the Grand Surrey Canal.	
Daughter of a pattern-drawer, 1, fracture of the skull by falling out of a second floor window.....	18 days	M. 7, fever accelerated by a blow on the right groin—how caused unknown.....	*	Lahourer, 52, found drowned in a pail of water.	
Labourer, 45, injuries received from accidentally slipping and falling on the deck of a barge in the River Thames.....	*	M. 74 (no inq.), chronic abscess in the left axilla, consequent on fracture of the humerus.....	11 months	Son of a smith, 6, accidentally drowned in the River Thames, by falling out of a boat—(under water 1 hour).	
Corporal of the Royal Marines, about 26, injuries to the head from having fallen accidentally down the hold of H.M. Ship "Nymph," off Woolwich.		ascites.....	4 months	Son of a shipwright, 11, accidentally drowned in the Grand Surrey Canal.	
M. 16, injuries to the thigh and leg from being accidentally crushed under a piece of timber.		hydrothorax.....	6 days	F. 14, suicide by drowning in temporary derangement.	
Sea-apprentice, 14, injuries received by falling accidentally from the foretop-mast to the deck of the ship "Albion".....	1 hour	Wounds:—		Son of a labourer, 12, accidentally drowned in the Thames while bathing.	
Plasterer about 40, concussion and injuries to the head by falling to the ground—part of the scaffold, from his jumping thereon, causing the patlock to break—accidental.	10 minutes	Single woman, 23, suicide by cutting her throat; not known whether insane.....	*	Son of a labourer, 14, accidentally drowned in the Thames by falling off a steam-boat.	
F. 64, concussion of the brain from an accidental fall.		M. 36, suicide with a razor after intoxication, being insane.....	*	Tidewater, 32, accidentally drowned in the Thames.	
M. 70, concussion of the brain from an accidental fall in a boat.		In London Hospital, potman, 34, bite of a cat on his right hand—crisipelas supervening, but how caused unknown.....	7 days	F. person unknown, about 24, found dead in the River Thames.	
Seaman, about 35, fracture of the base of the brain from a fall.....	10 days	M. 41, cut his throat in a temporary state of insanity.....	*	Seaman unknown, about 45, found dead in the waters of the Thames at Woolwich.	
Sea-apprentice, 15, fracture of the skull by an accidental fall from the gaff of a brig.....	*	Commercial clerk, 22, cut his throat with a razor, being of unsound mind, resulting from bodily illness.....	instant	M. name and rank unknown, about 24, found dead in the Thames off Woolwich.	
In St. George's Hospital, green-grocer, 35, (post mort.), rupture of bladder by falling out of a cart which he was driving in Fulham-road, the wheel of which went over his body.....	5 days	F. 31 (post mort.), penetration of the mouth of the uterus in an act to produce abortion—wilful murder against Spencer Lindfield; and against Richard Orpin and Mary Ann Dryden, as accessories before the fact.		Lahourer, name unknown, about 25, found dead in the Thames off Woolwich.	
In St. George's Hospital, cab-driver, 27 (p.m.), fractured skull from the upsetting of a cab which he was driving, and which came in contact with another cab, from his horse having run away.....	6 days	Private, lately in the Royal Marines, 45, suicide by cutting his throat, at the time labouring under temporary derangement.....	*	Spinster, 21, suicide by drowning in the River Thames—insanity.	
In St. George's Hospital, domestic coachman, 51 (post mort.), fracture of skull and ribs, from being knocked down and trampled on by a horse, which attacked him in the stable, No. 9, Albion Mews.....	5 days	Wife of a tailor, 49, disease of the chest, accelerated by a wound in the throat.....	*	Waiter, 14, drowned in the Thames; found off Woolwich.	
In St. George's Hospital, jeweller, 40 (p.m.), fractured skull and concussion of the brain from having been knocked down by a horse drawing a cart, at Knightsbridge.....	13 days	Pensioner from Royal Artillery, 60, suicide by cutting his throat (insanity).....	4 days	M. name and age unknown, apparently drowned—found in the Thames greatly decomposed.	
		Clothier, 22, suicide by shooting himself in the head with a pistol loaded with gunpowder and a bullet (temporary insanity).		M. pauper, name unknown, 12, supposed to have been drowned—found in the Thames off Woolwich.	
		Locksmith and bell-hanger, 53, suicide by cutting his throat in a state of temporary mental derangement.....	10 minutes	Labourer, name unknown, about 30, found dead in a ditch apparently from drowning, at North Woolwich.	
		Son of a gardener, 3, gun-shot wound—accidental.....	instant	Apprenticed seaman, 19, accidentally drowned by the swamping of a boat in the Thames.	
		Drowning:—		Gunner in the Royal Artillery 19, accidentally drowned whilst bathing in the Arsenal Canal.	
		Widow (post mort.), Bright's disease; but whether accelerated by immersion in water, not sufficient evidence—fell into a sewer in Kanelagh-grove, and died. in 29 hours afterwards		Apprenticed seaman, 20, accidentally drowned by the swamping of a boat in the Thames.	
		M., companion to a gentleman, 74, suffocation by drowning in Regent's Canal; whether suicide or otherwise unknown.		Gentleman cadet, 16, accidentally drowned in the Arsenal Canal whilst bathing.	
		M. 41, drowned—not known how he came into the water—had previously attempted suicide.		M. name and rank unknown, about 13, apparently drowned—found in the Thames off Woolwich.	
		M. 13, accidentally drowned in a pond.		Pawnbroker, 19, accidentally drowned in the River Thames—found off Woolwich—(in water 1 day).	
				Sailor, about 14, found dead in the Thames, off Woolwich.	
				Labourer, 20, found dead in the Thames, off Woolwich.	
				M. 12, accidentally drowned in the Thames whilst bathing.	
				M. 13, accidentally drowned in the River Thames by falling overboard from a fishing boat.	
				Seaman, about 55, found dead in the Thames—no evidence how he came therein.	
				Son of a mariner, 9, found dead in the Thames, apparently from drowning.	

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER (continued)

Drowning (continued):—	duration	Hanging and Suffocation (continued):—	duration	Burns and Scalds (continued):—	duration
Labourer, about 30, found dead in the Thames no other evidence.		M. 3, found dead in a privy, apparently suffocated—how caused unknown.		In London Hospital, F. servant 16, accidentally burnt by her clothes taking fire.....	7 days
M. (unknown) about 14, found dead in the Thames.		M. 1, suffocation from some foreign substance accidentally lodging in the throat after a meal.....	1½ hour	Son of a labourer, 1, burns received by his night dress accidentally taking fire from a candle.	
Single woman, 26, drowned in the Thames from a fishing boat.		M. newly born, (post. mort.), (rank of parents unknown) suffocation; no evidence how caused—found dead.		Daughter of a captain in the Royal Engineers, 6, injuries from being accidentally burnt, her clothes having caught fire.....	3 weeks
Ship carpenter, 33, found drowned in the River Thames.				Wife of a jeweller, 22, burn inside her thighs, the lower part of her body, her elbows and shoulders, accidentally received from her clothes taking fire from the grate.....	24 hours
Daughter of a carpenter, 1, accidentally suffocated in a tub of water.				Ship carpenter, 45, and stoker, 44, injuries from being scalded by the accidental breaking of the steam-pipe of the engine on board the "Earl of Liverpool" steamer.....	instant
Hanging and Suffocation:—					
M. 30, hanged himself by a cord to a gimlet in the joist of a ceiling.....	a few minutes	In St. George's Hospital, F. 89, burns of the body from the apron taking fire when filling a teapot from a kettle on the fire (at Starch Green, Hammersmith).....	24 hours	Poison:—	
M. 33, hanging himself by a cord to a gashook in the wall of his apartment (insane).....	a few minutes	In Westminster Hospital, daughter of a sawyer, 5, burn of the body and limbs from her clothes taking fire at a grate when playing, it is supposed, with a piece of wood.....	20 hours	Daughter of a servant, 4 months, (post. mort.), arsenic—wilful murder by Mary Spry and Mary Anne Dere, the grandmother and mother.....	
Groom, 25, suicide by hanging in a state of temporary insanity resulting from habits of intemperance.		In King's College Hospital, wife of a cabriolet driver, 36, (post. mort.), burn of body and limbs—bed-clothes took fire from a candle which she had placed by the bedside.....	18 days	Schoolmistress, about 80, suicide by laudanum (1 oz.) while insane.....	10 hours
Son of a carpenter, 13, found suspended by the neck, with a strap—no evidence of intention to commit suicide—supposed to be accidental.		M. 13, accidentally burnt in a house which took fire (cause of fire unknown).....	*	M. 53, congestion of the lungs induced by eating largely of muscles.....	*
M. 4, accidentally hung by slipping his neck across some timber.		In London Hospital, daughter of a labourer, 5, accidental from burns by clothes taking fire in a room at Poplar.....	11 days	F. 1 week, poison (syrup of poppies) administered in ignorance of its effects.....	24 hours
M. 7 weeks, convulsions.....	sudden	In London Hospital, daughter of a milliner's assistant, 9, burns received at a house on fire, but how caused unknown.....	*	Navy surgeon, 64, prussic acid, whether taken intentionally or not there is no evidence to prove.....	*
F. 51, found dead, with her face on the floor apparently suffocated—no marks of violence.					

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Phthisis and Childbirth:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		LAMBETH; Waterloo (second part).		F. 23, phthisis.....	*
CHELSEA; South.		M. 5, sudden—rupture of a bloodvessel from cough after small pox.....	*	childbirth (at 7½ months).....	4 days
M. 3, small pox; fever (vaccinated).....	31 days	———— Lambeth Church (second part.)		Delirium Tremens:—	
F. 4, variola (confluent).....	13 days	M. 3, small pox (not vaccinated).....	19 days	M. 33, delirium tremens.....	*
exhaustion from general irritation, not vaccinated.		CAMBERWELL; Peckham.		epileptic fit.....	2 days before death
F. 3, variola (not vaccinated).....	4 days	M. 2, small pox (not vaccinated).....	16 days	M. 39, (inq.), found dead in bed without marks of violence—subject to delirium tremens..	*
WESTMINSTER; St. John the Evangelist.		GREENWICH; Woolwich Arsenal.		Intemperance:—	
F. 7 months, variola confluent (not vaccinated) 11 days		In Royal Ordnance Hospital, M. 22, small pox (vaccinated); ulcers and disease of lungs..	84 days	M. 60, (inq.), died with symptoms of apoplexy—while intoxicated.....	*
———— St. Margaret.		WANDSWORTH AND CLAPHAM; Battersea.		M. 53, (inq.), exhaustion of the nervous system from natural causes, after frequent intoxication.....	*
M. under 1, variola confluent (natural; not vaccinated).....	*	F. 1, variola (not vaccinated).....	17 days	F. 41, (inq.), alcoholic liquors—died while drunk with gin.....	*
M. 1, variola (not vaccinated).....	10 days	LEWISHAM; Plumstead and Charlton.		Painter and glazier, 37, delirium tremens caused by excessive drinking.....	ill 3 days
F. 23, typhoid variola.....	*	F. 1, small pox.....	10 days	Privation:—	
ST. PANCRAS; Tottenham.		Chicken Pox:—		Cheesemonger, about 40, (inq.), exhaustion from not taking proper nourishment ..	ill several months
M. 9, small pox.....	*	HOLBORN; St. Andrew, East.		Diarrhoea and Privation:—	
———— Gray's Inn-lane.		M. 1, chicken pox.....	8 days	F. 75, (inq.), exhaustion from diarrhoea while she was depriving herself of many of the necessary nourishments of life.....	*
M. 24, natural small pox.....	10 days	bronchitis.....	3 days	Purpura:—	
vaccinated many years ago without effect.		Syphilis:—		F. 2, purpura hæmorrhagica.....	6 days
———— Camden Town.		M. under 1, syphilis.....	congenital	Hæmorrhage, Hæmatemesis, &c.:—	
In Small Pox Hospital, M. 22, small pox confluent, unprotected.....	29 days	pneumonia.....	15 days	M. 42, (inq.), sudden hæmorrhage from the lungs.....	*
In Small Pox Hospital, F. 22, small pox confluent (unprotected).....	9 days	F. 56, syphilis.....	18 months	M. 43, (inq.), natural causes—most probably the rupture of a vessel in the chest ..	a few minutes
In Small Pox Hospital, F. 25, small pox confluent.....	14 days	ulcer in the groin.....	*	F. 27, (inq.) natural death by the rupture of a vessel in the colon.....	*
vaccinated young at Grafton, Wilts.—one smooth cicatrix.		M. 5, syphilitic cachexia with ulcers of throat and mouth.....	*	F. 32, (inq.), sudden death from effusion of blood, from rupture of a vessel internally..	*
HACKNEY; West.		M. 8 months, syphilis.....	*	M. 76, (inq.), natural death—rupture of a bloodvessel of the lungs.....	instant
M. 4, small pox (not vaccinated).....	10 days	In St. Thomas' Hospital, M. 46, exhaustion consequent on syphilitic rupia.....	*	F. 33, (inq.), bursting of a bloodvessel.....	sudden
With reference to the above, Mr. Robinson, the Registrar, states, that he has ascertained that four children have now small pox in the same house—that none have been vaccinated owing to prejudice of the parents.		F. 25 days, syphilis from birth—asphyxia.	*	M. 31, (inq.), rupture of a bloodvessel.....	sudden
M. 18, confluent small pox.....	9 days	M. 1 month, syphilis.....	*	M. about 45, (inq.), natural death ..	sudden
vaccinated with effect when an infant.		F. 11 months, syphilis.....	from birth	rupture of a bloodvessel of the thorax.....	*
CLERKENWELL; Pentonville.		Malformations:—		Miscellaneous Cases:—	
F. 5 months, confluent small pox.....	11 days	M. 1, anæmia from congenital deformity of the palate.		In St. George's Hospital, M. 20, (post. mort.), caries of atlas—rupture of transverse ligament.....	*
vaccinated 10 days before.		F. 1, spina bifida—hydrocephalus.....	from birth	F. 36, (post. mort.), ovariau dropsy.....	2½ years
SHOREDITCH; St. Leonards.		M. 4 weeks, (post mort.), spina bifida ..	congenital	operation.....	3 weeks ago
F. 3, variola.....	14 days	M. 4 weeks, (post mort.), spina bifida ..	congenital	In University College Hospital, F. 16, (p. m.), natural—peritonitis (commencing 9 days after excision of the cervix uteri).....	48 hours
successfully vaccinated at the Small Pox Hospital when 6 weeks old.		F. 1, cyanosis.....	congenital	F. 5, scarlet fever.....	*
BETHNAL GREEN; Church.		Hernia:—		dropsy.....	10 days
M. 4, small pox (not vaccinated).....	4 days	In St. Bartholomew's Hospital, F. 69, hernia operation—peritonitis.....	*	had not been attended medically for scarlet fever.	
ST. GEORGE IN THE EAST; St. Mary.		F. 77, strangulated hernia.....	*	dropsy followed in consequence of exposure to cold.	
M. 1, small pox.....	5 days	Diabetes: Stone:—		fluid in the pleural cavities.	
vaccinated with effect when 4 months old.		No deaths in the abstract of the week under either of these heads.		F. 53, disease of brain producing general muscular rigidity.....	4 years
STEPNEY; Mile End, Old Town (Lower).		Childbirth:—		tonic spasm of muscles of jaws.....	2 years
F. 7, variola confluent (first attack, not vaccinated).....	13 days	The time elapsing from commencement of labour to death should invariably be returned.		M. 15, (post. mort.), chronic peritonitis.....	*
BERMONDSEY; St. Mary Magdalen.		F. 31, childbirth.....	5 days	stricture of colon—congenital malformation of intestines.	
M. 4 months, variola.....	*	F. 24, phlebitis after parturition.....	3 days	In London Hospital, M. 31, (p. m.), abscess of liver communicating with the lung and making its exit through the right bronchus—numerous hydatids in liver.....	10 weeks ill
ST. GEORGE, SOUTHWARK; Kent-road.		F. 24, phlebitis uteri.....	4 days	F. 4, (inquest), want of proper care and nourishment, strumous ophthalmia ..	of long standing
F. 7 weeks, hydrocephalus.....	7 weeks	infant stillborn; removed by opening and lessening the head.		Son of a general postman, under 1, (inquest), fit brought on through the mother being flurried with excitement.....	a few minutes
small pox (not vaccinated).....	3 days	F. 35, childbirth.....	9 days	M. 45, (inquest), congestive apoplexy from exposure to the heat of the sun.....	1½ hours
———— London-road.		peritonitis.....	7 days		
F. 1, debility, from small pox.....	4 months	F. 25, instrumental labour.....	9 days		
F. 1, variola (not vaccinated).....	*	puerperal peritonitis.....	5 days		
NEWINGTON; St. Mary.		F. 33, abortus.....	11 days		
F. 16, small pox.....	14 days	uterine phlebitis.....	9 days		
vaccinated with effect 15 years ago.		F. 33, puerperal enteritis.....	5 days		
		F. 36, abortion.....	5 days		
		peritonitis.....	5 days		
		F. 39, puerperal peritonitis.....	3 days		
		F. 24, puerperal inflammation.....	3 days		
		epilepsy.....	*		
		F. 25, (inq.), puerperal convulsions after premature delivery of a child.....	12 hours		

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 20; pulmonary apoplexy, 2; epilepsy, 1; hæmorrhage, 8; aneurism, 3; disease of heart, 13; childbirth, 1; coup-de-soleil, 1; intemperance, 3; privation, and want of care, &c., 3; violence, 140; other specified causes, 59; "found dead," "natural death," "visitation of God," &c., 51.—TOTAL, 305 cases.

THE NUMBER OF CASES IN WHICH IT IS REPORTED THAT A POST MORTEM EXAMINATION WAS MADE, IS 84.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 7th October, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature				Wind as deduced from Osler's Anemometer.				Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0—10	Rain in inches, read at midnight				
			Dry			Dew Point Highest to the sun, as shown by a self-register- ing Thermometer read at midnight	In the shade, as shown by a self-register- ing Thermometer read at midnight	In the Water of the Thames at Greenwich, by the self- registering Thermometer, read at 9 o'clock next morning		Mean from 6 Diffs.	Greatest	Least	General Direction		Pressure in lbs. on the square foot

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension moderate at each examination, except at midnight, when nothing was shewn.	The sky was generally covered with thin cirrostratus and fragments of scud till 6h. p.m., and cloudless from this time till midnight.
MON.	Nothing was shewn throughout the day.	The sky was generally overcast till 6h. a.m., one half covered till noon and overcast during the remainder of the day; cirrostratus, scud, and fleecy clouds. A shower of rain fell shortly before midnight.
TUES.	Positive and tension strong from noon till 3h. p.m. Nothing was shewn at any other time.	The sky was overcast till 6h. a.m., cloudless till 9h. a.m., three-fourths covered till 6h. p.m., and overcast afterwards; cumuli, cirrostratus, and scud. Rain was falling from 9h. a.m. till 5h. a.m.
WED.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling during the morning.
THURS.	Nothing was shewn throughout the day.	The sky was overcast till 3h. p.m., the amount of cloud was variable from this time till shortly before midnight, when the sky became again overcast; cirrostratus, scud, and haze.
FRID.	Nothing was shewn throughout the day.	The sky was generally cloudless throughout the day.
SAT.	Nothing was shewn throughout the day.	The sky was overcast till 8h. a.m., about one-half covered with clouds till 5h. p.m., and overcast afterwards; cirrostratus, fleecy clouds, and scud.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans. Part I*, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans. Part I*, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 54.9; and the mean reading at 6h. p.m. was 61.5; the mean readings at the Royal Observatory for the same times were 55.2 and 60.1 respectively.

Oct. 5.—The maximum thermometer for determining the temperature of the water of the Thames was returned after repair.

FATAL CASES OF CHOLERA returned in the Week ending Saturday the 7th.—(All are certified by Medical Attendant.)

In Old-street (sub-district) St. Luke, at 39, Rahere-street, wife of a gentleman, 59 years, "disease of the bowels simulating Asiatic cholera (38 hours duration)."
In south sub-district, west London, F. 27 years, "cholera (13 hours duration)."
In St. Bartholomew's Hospital, west London, M. about 40 years, "Asiatic cholera."
In Town (sub-district), Bethnal-green, at No. 4, Cheshire-street, a weaver F. 21 years, "enlargement of the heart (12 months' duration), cholera spasmodic (12 hours)."
In Spitalfields, Whitechapel, M. 23 years, "cholera (12 hours' duration)."
In Whitechapel north, a girl 4 years, "English sporadic cholera (7 days' duration)."
In St. Paul (sub-district) St. George in the east, M. 33 years, "cholera, (2 days' duration)."
In Mile-end, Old-town-lower, Stepney, M. 47 years, "cholera, (36 hours duration)."
Mr. CASTLEDEN, the Registrar's NOTE. Mr. Todd, the surgeon in this case, certifies, that the above was a case of Asiatic cholera; and the informant states, that her father (the deceased) got up on Thursday morning, about

4 o'clock, with a bowel complaint, for which he took some gin and ginger, and then went to his work on board ship, but which he was compelled to relinquish about mid-day. He returned home in a cab, and died yesterday morning at 4 o'clock. The medical gentleman was in close attendance to the very last."

In Lameth Church, 2nd part (sub-district), at Orsett-street, daughter of a chair-maker, 11 months, "cholera (3 days' duration): convulsions, (1 hour)."

Mr. W. H. Wheatley, the Registrar, states, "that at one end of the street mentioned above, in the centre of the road is an open drain, which is very offensive at times—drainage to houses very bad. Scarlatina has been very prevalent there."

In Rotherhithe, a boy 11 years, "cholera (19 hours' duration)."
In same sub-district, F. 33 years, "cholera (19 hours' duration)."
In same sub-district, a girl 2 years, "cholera (2 days' duration)."
In Greenwich West (sub-district) F. 37 years, "cholera (4 days' duration)."

FATAL CASES of CHOLERA returned in the Week ending Saturday the 14th.

(Five are cases in which Inquests were held: of the remainder all are certified by Medical Attendant except two.)

In London Hospital, Whitechapel Church (sub-district) M. 65 years, "diarrhoea (7 days' duration); Asiatic cholera (36 hours' duration)."
In Aldgate, a boy 1 year, "cholera Asiatic (24 hours' duration)."
In St. John (sub-district), St. George in the East, M. 28 years, a labourer, at No. 5, Green-bank, cholera Asiatic (11 hours' duration)."
In the Leather Market (sub-district), St. Mary Magdalen, Bermondsey, M. 40 years, "Asiatic cholera."
In Kennington, 1st part (sub-district) Lambeth, M. 39 years, a labourer, at 18, Kennington-place, "Asiatic cholera (4 days' duration); collapse, (16 hours)."
In Woolwich Arsenal (sub-district Greenwich), Oct. 3rd, M. about 60 years, a convict, "cholera (8 hours' duration)." Inquest.
In same sub-district, on Oct. 7th, M. 48 years, a convict, "Asiatic cholera, (11 hours' duration)." Inquest.
In same sub-district, on Oct. 7th, M. 31 years, a convict, "Asiatic cholera, (4 hours' duration)." Inquest.
In same sub-district, on Oct. 8th, M. 42 years, a convict, "Asiatic cholera, (13 hours' duration)." Inquest.
In same sub-district, Oct. 10th, M. 55 years, a convict, "Asiatic cholera, (8 hours' duration)." Inquest.
Mr. Richard Rixon, the Registrar, states, that "The above 5 deaths occurred on board the Unité Hospital Ship in the River Thames off the Royal Arsenal. There have been no cases in the Arsenal or in any part of the town to his knowledge—and he has made every inquiry."
In St. Olave and St. Thomas (sub-district), at 11, Magdalen-court, Tooley-street, F. 49 years, (kept a fruit stall in Bermondsey-street), "Asiatic cholera, (18 hours' duration)."
In Chelsea South (sub-district) M. 14 years, "cholera morbus (16 hours' duration)."

In same sub-district M. 40, years, "cholera morbus (30 hours' duration)."
In same sub-district, M. 68 years, p. m., "cholera morbus (12 hours' duration)."
In same sub-district, M. 46 years, "cholera Anglica (1 week's duration), delirium tremens, cirrhosis."
In same sub-district, F. 13 years, p. m., "cholera morbus (37 hours' duration)."
In the Green (sub-district) Bethnal Green, a boy, 11 weeks, "English cholera (1 week's duration)."
In Spitalfields (sub-district), F. 32 years, "malignant cholera (29 hours' duration)."
In St. John (sub-district), St. Olave's, M. 77 years, "cholera (65½ hours' duration)."
* In same sub-district, M. 30 years "cholera maligna (32 hours' duration)."
* In the same house, F. 2, "diarrhoea, convulsions."
In St. James, Bermondsey, a girl 7 years, "cholera (13 hours' duration)." No medical attendant.
In Lambeth Church, 1st part (sub-district), M. 22 years, "cholera (9 hours' duration)." Not certified.
In same sub-district, M. 25 years "cholera (2 days' duration)."
In Rotherhithe, M. 29 years, "English cholera (24 hours' duration)."
In same sub-district, a boy, 6 years, "cholera (24 hours' duration)."
In St. Paul's Deptford, Greenwich, F. 31 years, "cholera (4 days' duration)."
In Dreadnought Hospital Ship, Greenwich, West (sub-district), M. 21 years, "cholera."
In same ship— M. 23 years, "cholera."
In same ship— M. 16 years, p. m., "recovery from small pox,—diarrhoea (27 days' duration), sudden vomiting, purging, and collapse—(about 24 hours)."
In Clapham (sub district), M. 44 years, a bricklayer, "malignant cholera (9 hours' duration)."

* Mr. Benstel, the Registrar of St. John, Horselydown, states, "These two cases were those of a father and daughter, who lived at No. 13, Sard's-rents, Church-street, St. John's, Southwark; the latter died of 'diarrhoea, followed by convulsions;' the former of 'malignant cholera,' was attacked at 12 o'clock on Friday, Oct. 14th, and died at 4h. p.m. on Saturday. From enquiries I have made it appears, that he was a very sober and industrious man; that he and his wife were cleanly in their habits, but that one or another of the family has been constantly ill since they lived in their present residence. There are, I believe, upwards of 20 houses within 4 or 5 feet of a filthy open sewer, and this fact has been constantly represented to me (as Registrar) by the inhabitants of those houses. The illness which is caused by so great a nuisance can hardly be wondered at, for in some places I do not think it is above 3 feet from their doors. The deceased has left two children, one not out of danger and the other very ill. These circumstances have been more impressed on my attention by a visit from the medical gentlemen (Messrs. Phillips and Bntton) who attended the cases, and state as their opinion, that this open sewer was the principal cause of the illness."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 40.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 14th. The following selection of cases is made from the Returns for the week ending Oct. 7th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Drowning (continued):—	duration
In St. Bartholomew's Hospital, wheelwright 25 (<i>post. mort.</i>), epileptic fit, caused by excitement after a fracture of his left leg, by falling from a ladder at Bishopsgate-street, 30 hours		In St. Bartholomew's Hospital, cutler 82 (<i>p.m.</i>), exhaustion from erysipelas—fracture of his right leg by a cab running over him at Holborn-bridge. 25 days		Labourer, 24, drowned by missing his footing whilst stepping on the gunwale of a lighted, at East-lane, Bermoudsey (under water 11 hours).	
In St. Bartholomew's Hospital, widow of a carpenter 81, old age, accelerated by the effects of a fall, at Wynyard-street, Clerkenwell. 6 weeks		Son of a commercial clerk 4, internal injuries by the wheel of a private carriage pressing against his body, having been knocked down by the horses thereof accidentally .. 12 hours		F. about 45, drowned, no marks of violence—no proof how she came into the water—2 hours in the Surrey Canal.	
In Dreadnought Hospital, M. 38 (<i>post mort.</i> , no <i>inq.</i>), double pneumonia with pleurisy, after a fall. 6 days		Wounds:—		Hanging and Suffocation:—	
M. 6 months (<i>no inquest</i>), fall .. 6 days		F. 40 (<i>no inq.</i>), cut finger—crispelas. *		M. 74, hanged himself in temporary state of insanity.	
M. 55, fractured skull by the rear wheel of a cart, from which he had fallen accidentally, passing over his head .. instant		In St. Bartholomew's Hospital, porter 54, cutting his throat with a knife, at No. 13, Friday-street (in temporary insanity) 4 days		Burns and Scalds:—	
		In St. Bartholomew's Hospital, carpenter 72 (<i>post. mort.</i>), shooting himself in the mouth with a pistol loaded with ball (in temporary insanity) .. 5 days		F. 1, accidental scald. *	
		Drowning:—		In St. Bartholomew's Hospital, son of a single woman, 4 months, scalded by the upsetting of a saucepan of boiling milk (at Cornwall-road, Lambeth) .. 9 days	
		M. 12, accidentally drowned in the Thames by falling from a ship.			

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Childbirth (continued):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		STEPNEY; Mile End, Old Town (Lower).		F. 22, childbirth. 10 days	
PADDINGTON; St. John.		M. 4 months, small pox (first attack— <i>not vaccinated</i>) .. 8 days		puerperal peritonitis .. 5 days	
M. 3 months, small pox (<i>not vaccinated</i>) 10 days		M. 4, small pox .. 8 days		F. 31, childbirth. 6 days	
F. 7, small pox (<i>not vaccinated</i>) .. 17 days		sloughing of genitals.		puerperal fever. 3 days	
KENSINGTON; Fulham.		a pauper child—parents unknown—taken into the workhouse in the last stage.		F. 28, scarlatina maligna, 3 days after parturition.	
F. 6 months, variola .. 11 days		F. 1, small pox (1st attack— <i>not vaccinated</i>) .. 8 days		childbirth. 6 days	
CHELSEA; South.		ST. OLAVE; St. Olave and St. Thomas.		F. 32, parturition .. 8 days	
F. 2, variola confluent (<i>not vaccinated</i>) .. 3 weeks		M. 3, variola confluent. 5 days		crispelas .. 4 days	
North-east.		LAMBETH; Waterloo (1st part).		F. 32, childbirth. *	
F. 2, small pox (after previous vaccination) .. 11 days		M. 6, confluent small pox. 6 days		F. 46, debility after parturition .. 12 days	
F. 10 months, small pox (after previous vaccination) .. 10 days		congestion .. 2 days		F. 25, uterine hæmorrhage .. 6 weeks	
ST. GEORGE, MANOEB-SQUARE; Belgrave.		vaccinated 5 years ago—one cicatrix.		progressive emaciation—debility—exhaustion .. 6 months	
M. 1, confluent small pox (<i>not vaccinated</i>) .. 11 days		Church (second part.)		Query—Did this occur after childbirth?	
M. 9, small pox (after cow pox) .. 6 days		F. 25, small pox. 7 days		Phthisis and Childbirth:—	
WESTMINSTER; St. John the Evangelist.		vaccinated when young.		F. 38, phthisis .. 15 months	
M. 2, variola confluent (<i>not vaccinated</i>) .. 13 days		premature labour. *		delivery at full time .. 3 months ago	
St. Margaret.		Kennington (1st part).		Delirium Tremens:—	
M. 3, small pox (<i>not vaccinated</i>) .. 10 days		M. 9, small pox (natural) with typhus. 14 days		M. 44, delirium tremens .. 16 days	
M. 8 days, variola .. *		GREENWICH; West.		Intemperance:—	
M. 3, variola confluent (vaccinated 2 years ago without effect) .. 10 days		F. 2, small pox (after vaccination) .. 8 days		No deaths in the abstract of the week under this head.	
ST. PANCRA'S; Camden Town.		Syphilis:—		Privation; Want of Breast-milk; Purpura:—	
In Small Pox Hospital, M. 19, small pox semi-confluent, modified .. 13 days		M. 25, venereal disease—secondary symptoms .. *		No deaths under any of these heads.	
hospital fever—erysipelas. 5 days		M. 7 months, syphilis—stomatitis. from birth		Diarrhœa and Weaning:—	
vaccinated when young at Northampton —3 good cicatrices.		anasarca .. *		F. 6 weeks, diarrhœa—tabes from weaning .. *	
In Small Pox Hospital, F. 23, small pox, confluent, unprotected .. 13 days		M. 15 weeks, syphilis .. 4 days		Hæmorrhage, Hæmatemesis, &c.:—	
Regent's Park.		pneumonia .. *		F. 72, epistaxis—asthma .. 4 years	
M. 7, variola .. 14 days		F. 23, syphilis .. 6 months		F. 55, hæmatemesis .. 11 weeks	
HACKNEY; Hackney.		phthisis. 6 months		Gastritis and Hæmatemesis:—	
F. 7 months, small pox (vaccinated without effect). 8 days		Malformations:—		M. 68, gastritis, hæmatemesis, and melæna .. 1 month	
West.		F. 12 days, spina bifida, bursting, and terminating in convulsions. congenital		Miscellaneous Cases:—	
M. 17, small pox, confluent (imperfectly vaccinated when a child) .. 18 days		F. 4 days, spina bifida.		In Charing Cross Hospital, M. 34 (<i>post mort.</i>), aneurism of axillary artery. 2 years	
M. 2, confluent small pox (<i>not vaccinated</i>) .. 17 days		F. 9 days, cleft palate—inanition.		operation .. *	
STRAND; St. Anne, Westminster.		F. 12 hours, cleft palate—defective vitality.		death from hæmorrhage, after 6 weeks.	
M. 2, small pox (1st attack— <i>not vaccinated</i>) 9 days		Hernia:—		F. 1 (<i>inq.</i>), inflammation of the lungs progressing unchecked under the treatment of a mesmerist, not legally qualified to practise medicine .. *	
ST. LUKE; Whitecross-street.		M. 63, chronic pneumonia; irreducible inguinal hernia, with general decay, <i>whole illness</i> 3 yrs.		In Fever Hospital, M. 30 (<i>post mort.</i>), convalescent from typhus. 7 days	
F. 5, confluent small pox .. 12 days		F. 64, hernia strangulated .. *		phlebitis. 5 days	
(vaccinated when 3 months old.)		M. 63, hernia—anasarca .. *		laryngitis, pleuritis, lobular pneumonia. 16 days in hospital.	
BETHNAL GREEN; The Green.		F. 88, strangulated hernia .. 9 days		M. 26, old disease of heart .. *	
M. 2, small pox (<i>not vaccinated</i>) .. 10 days		Diabetes:—		hydrothorax .. 4 days	
WHITECHAPEL; Church.		No deaths in the abstract of the week under this head.		the fatal attack brought on by playing at cricket.	
F. 3, small pox (<i>not vaccinated</i>) .. 18 days		Stone:—		F. 41, malignant fungus—growth from the antrum into the mouth— <i>many years</i> in an incipient state—active about 5 months.	
ST. GEORGE IN THE EAST; St. John.		In Mile End Old Town Lower, M. 73, calculus vesicæ. 12 years		Note.—Mr. Gathercole, the Registrar for St. Nicholas, Deptford, states, that the deaths in his district during the last quarter, have been nearly double the average. Epidemic disorders have generally occurred in the most confined localities where there is an absence of all sewerage, and a great want of attention to the removal of accumulations of filth, and other deleterious matters. Scarlatina has been very prevalent throughout the district, but has not proved nearly so fatal in those parts where cleanliness is more attended to.	
F. 4, small pox (<i>not vaccinated</i>) .. *		Childbirth:—			
		The time elapsing from commencement of labour to death should invariably be returned.			
		F. 22, childbirth. 7 days			
		scarlatina .. 5 days			
		F. 29, puerperal peritonitis .. 6 days			
		F. 34, puerperal fever .. 10 days			
		F. 28, childbirth. 21 hours			
		puerperal fever .. *			
		F. 18, puerperal peritonitis .. 5 days			

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 1; disease of heart, 4; violence, 13; other specified causes, 6; "natural death," "visitation of God," "found dead," &c., 5.—TOTAL, 29 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 34.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 14th October, 1848.

Day.	Phases of the Moon	Mean height of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was overcast till 11h. a.m., one-half covered till 5h. p.m., generally clear till 8h. p.m., and overcast afterwards; cirrostratus, fleecy clouds, and scud.
MON.	Negative and very active at noon; frequent sparks and galvanic currents were shewn. Nothing was shewn at any other examination.	Slight breaks occurred in the clouds at 6h. a.m., and at 3h. p.m., the sky was otherwise overcast till 6h. p.m., and cloudless afterwards till midnight; cirrostratus, and scud. Rain was falling at intervals from noon till 6h. p.m.
TUES.	Nothing was shewn throughout the day.	The sky was generally one-half covered with cloud throughout the day; cirrostratus and scud. A shower of rain fell at 6h. p.m.
WED.	Positive, and tension strong at 9h. a.m., at 6 p.m. and at midnight. Nothing was shewn at any other examination.	The sky was three-fourths covered till 6h. a.m., generally overcast till 3h. p.m., and one-third covered afterwards; cirrostratus, fleecy clouds, and scud.
THURS.	Nothing was shewn throughout the day.	One-half of the sky was covered at 6h. a.m., overcast from this time till 6h. p.m., and clear afterwards; cirrostratus and scud.
FRID.	Nothing was shewn throughout the day.	One-third of the sky was generally covered till 3h. p.m., and it was overcast during the remainder of the day; cirrostratus and scud. Rain was falling occasionally during the evening.
SAT.	Nothing was shewn till noon. Positive and tension moderate from noon till 6h. p.m. Nothing was shewn afterwards.	The sky was overcast till 5h. p.m.; from this time till midnight the amount of cloud was very variable, at times the sky was wholly covered, and but partially at others; cirrostratus and scud. Rain was falling during the morning and afternoon.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1848.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 47.7; and the mean reading at 6h. p.m. was 52.8; the mean readings at the Royal Observatory for the same times were 47.1 and 51.6 respectively.

DEATHS registered in the Week ending Oct. 7th:—

Certified by Medical Attendant	940 cases.
Certified by Coroner	29 "
Without Medical Attendant	10 "
Not certified	26 "

TOTAL..... 1005

Deaths certified by Medical Attendants, and those in which Inquests were held, exhibit a proportion to the total number of 96 per cent.

Births and Deaths registered in London,
During the Week ending Saturday, October 21st, 1848.

FATAL CASES OF CHOLERA Registered in the Week ending Saturday the 21st.

(Ten are cases in which Inquests were held: the remainder are all reported to be certified by Medical Attendants, except one.)

- In Woolwich Arsenal (sub-district Greenwich) M. 50 years, a convict, "Asiatic cholera (29 hours' duration)." Inquest.
- In same sub-district, M. 53 years, a convict, "Asiatic cholera (52 hours' duration)." Inquest.
- In ——— M. 67 years, a convict, "Asiatic Cholera, (19 hours' duration)." Inquest.
- In ——— M. 62 years, a convict, "Asiatic cholera (100 hours' duration)." Inquest.
- In ——— M. 26 years, a convict, "Asiatic cholera (6 hours' duration)." Inquest.
- In ——— M. 25 years, a convict, "Asiatic cholera (4 days' duration)." Inquest.
- In ——— M. 23 years, a convict, "Asiatic cholera (4 days' duration)." Inquest.
- In Chelsea, North East, (sub-district) M. 15 years, "epidemic cholera (3 days' duration)." Inquest.
- In same sub-district, a boy 6 years, "epidemic cholera (9 hours' duration)." Inquest.
- In Islington, East (sub-district) son of a paper-stainer, 3 years, "cholera epidemica, (18 hours' duration)." Inquest.
- In Christchurch (sub-district) Marylebone, seaman, 22 years, "malignant cholera (2 days' duration)—secondary fever, (3 days)." Inquest.
- In Whitechapel, North (sub-district) seaman 43 years, "Asiatic cholera (3 days' duration)." Inquest.
- In Ratcliff, (sub-district) Stepney, on board a collier in the river Thames, M. 19 years, "diarrhoea (4 days' duration); Asiatic cholera (9 hours)." Inquest.
- In St. Paul's, Deptford, (sub-district) Greenwich, M. 66 years, "cholera Asiatica (17 hours' duration)." Inquest.
- In Islington, East (sub-district) a labourer, 15 years, "diarrhoea (5 days' duration) spasmodic cholera." Inquest.
- In same sub-district, a boy, 6 years, son of a patner stonebreaker, "Natural, with symptoms of spasmodic cholera (11 hours' duration); ill fed and poorly clothed." Inquest.
- In Goswell-street, Clerkenwell, F. 24 years, "Asiatic cholera (36 hours' duration)." Inquest.
- In Cripple-gate sub-district, M. 45 years, "Asiatic cholera (4 days' duration)." Inquest.
- In South-east sub-district, City of London, M. 27, "cholera Asiatica (12 hours' duration)." Inquest.
- In Aldgate sub-district, M. 50 years, "died by the visitation of God from Asiatic cholera (20 hours' duration)." Inquest.
- In St. Saviour's (sub-district) a boy 7 years, "Asiatic cholera (15½ hours' duration)." Inquest.
- In St. James, Bermondsey, M. 20 months, "Asiatic cholera (20 hours' duration)." Inquest.
- In same sub-district, M. 26 years, "Asiatic cholera (60 hours' duration)." Inquest.

- In Camberwell, a spinster 21 years, "spasmodic cholera (7 hours' duration)." Inquest.
- In same sub-district, a spinster 25 years, "spasmodic cholera (11 hours' duration)." Inquest.
- In same sub-district, widow of an Italian warehouseman, 42 years, "spasmodic cholera (13 hours' duration)." Inquest.
- In same sub-district, a widow 45 years, "spasmodic cholera (40 hours' duration)." Inquest.
- Note.—The above 4 cases occurred in Peckham House Lunatic Asylum.
- In Chelsea South (sub-district), F. 46 years, "cholera morbus (24 hours' duration)." Inquest.
- In same sub-district, a girl 10 years "cholera morbus (9 days' duration); fever consecutive, (7 days)." Inquest.
- In Islington West (sub-district) a labourer 40 years, a pauper in Islington work-house, "cholera Anglica (1 month's duration); dysentery (7 days)." Inquest.
- In St. Paul (sub-district), St. George in the East, a girl 10 years, "natural death by the visitation of God, viz., cholera (18 hours' duration)." Inquest.
- In Limehouse (sub-district) Stepney, M. 25 years, "cholera biliosa, cerebral congestion." Inquest.
- In St. Saviour's sub-district, F. 15 years, "anæmia (4 months' duration); diarrhoea (2½ days); spasms and cramp (24 hours)." Inquest.
- In Christchurch (sub-district) St. Saviour's, son of a weaver, 5 years, "destitution cholera, (12 hours' duration)." Inquest.
- In same sub-district, wife of a weaver, 36 years, "destitution, cholera (6 days' duration)." Inquest.
- In same sub-district, daughter of a weaver 3½ years, "destitution, cholera, (96 hours' duration)." Inquest.
- In same sub-district, daughter of a weaver 1½ year, "destitution, cholera (34 hours' duration)." Inquest.
- Note.—The above 4 cases occurred in Christchurch Workhouse, all of one family.
- In same sub-district, 59, John-st., daughter of a tinman, 8 years, "cholera (12 hours' duration)." Inquest.
- In the Leather Market sub-district, Bermondsey, M. 51 years, "cholera spasmodica (13½ hours' duration)." Inquest.
- In same sub-district, F. 35 years, "spasmodic cholera (46 hours' duration)." Inquest.
- In Kent-road (sub-district) St. George, Southwark, son of a harness-maker 21 months, at 5, Williams'-place, "cholera morbus (6 hours' duration)." Inquest.
- In Lambeth Church, 2nd part, sub-district, a waiter, at 61, Devonshire-street, aged 41 years, "cholera, accompanied with spasms, cramp, and hiccups, (attended 12 hours); disease existed 5 days." Inquest.
- In Battersea (sub-district) daughter of a carman at Nine Elms, aged 1 year and 8 months, "cholera (9 hours' duration)." Inquest.
- In Greenwich West sub-district, in Dreadnought Hospital ship, M. 39 years, "bronchitis (4 weeks' duration); cholera." Inquest.
- In St. George (sub-district), Camberwell, at 4, Thomas-street, Wyndham-road, wife of a fish-vender, 58 years, "spasmodic cholera (15 hours' duration)." Inquest.

(a) Mr. Rixon, the Registrar of the sub-district, Woolwich Arsenal, makes the following statement:—"The seven deaths from Asiatic Cholera, registered by me last week, occurred in the United Hospital Ship, among convicts from the "Justitia" hulk, lying off the Royal Arsenal wharf. The surgeon attributes the disease to the unhealthy state of the atmosphere and to the locality, a common sewer being in the immediate vicinity. The captain of the ship ascribes it to the rotten condition of the hulk, and to heat generated during the night by so many men being closely packed together, a ward having from ten to twenty four men sleeping in it, according to its size. The last two cases were of athletic young men, and lasted four days. The former patient was pulseless from the first and comatose during four hours previous to death—the latter was sensible to the last. They were carefully attended to, visited every hour night and day; and were treated with mercury, mustard poultices, stimulants, and all the usual remedies. The whole of the convicts were removed yesterday (the 20th instant) from the "Justitia," and put on board the "Hebe" and "Sulphur" receiving vessels, opposite the Royal Dockyard; which arrangement, I find, has created some alarm in the yard. This morning (Saturday) a rigger was taken home from the Dockyard very ill, and afterwards a shipwright, and both cases are pronounced by the surgeons as decided cholera. Otherwise, the town remains free. Scarlatina is still very prevalent."

(b) Mr. Smith, the Registrar of the north-east sub-district of Chelsea, states that "the two boys belonged to the same family. The elder was employed on board a lighter at Isleworth, and had eaten heartily of mussels on the day before the attack. Finding himself ill, he returned home under heavy rain which wetted him to the skin. His parents, who are in poor circumstances, procured medical aid, but were not able to provide the comforts necessary for his case; and to the want of these, the surgeon thinks; is principally owing the fatal termination. The younger was constantly in the room during his brother's illness, but was not acized till after his death. His illness is attributed by the medical attendant not merely to contagion, but to miasma generated in a badly ventilated and comfortless apartment, and increased by the presence of a sick person."

(c) Mr. Butterfield, the Registrar of east sub-district of Islington, states that "the boy who resided at 15, Lower Queen-street, New North Road, was taken ill at half-past six a.m., with rigors, bilious vomiting, and purging with rice-coloured evacuations, and all the symptoms of true cholera. Medical advice was not obtained till half-past twelve, when it did not avail. The patient died at half past one, a.m., on Saturday, after an illness of 18 hours. Miasma issuing from an open, offensive drain in the backyard, seemed to be the primary cause." Dr. Kossy, who attended the above, had another decided case in an adult, which has not been fatal.

(d) Mr. Obré, the Registrar states that the deceased was a seaman who had arrived from Sunderland, in the brig "Marsden," on the 10th: had febrile symptoms with diarrhoea till the 13th, when he removed to Lissou Grove. These symptoms continued till the 15th, when the choleraic poison showed itself, and he died on the 17th. Dr. Miller adds, that "the patient was brought home on Friday evening in a state of collapse, and died of "Asiatic Cholera," in the state of secondary fever."

(e) Mr. Chapman, the Registrar, states that "this sailor was brought from a lodging-house, No. 118, Rosemary-lane, to the Whitechapel Workhouse, on the 16th October, and died on the 18th. It appears he had not been many days from on board ship."

(f) Mr. Wells, the Registrar of Ratcliff, mentions that "besides the above case, he had three others, (one English, two Asiatic), on which inquests had been held; but they were not yet registered as he had not obtained the coroner's signature. The four cases occurred on board colliers in the Thames."

(g) Mr. Marchant, the Registrar of St. Paul's Deptford, states that "this person resided in a very healthy, airy situation, and was of steady habits; by trade a carpenter, but only working at his trade occasionally, having other resources. He ate a hearty dinner of boiled mutton, spinach and potatoes, on the day previous to that on which he died."

(h) Mr. Butterfield, the Registrar, states that "these two were brothers, and died in Ward's Place, a close confined, badly ventilated place, off the Lower Road."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 41.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 21st. The following selection of cases is made from the Returns for the week ending Oct. 14th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Hanging:—	duration
F. 45, injuries to the head, caused by an accidental fall down a flight of stairs	*	M. 40, cut his throat in a temporary state of insanity	*	M. 36, hanged himself in a temporary state of insanity	*
F. 63, exhaustion from the shock caused to her nervous system, by a fall producing fracture of five ribs, during a quarrel with a fellow pauper	2 weeks	M. 56 (no inquest), extensive laceration of the whole of fingers and the thumb	18 days		
M. 6, accidental fall from a pile of bricks, and blow on the head	3 days	(Placed to tetanus in abstract. Query—Lacerated by what means?)	3 days	Burns and Scalds:—	
Spinst. 60, compound fracture of right knee, from being accidentally crushed by the wheels of a waggon	*	Drowning:—		M. 2, scalded by upsetting a bason with boiling starch on his right breast	36 hours
Wounds:—		M. 13, found dead—apparently drowned.		F. 2 (no inq.), scald over the chest	1 month
Assistant at the British Museum, 52, suicide by cutting his throat with a razor, while insane	*	F. (age unknown) found dead—apparently drowned, with marks of violence.		Poison:—	
M. 6, death from the bite of a dog, acting on a previously diseased system	*	M. apparently 35 (unknown person), found dead in the Thames, without marks of violence.		Widow of a coachman, 41, essential oil of almonds—suicide when insane.	
		Son of a labourer, 14, drowned by falling out of a boat into the Commercial Dock accidentally (in water 10 minutes.)		In Guy's Hospital, M. 38 (no inq.), animal poison—farcinoma	*

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Childbirth:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		CLERKENWELL; St. James.		The time elapsing from commencement of labour to death should invariably be returned.	
KENSINGTON; Fulham.		M. 3 months, confluent small pox (not vaccinated)	6 weeks	F. 30, typho-pneumonia succeeding delivery at the full time	14 days
M. 20, small pox	*	ST. LUKE; Finsbury.		F. 29, childbirth	24 days
St. Pauls, Hammersmith.		F. 1, small pox (not vaccinated)	*	inflammation of leg and thigh	17 days
M. 37, variola (vaccinated)	7 days	CITY OF LONDON; South-west.		purulent deposits—extensive abscess of leg and thigh—exhaustion from fever.	
CHELSEA; South.		F. 2, small pox (natural)	*	F. 33, puerperal peritonitis	3 days
M. 2, variola confuent (not vaccinated)	1 week	BETHNAL GREEN; Town.		F. 43, puerperal peritonitis	5 days
North-west.		F. 24, variola (not vaccinated)	12 days	F. 33, puerperal peritonitis	3 days
M. 35, small pox confluent	13 days	STEPNEY; Shadwell and Wapping.		F. 30, puerperal peritonitis	*
ST. GEORGE, HANOVER-SQUARE; Belgrave.		M. 1, small pox (not vaccinated)	10 days	F. 36, childbirth	11 days
F. 3, small pox	3 weeks	Mile End, Old Town (Lower).		puerperal fever	10 days
cancerum oris		M. 2, small pox (1st attack—not vaccinated). 7 days		F. 40, childbirth	4 days
vaccinated a week before small pox appeared, without effect,		M. 9 months, small pox (1st attack—not vaccinated)	11 days	puerperal fever—peritonitis	36 hours
WESTMINSTER; St. John the Evangelist.		ST. GEORGE, SOUTHWARK; Kent-road.		F. 22, puerperal convulsions	1 day
M. 6, variola (not vaccinated)	2 weeks	M. 4, small pox (vaccinated)	6 days	F. 36, (ing.), puerperal convulsions at the full term of pregnancy	11 hours
M. 3, variola (not vaccinated)	15 days	F. 2, small pox (vaccinated)	*	F. 37, childbirth	3 weeks
F. 7 months, variola confuent (not vaccinated) 9 days		Borough-road.		mania	9 days
F. 8, variola confuent (vaccination doubtful) 13 days		M. 1, small pox (not vaccinated)	3 days	F. 21 (post. mort.), childbirth	9 weeks
F. 2, variola (not vaccinated)	8 days	LAMBETH; Waterloo (1st part).		phlegmasia dolens	60 days
F. 6 months, variola—pneumonia (not vaccin.) 7 days		F. 48, small pox (not vaccinated)	*	pleurisy	4 days
St. Margaret.		Waterloo (second part).		Other cases of Parturition (See Small Pox cases):—	
M. 3, small pox	9 days	M. 1, variola	*	F. 28, fever	*
M. 5, variola	*	Lambeth Church (second part.)		abortion	6 weeks
M. under 1, variola (not vaccinated)	1 month	F. 7, small pox (not vaccinated)	14 days	enteritis	*
pneumonia	some days	F. 6, small pox	9 days	F. 27, childbirth	6 days
F. 2, small pox (not vaccinated)	2 weeks	pneumonia	2 days	fatal syncope from cardiac disease, 6 hours after delivery.	
ST. MARTIN-IN-THE FIELDS; Long Acre.		vaccinated twice or thrice without effect.		Delirium Tremens:—	
F. 6 months, small pox	8 days	Chicken Pox:—		M. 35, delirium tremens	*
ST. MARYLEBONE; The Rectory.		In Islington (West) M. 1, pertussis	*	F. 65, delirium tremens	1 week
F. 3 months (ing.), natural small pox	*	varicella	2 months	Intemperance:—	
ST. PANCRAS; Gray's Inn-lane.		Syphilis:—		F. 47, inebriety	2 years
M. 1, small pox (not vaccinated)	7 days	M. 7 weeks, syphilis	from birth	anasarca	2 weeks
Camden Town.		M. 9 weeks, syphilis	from birth	pneumonia	4 days
The following 12 cases occurred in the Small Pox Hospital:—		Malformations:—		Privation:—	
M. 21, small pox, confluent (unprotected)	10 days	M. 1 month, spina bifida.		In St. John's, Horselydown, F. 7, want of food, and exposure to the weather	*
M. 3 months, small pox, confluent (unprotected) 8 days		M. 4 days, rectum imperforatum.		febris continua	6 days
M. 25, small pox confluent	15 days	M. 1 hour (post. mort.), congenital malformation—deficiency of diaphragm.		In same sub-district, F. 8, want of proper nourishment, dirt, &c.	5 days
said to have been vaccinated when 5 years old at Birmingham by a clergyman—one imperfect cicatrix.		M. 8 months, malformation of brain.		febris continua	*
M. 20, small pox confluent (unprotected)	11 days	convulsions	6 hours	In Kent-road (sub-district), M. 58, exhaustion from want—chronic bronchitis	*
F. 26, small pox confluent (unprotected)	10 days	M. 1 month, malformation.		Want of Breast-milk:—	
F. 24, small pox confluent (unmodified)	9 days	Hernia:—		M. 6 weeks, debility	1 week
1 good cicatrix—confinement 10 days—vaccinated when young at Meton, Leicestershire.		In University College Hospital, F. 48 (p.m.), femoral hernia strangulated	3 days	brought up by hand (no medical attendant.)	*
M. 1 week, small pox confluent (unprotected) 7 days		operation—sloughing of intestines—peritonitis	*	M. 11 weeks, atrophy—dry nursed	*
This was the child of the former, who was confined in the Hospital, and died two days before the infant.		In University College Hospital, F. 40 (p.m.), femoral hernia	10 days	Bronchitis and Want of Milk:—	
M. 17, small pox confluent (unprotected)	14 days	strangulated	17 hours	F. 8 months, bronchitis	9 days
M. 27, small pox, confluent laryngeal	19 days	operation—peritonitis	*	brought up by hand—under treatment 2 days.	
said to have been vaccinated when young at Ensham—no cicatrix.		In London Hospital, M. 30 (p.m.), hernia, operation	13 days	Purpura:—	
M. 35, small pox confluent	14 days	ulceration of the intestines	*	F. 36, purpura hæmorrhagica	*
vaccinated when young at Tunbridge Wells—no imperfect cicatrix.		In London Hospital, M. 28, hernia, operation, 3 days		Hæmorrhage, Hæmatemesis, &c.:—	
M. 7, small pox confluent (unprotected)—pectechial	8 days	peritonitis	*	M. 48, hæmatemesis	4 days
F. 21, small pox confluent (unprotected)	22 days	Diabetes:—		F. 25, hæmatemesis	3 weeks
hospital gangrene.		F. 20, diabetes	3 months	cerebral effusion	1 week
HACKNEY; South.		F. 57, diabetes	several years	F. 72, rupture of a blood vessel of the lungs	*
M. 10, confluent small pox	8 days	Bright's disease of the kidney	9 months	M. 62, loss of blood from the lungs, produced by natural disease—found dead.	
vaccinated with effect about 9 years before eruption.		F. 50, diabetes	18 months	Miscellaneous Cases:—	
ST. GILES AND ST. GEORGE; North.		fever	10 days	F. 2, scarlatina	*
M. 9, variola (not vaccinated)	14 days	Scirrhus and Diabetes:—		cynanche maligna	16 days

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 2; disease of heart, 1; Asiatic cholera, 5; small pox, 1; childbirth, 1; violence, 15; other specified causes, 3; "found dead," "natural death," "visitation of God," &c., 11.—TOTAL, 39 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 40.

With reference to six deaths from small pox, registered in the sub-district of St. John the Evangelist, Mr. Pearse, the Registrar, has ascertained, that in four cases vaccination was omitted from neglect, in one from prejudice, and in one from the unsound state of the mother's mind. In the house where one of the deaths occurred two other children were attacked, but not fatally; neither of whom had been vaccinated, owing to prejudice. Two houses where deaths had occurred contained each an additional case—one of convalescence, the other expected to prove fatal. There are also four families with 15 or 16 children in all, many of whom have not received the benefit of vaccination. With reference to six deaths in the same sub-district, from scarlatina, one house which had been visited fatally contained four cases, now convalescent; another house where a death occurred had contained other three cases, of which one proved fatal three weeks ago; the remaining two are in the way of recovery. The latter house was rebuilt two years ago, but the drainage is so bad, that water occasionally rises to the height of a man's waist. A third house had three cases, of which one has been registered as fatal. A fourth has now one case convalescent, where one of the six deaths occurred. And in a fifth, where one of the fatal cases occurred, there was another convalescent.

Mr. Seagrave, the Registrar of Trinity, St. Mary, Newington, records three deaths from scarlatina maligna, which occurred at a house, No. 3, Charles-street, New Kent-road, within 24 hours. All the children of the family were thus carried off.

In Goswell-street (sub-district), Clerkenwell, a boy and girl died of "fever," according to medical certificate. Mr. Burrows, the Registrar, states, that he had been informed they were cases of typhus. In the girl's case, decomposition proceeded rapidly after death, and in spite of all remonstrance, the body was allowed to remain exposed for seven days in a very small room, inhabited by seven persons both day and night. The parish authorities declined to interfere in the matter, stating, that they had no power to compel the parties to bury the dead, or even to close the coffin.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 21st October, 1848.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Negative and moderately active during the morning. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling from 9h. a.m. till 3h. 10m. p.m.
MON.	Nothing was shewn throughout the day.	The clouds were slightly broken at 3h. p.m., the sky was otherwise overcast throughout the day; cirrostratus and scud. Rain was falling at noon.
TUES.	Nothing was shewn throughout the day.	With the exception of a small break in the clouds at 9h. a.m. the sky was overcast throughout the day; cirrostratus and scud. Rain was falling between noon and 3h. p.m.
WED.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Light snow was falling between 8h. and 9h. a.m., and a few drops of rain at 6h. p.m. An aurora at night and the magnets were disturbed.
THURS.	Nothing was shewn throughout the day.	Three-fourths of the sky were covered till 9h. a.m., and overcast from this time till near noon. At noon one-half of the sky was covered, overcast till 7h. p.m., generally clear till 8h. 30m. p.m., and overcast till midnight; cumuli, cirrostratus and scud.
FRID.	Negative with moderate tension at midnight. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling generally.
SAT.	Positive, and tension strong at 11h. 30m. a.m. and weak at midnight. Nothing was shewn at any other time.	The sky was overcast till 7h. 30m. p.m. and generally clear afterwards; cirrostratus and scud. Rain was falling steadily during the morning.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1845, December 31.—See *Phil. Trans.* Part 1, 1846.

In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower;" than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 43.2; and the mean reading at 6h. p.m. was 47.1; the mean readings at the Royal Observatory for the same times were 42.5 and 45.5 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, October 28th, 1848.

TO MEDICAL INFORMANTS.

As cholera often commences with diarrhœa, and is sometimes followed by fever, the MEDICAL ATTENDANTS are requested to notice these particulars in their certificates. The following are two examples of returns properly filled up. The time after "diarrhœa," is the time intervening between the first symptoms of diarrhœa and the patient's death; the time after "cholera," is the time from the first appearance of the characteristic symptoms of cholera to death; the time after "fever," is the time from the appearance of fever to the death:—

Diarrhœa 5 days
Cholera 22 hours
[diarrhœa commencing 5 days before death, is understood.]

Diarrhœa 13 days
Cholera 10 days
Fever 7 days
[that the whole illness was 13 days and under 14, is understood.]

The time against diarrhœa includes the whole term of illness; the difference between 13 and 10 (or 3 days) is the duration of the simple diarrhœa. Fractions of hours or days need not be inserted: by "6 hours" will be understood, 6 and less than 7 hours; by "6 days" will be understood, 6 and less than 7 days. Attention to all these points is absolutely necessary in order to insure uniformity and accuracy in the abstracts.

FATAL CASES OF CHOLERA Registered in the Week ending Saturday the 28th.

(Five are cases in which Inquests were held: the remainder are all reported to be certified by Medical Attendants, except one.)

KENSINGTON; Fulham.

Girl, 2½ years, "cholera (8 hours' duration)."

WESTMINSTER; St. John the Evangelist.

- * M. 50 years, "Asiatic cholera (12 hours' duration)." Inquest.
- * M. 24 years, "Asiatic cholera (7½ hours' duration)." Inquest.
- * M. 34 years, "Asiatic cholera (3½ hours' duration)." Inquest.

PANCRAS; Gray's-inn-lane.

M. 49 years, "cholera (2 days' and 1 night's duration)."

SHOREDITCH; Haggerstone, West.

Boy, 2 years 10 months, "spasmodic cholera."

BETHNAL GREEN; The Green.

M. 33 years, "diarrhœa (1 day's duration,) Asiatic cholera (12 hours)."

WHITECHAPEL; Whitechapel Church.

In London Hospital, M. 44 years, post. mort., "diarrhœa (5 days' duration) Asiatic cholera (24 hours)."

ST. GEORGE IN THE EAST; Saint Paul.

F. 39 years, "typhus consequent on cholera (5 days' duration)."

Mr. Chatwood, the Registrar, states, that "The deceased was mother of the child registered by him last week as having died in 18 hours of cholera. Her illness was probably caused by fear and grief."

STEPNEY; Mile End, Old Town (Upper).

M. 14 years, "cholera (4 days' duration)."

ST. SAVIOUR, SOUTHWARK; Christ Church.

Labourer, 32 years, at Running Horses Livery Stables, "cholera (7 days' duration)."

ST. OLAVE, SOUTHWARK; St. Olave and St. Thomas.

† Labourer, 19 years, Oct. 21st, at 3, Tattle Court, "Asiatic cholera (12 hours' duration)."

† Son of a labourer, 14 years, Oct. 25th, at 3, Tattle Court, "Asiatic cholera (12 hours' duration)."

† Daughter of a labourer, 5 years, Oct. 20th, at 3, Tattle Court, "Asiatic cholera (6 hours' duration)."

BERMONDSEY; Leather Market.

M. 26 years, "Asiatic cholera, (14 hours' duration)."

BERMONDSEY; St. James.

Girl, 4 years, "Asiatic cholera, (36 hours' duration)."

Girl, 2 years and nine months, "cholera, (10 hours' duration)." No medical attendant.

ST. GEORGE, SOUTHWARK; Kent Road.

Son of a harness-maker, 9 years, at No. 5, William's-place, "cholera, terminating in low fever."

The Borough Road.

Girl, 5 years, "cholera Anglica, (36 hours' duration)."

NEWINGTON; St. Mary.

M. 58 years, "cholera, (11 hours' duration)."

F. 25 years, "Asiatic cholera, (18 hours' duration)."

This case was seen by the medical attendant at one o'clock in a state of collapse, blue skin, partial cramps, rice-water evacuations, and vomiting. The patient died at 6 o'clock.

Trinity.

At 185, Kent-street, F. 34 years, "calculus of kidneys and bladder, (3 years' duration), cholera, (3 days)."

LAMBETH; Kennington, second part.

Spinster, 30 years, at 6, Baker-street, North Brixton, "cholera Asiatica, (36 hours' duration)." She worked in a garden.

Widow, 34 years, at 6 Baker-street, North Brixton, "malignant Asiatic cholera, (16 hours' duration)."

CAMBERWELL; Camberwell.

Spinster in Peckham-house Lunatic Asylum, 18 years, "spasmodic cholera, (54 hours' duration)."

ROTHERHITHE; Rotherhithe.

Boy, 2 years, "cholera, (2½ days' duration)."

Girl, 4 years, "cholera, (7 days' duration)."

F. 45 years, "Asiatic cholera, (27 hours' duration)."

GREENWICH; Greenwich West.

In the Dreadnought Hospital, M. 50 years, "cholera, (4 days' duration)."

In ——— M. 19 years, "cholera, (5 days' duration)."

In ——— M. 33 years, "cholera, (1 week's duration)."

Woolwich Dockyard.

† M. 31 years, "malignant, or Asiatic cholera, (21 hours' duration)."

† M. 30 years, a convict, "Asiatic cholera, (22 hours' duration)." Inquest.

† M. 44 years, a convict, "Asiatic cholera," Inquest.

* Note by Mr. Pearce, the Registrar:—The above three cases of cholera were those of prisoners in the Millbank Prison; and are given upon the authority of Dr. Baly, the resident Physician. They were attacked in the same quarter without any communication between the cells. The first was in perfect health, the second had slight diarrhœa for two days previous, of which he had not complained; the two had been in the Establishment between 6 and 7 months. The third person had also suffered for two days from diarrhœa with feverishness, for which he was under treatment. He had been in the Establishment 20 days. Two other cases had occurred and had been relieved.

† Note by Mr. Stainer, the Registrar:—The above three deaths (two in one family) from Asiatic cholera, occurred in one house in a court occupied principally by Irish. Another of the family is dangerously ill from the same disease; but I have not heard of any other cases in the same court, nor indeed in the whole of my district.

‡ Mr. Nokes, Registrar of this sub-district, states that "out of four convicts who died during the week, only two died from cholera, shewing a considerable decrease on the last return. The first death from cholera is that of a rigger, at No. 62, King-street; he was one of the men employed in the removal of convicts from the Arsenal to the Dock Yard, and is said to have been a man of intemperate habits. Since the removal of the convicts from the Arsenal to the Dock Yard, the state of the bulks is satisfactory. Only one new case has occurred. When a person is seized, he is immediately placed in a warm bath, which is kept in readiness, and nurses are employed to rub the limbs of the patient. No time is lost in administering the medicine. This treatment has been attended with the best results. Scarlet fever is prevalent in the town, but few cases terminate fatally."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 42.

(The tabular abstract on the first page is for the week ending Saturday, Oct. 28th. The following selection of cases is made from the Returns for the week ending Oct. 21st.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns and Scalds:—	duration
M. 48 (post. mort.), effusion of blood on the brain, either by falls or blows—how caused no sufficient evidence	7 days	Surgeon, about 36 (post mort., no inq.), punctured wound of finger, in post mortem examination	12 days	Daughter of an ironmouger, 5, (no inq.), extensive burn, by clothes accidentally taking fire	2 days
M. 12, irritative fever, produced by an abscess behind his right ear, from a blow	1 month	inflammation and purulent deposit in cellular tissue of neck, axilla and left side	*	effusion on the brain	30 hours
In Dreadnought Hospital Ship, M. 19 (no inq.), abscess and necrosis of ribs from a fall, about 11 mon. operation	*	Drowning:—		Daughter of a mariner, 2, scalds from the accidental upsetting of a cup of boiling tea	*
pleurisy and empyema of right side	44 days	F. about 20 (dressed as a servant), drowned—suicide—state of mind unknown.		Daughter of a cigar-maker, 2, scalds from the accidental fall of a cup of coffee	6 days
In Westminster Hospital, waggoner, 54, pneumonia, from fracture of the jaws by the kick of a horse, in a stable at Buckingham cottages	8 days	F. 28, drowning.		M. 1, scalded by the upsetting of a tea-pot with hot water	4 hours
F. 90 (no inq.), fracture of cervix femoris.	*	Suffocation:—		Cancer from Injury:—	
guceral break up.		M. 9 weeks, accidentally suffocated in bed.		F. 51 (no inq.), carcinoma of uterus, bladder, and rectum, attributed to a lacerated wound, 22 years ago.	

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Other cases of Childbirth, with various Diseases:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		BERMONDSEY; The Leather Market.		F. 27 (p.m.), typhus with suppuration of left ovary	*
CHELSEA; South.		F. 5, variola (natural)	*	severe and protracted labour, 4 weeks previously.	
F. 5, variola confluens (not vaccinated)	2 weeks	NEWINGTON; St. Mary.		F. 34 (post mort.), hypertrophy of the glands of mesocolon, producing obstruction (the severe symptoms during pregnancy)	long standing
F. under 1, small pox	10 days	M. 2, small pox	9 days	abortion (4th month)	17 hours
WESTMINSTER; St. John the Evangelist.		LAMBETH; Church (1st part).		F. 27, phthisis	many months
M. 2, variola	9 days	F. 11 months, variola	10 days	childbirth	12 hours
(not vaccinated—no medical aid.)		GREENWICH; Woolwich Arsenal.		F. 28, diseased liver	of old standing
M. 26, variola (not vaccinated)	14 days	M. 19, scarlatina	*	childbirth	14 days
F. 10, variola confluens (not vaccinated)	5 days	small pox (not vaccinated)	25 days	Delirium Tremens:—	
F. 3, variola (not vaccinated)	11 days	LEWISHAM; Lee.		M. 26, delirium tremens	8 days
St. Margaret.		F. 8, confluent small pox	9 days	apoplexy	1 day
M. under 1, small pox (natural)	17 days	Syphilis:—		F. 53, delirium tremens	7 weeks
vaccinated at 3 months without effect.		M. 32, erysipelas of head and face	5 days	Intemperance:—	
F. 3, small pox (not vaccinated)	*	syphilitic secondary symptoms	8 days	No deaths in the abstract of the week under this head.	
St. MARYLEBONE; All Souls.		M. 5 months, secondary syphilis	from birth	Privation; Want of Breast-milk, &c.:—	
M. 11 days, variola	from birth	M. 5 weeks, syphilis	*	F. 5 weeks, atrophy from dry-nursing	*
St. PANCRAS; Camden Town.		Malformations:—		F. 6 months, atrophy	about 1 month
F. 37, small pox confluent	10 days	M. 5 months, cyanosis	from birth	dry-nursed.	
vaccinated when 7 years old at Enfield.		M. 4 days (post. mort.), affection of the heart.	a few days	M. 5 months, atrophy from want of breast-milk (no medical attendant)	3 months
gangrene—uo cicatrix.		foramen ovale not closing.		F. 2 months, marasmus—no breast-milk from birth.	
STRAND; St. Mary.		M. 23 days, malformation.		See four cases of destitution in the cholera cases of the week.	
F. 9 months, small pox (not vaccinated)	*	M. 5 days, imperforate intestine.		Purpura and Scurvy:—	
St. LUKE; Finsbury.		Hernia:—		M. 2, scorbutus	*
M. 5, small pox (not vaccinated)	*	In University College Hospital, M. 38 (p.m.), strangulated hernia	*	M. 9 days, gastric irritation—purpura	4 days
Whitecross-street.		operation	36 hours	Hæmorrhage, Hæmatemesis, &c.:—	
M. 1, small pox	6 days	peritonitis	3 days	M. 57, hæmorrhage from lungs	24 hours
EAST LONDON; St. Botolph.		In St. Bartholomew's Hospital, F. 49 (p.m.), hernia—operation—peritonitis	*	F. 47, hæmatemesis	*
F. 26, petechial small pox	10 days	Diabetes:—		M. 16, melena	31 days
1st attack—vaccinated with effect several years ago.		F. 52, diabetes	4 months	M. 62, hæmorrhagia intestinalis—debility	19 weeks
SHOREDITCH; Hoxton Old Town.		Stone:—		M. 52 (post mort.), internal hæmorrhage from spermatic vein	2 days
F. 21, variola (vaccinated with effect)	11 days	No deaths in the abstract of the week under this head.		F. 16 days, hæmorrhage from the umbilicus	11 hours
Holywell and Moorfields.		Childbirth:—		Phthisis and Hæmorrhage:—	
F. 1, small pox (not vaccinated)	14 days	The time elapsing from commencement of labour to death should invariably be returned.		M. 34 (inq.), natural death—sudden rupture of a blood-vessel of thorax	15 mins.
St. GEORGE IN THE EAST; St. Mary.		F. 28, uterine inflammation	5 days after delivery	under consumption.	
M. 3, small pox—vaccinated with effect at the age of 4 months.		F. 25, puerperal fever	11 days	Hepatitis; Hæmatemesis:—	
St. SAVIOUR; St. Saviour.		F. 34, puerperal mania	14 days	F. 51, hepatitis—hæmatemesis	*
M. 2, variola	13 days	child born on 29th September.		Miscellaneous Cases:—	
M. 5, small pox	20 days	F. 23, puerperal fever	4 days	F. 53, apparently depression of nervous system, from shock occasioned by the accidental death of her husband, ill	5 days
Christchurch.		a week after delivery.		M. 43 (post mort.), stricture of urethra—poisoning from urea	*
F. 7 months, small pox	*	F. 33, diarrhoea	8 days		
(not vaccinated) no medical attendant.		peritonitis	7 days		
St. OLAVE; St. Olave and St. Thomas.		beginning 3 days after delivery of dead child by midwife.			
F. 1, variola (not vaccinated)	10 days				

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 1; cholera, 10; violence, 9; other specified causes, 3; "found dead," "natural death," "visitation of God," &c., 4.—TOTAL, 27 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 39.

Dr. Bachhoffner, Registrar of St. John's sub-district of Marylebone, makes the following statement:—"Two children are registered this week who died of scarlatina, at No. 20, Richmond-street. This house has been divided, and now consists of two small shops, with four rooms above either, which are occupied by 31 persons. In the back yard four small cottages have been erected, inhabited by 17 persons, making in all 48. At the back of the house are two open privies, opposite the doors of the cottages, and used by all the occupants. The drain runs under the back rooms of the shops, and the smell is so offensive, that the inmates are frequently quite unable to remain in their houses; while the skylight, through which chiefly the light is admitted, cannot be opened for the purpose of ventilation. A cellar in front of the house, is always more or less charged with stagnant mud and water, from which at times a most offensive smell is given off. Scarlatina has for some weeks been very prevalent in this and the adjoining streets. My informant, who occupies one of the shops, has lost two children mentioned above, and on September 23d, and October 11th, two other deaths occurred there from the same cause."

Mr. Butterfield, Registrar of Islington East, states that, "according to informant of the death of an infant from diarrhoea, after an illness of 4 days, the disease was caused by a privy on the premises, which has been full for years, though connected with a badly constructed drain, which only carries off the offensive matter when it arrives at a certain height. They are obliged to carry the soil to an opening in the drain."

The following case of cholera in the Dreadnought, was registered in the week ending Oct. 21st, and may be added to the list for that week:—M. 28, "dysentery (about 2 years), pleurisy and hydrothorax (duration uncertain)—cholera."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 28th October, 1848.

Day.	Phases of the Moon	Mean readings of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.) DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was overcast till 2h. p.m.; at times it was occasionally clear, and at others about one-half covered during the remainder of the day; cirrostratus and scud. Showers of rain were falling between noon and 2h. p.m. Auroral streamers were observed between 11h. p.m. and midnight; the magnets were disturbed.
MON.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling generally.
TUES.	Nothing was shewn throughout the day.	The sky was nearly overcast till 6h. a.m., one-half covered till noon, and overcast afterwards; cumuli, cirrostrati, and scud. Rain was falling from 10h. 30m. p.m. till midnight. At 2h. 30m. p.m. a solar halo of 22½° radius was observed.
WED.	Nothing was shewn throughout the day.	The sky was overcast till 9h. a.m.; the amount of cloud from this time till 6h. p.m. was variable, and clear generally till midnight; cumuli, nimbi, cirrostrati, fleecy clouds, and scud. Rain was falling between 0h. a.m. and 6h. a.m. Strong auroral light was visible in the N.E. and N.N.E. between 6h. and 8h. 30m. p.m.; some faint streamers were shewn, and the magnets were much disturbed. Several flashes of lightning were seen in the S. between 8h. and 10h. p.m.
THURS.	Nothing was shewn throughout the day.	At noon one-half of the sky was covered, and from 11h. p.m. till midnight three-fourths were covered; the sky, at other times, was generally cloudless; cumuli, fleecy clouds, and scud.
FRID.	Nothing was shewn throughout the day.	The sky was overcast till 2h. p.m., and the amount of cloud was variable during the remainder of the day; cirrostratus and scud. Rain was falling heavily from 8h. a.m. till 2h. 30m. p.m., and a shower fell at 11h. p.m.
SAT.	Nothing was shewn throughout the day.	The sky was generally clear till 9h. a.m., and the amount of cloud was variable throughout the remainder of the day; cirrostratus and scud. Heavy showers of rain were falling frequently.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans. Part 1, 1846.*

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans. Part 1, 1848.*

* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 49.7; and the mean reading at 6h. p.m. was 52.3; the mean readings at the Royal Observatory for the same times were 49.8 and 51.2 respectively.

† This reading was inferred.

From October 17 to the present time, October 30, the magnetic instruments have almost always been under some cause of disturbance, and particularly so on the 17th, 18th, 19th, 23rd, and 24th, and slightly on the 21st, and 22nd, and to a moderate extent on the remaining days.

Births and Deaths registered in London,
During the Week ending Saturday, November 4th, 1848.

FATAL CASES OF CHOLERA Registered in the Week ending Saturday the 4th.

Five are cases in which Inquests were held: the remainder are all reported to be certified by Medical Attendants.)

CHELSEA; Chelsea, South.
M. 67 years, (post mort.), "cholera (10 hours)."
ST. JAMES, WESTMINSTER; Berwick Street.
Spiuster, 22 years, at 57, Rupert Street, (a modern and well built house with good sewerage,) "cholera (22 hours)." The patient complained of being unwell on the day previous.
HACKNEY; Stamford Hill.
* Girl, 3 years, "diarrhoea (7 days) Asiatic cholera (3 days)."
SHOREDITCH; Haggerstone, East.
F. 40 years, "bilious cholera (5 days) exhaustion."
STEPNEY; Shadwell and Wapping.
† Coalwhipper, 34 years, "natural death, visitation of God," sudden from diarrhoea and cramps." Inquest.
† Mariner, 67 years, "natural death from cholera." Inquest.
† These returns are unsatisfactory. The exact duration of the cases is not stated in this coroner's returns.
ST. SAVIOUR, SOUTHWARK; St. Saviour.
M. 23 years, "cholera (12 hours)."
F. 28 years, "natural death, Asiatic cholera (20 hours)." Inquest.
ST. OLAVE, SOUTHWARK; St. Olave.
In St. Thomas's Hospital, from 3, Tattle-court, son of a labourer, 11 years, "cholera (5 days)," died on 28th October.
At 1, Bell's Rents, son of a labourer, 2 years, "Asiatic cholera (7 hours)," died on 2nd November.
At 10, Webb's-street, F. 29 years, "cholera maligna (24 hours)," on 29th October.
St. John.
† M. 5 years, "Asiatic cholera (20 hours)."
† M. 10 years, "Asiatic cholera (19½ hours)."
BERMONDSEY; Leather Market.
F. 8 years, "Asiatic cholera."
St. Mary, Magdalen.
M. 66 years, "Asiatic cholera (36 hours)."
M. 8 years, "Asiatic cholera (22 hours)."
F. 35 years, "Asiatic cholera (24 hours)."
F. 2 years, "English cholera (8 days) exhaustion."
St. James.
F. 43 years, "cholera (3 days) cerebral and hepatic congestion:—partial coma (7 days)."
F. 45 years, "diarrhoea (12 hours), cholera (48 hours), fever (3 days)."
ST. GEORGE, SOUTHWARK; Kent-road.
At 1, George's-place, a baker, 38 years, "Asiatic cholera (13 hours)."
At 125, Kent-street, a labourer, 35 years, "spasmodic cholera (16 hours)."
At 9, George's-court, son of a labourer, 7 years, "Asiatic cholera, (15 hours)."
Girl, 9 years, "English cholera."
At 2, Regent-street, wife of a hutch, 42 years, "Asiatic cholera, (20 hours)."
At 10, Henry-street, wife of a shoe-maker, 30 years, "Asiatic cholera, (6 days)."
At 17, Collier's-rents, wife of a labourer, 30 years, "Asiatic cholera, (3 days)."
Wife of a labourer, 27 years, "spasmodic cholera, 4 days)."
At 18, Henry-street, son of a cabinet maker, 5 years, "cholera, (2 days)."
Borough-road.
M. 64 years, "Asiatic cholera (12 hours)."
London-road.
M. 9 years, "cholera, (26 hours)."
NEWINGTON; St. Mary.
M. 53 years, "natural death, cholera, asphyxia (8 hours)." Inquest.
F. 35 years, "cholera algida (11 hours)."
St. Peter, Walworth.
M. 27 years, "diarrhoea (4 days), cholera (40 hours)."

NEWINGTON; Trinity.
At 4, Providence-buildings, New Kent-road, M. 58 years, "paralysis generally; feeble heart (1 year); cholera (12 hours)."
At 179, Kent-street, F. 30 years, "cholera (30 hours)."
LAMBETH; Waterloo, 1st Part.
Printer, 45 years, "Asiatic cholera (10 hours)."
Boy, 4 years, "English cholera (24 hours)."
Waterloo, 2nd Part.
At 18, Jurston-street, son of a waterman, 2 years, "diarrhoea and sickness, merging into cholera (5 days)."
At 18, Jurston-street, son of a waterman, 14 years, "cholera (68 hours)."
At 9, Cheltenham-place, a beer-seller, 57 years, "rheumatic pericarditis (10 years); diseased mitral valves (6 months); cholera Asiatica (18 hours)."
At 17, Jurston-street, labourer, 41 years, "cholera (16 hours)."
At 17, Agnes-street, wife of a porter, 80 years, "Asiatic cholera, (12 hours)."
Lambeth Church, 2nd Part.
M. 23 years, "cholera (10 hours)."
This man was a licensed hawk. He was intoxicated on the Saturday, and locked up until Monday, when he was discharged; and took a hearty supper of pork, greens, and potatoes at night. He was seized with cholera at 2h. a.m., on Tuesday, and died on the same day.
Kennington, 1st Part.
At 26, Ely-place, hammerman to a blacksmith, 22 years, "malignant cholera, (9½ hours)."
At 3, William-street, Dorset-street, daughter of a bricklayer, 14 years, "cholera (12½ hours)."
At The Lodge, South Lambeth, daughter of a solicitor, 2 years and 8 months "cholera (16½ hours)."
CAMBERWELL; sub-district Camberwell.
Boy, 5 years, (post. mort.), "natural death, cholera (6 days)." Inquest.
In Peckham House Lunatic Asylum, wife of a policeman, 32 years "spasmodic cholera (13 hours)."
In Peckham House Lunatic Asylum, widow, 75 years, "spasmodic cholera (14 hours)."
In Peckham House Lunatic Asylum, female servant, 54 years, "general paralysis, cholera (22 hours)."
In Peckham House Lunatic Asylum, apistec, 50 years, "spasmodic cholera (7 hours)."
In Peckham House Lunatic Asylum, wife of a lucifer box maker, 28 years, "spasmodic cholera (19 hours)."
At 12 Queen-street, daughter of a gardener, 2 years and 6 months, "cholera, (51 hours)."
At 12 Queen street, daughter of a gardener, 16 years, "cholera, (19 hours)."
Peckham.
In workhouse of the City of London, M. 26 years, "Asiatic cholera, (12 hours)."
This was a casual pauper, who entered the poor-house 12 days previous to his decease, and was then unwell from low fever.
In workhouse as above, M. 52 years, "Asiatic cholera, (12 hours)."
This was a casual pauper who entered the poor-house 6 days previous to his decease quite well and continued so until attacked by the cholera.
ROTHERHITHE; sub-district Rotherhithe.
F. 31 years, "cholera, (19 hours)."
Girl 3 years, "cholera, (43 hours)."
Boy 11 years, "cholera, (36 hours), congestion of the brain."
Boy 7 years, "cholera, (13 hours)."
Girl 7 years, "cholera, (2 days)."
GREENWICH; Greenwich, West.
In Dreadnought Hospital, M. 36 years, "cholera (2 days)."
In Dreadnought Hospital, M. 27 years, "admitted with ulcerated throat, attacked with cholera on the 28th October."
WANDSWORTH AND CLAPHAM; Wandsworth.
Girl, 3 years, "cholera (12 hours)."

* Mr. Montaigne, the Registrar, states that, "the above death from Asiatic cholera, was that of the daughter of a poor labouring man with a wife, and eight other children, and only two rooms for the whole family. The river Lea is in front, and a black ditch runs close at the back of the house, which conveys the sewage from the terraces on the top of the hill, to the river. The ditch is uncovered, and at times the stench is very great."

† Mr. Bensted, the Registrar, states that, "the above two cases occurred in a house situated at 6, Finamore's-place, Russell-street, Southwark, by the side of which runs an open sewer, which receives the decayed offal of a fellmouger's yard in the neighbourhood; and it is the opinion of Dr. Russell, the medical attendant, that this circumstance operated to produce the disease."

Note by Mr. Nokes, the Registrar of Woolwich Dockyard, (sub-district):—"Up to Thursday last no new cases of cholera had occurred among the convicts, nor were any deaths registered. But since that time, three convicts have died from 'diarrhoea and Asiatic cholera,' and would have been included in the week's return, but the Inquests have not yet been held. Two died yesterday, and one to-day, (Nov. 4th). One of the 'guards' and other persons employed in the convict ship have been attacked with the disease, but are convalescent. I do not hear of a single case in the town."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 43

(The tabular abstract on the first page is for the week ending Saturday, Nov. 4th. The following selection of cases is made from the Returns for the week ending Oct. 28.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Drowning:—	duration	Burns and Scalds:—	duration
In Westminster Hospital, son of a carpenter, 14 (post mort.), concussion and rupture of the brain, by falling from a scaffold when at work, at a building in Belgrave-road	2 days	Son of a labourer, 6, drowned by falling into the River Thames whilst at play on a barge off Millbank	instant	Daughter of a carpenter, 12, burn of the body and limbs; clothes caught fire at the grate, probably when putting potatoes into a saucepan—found dying at the foot of the stairs, died.	in about 10 minutes
F. 47, found dead without marks of violence sufficient to cause death, but it may have been accelerated by a fall.	*	F. about 23 (rank or profession unknown), supposed to have been drowned—no evidence how she came into the water—no mark of violence—found dead.		Prisoner, formerly a labourer, 18, burns of body and limbs accidentally received.	16 days
F. 2, accidental death from a crush and fracture of the skull, between a post and the wheel of a cart.	*	M. 12, accidentally drowned by a fall into the basin of the Regent's Canal	instant	his shirt took fire at the gas-burner of his cell when lighting a piece of paper.	
Wounds:—		M. 21, accidentally drowned by the upsetting of a boat.		Poison:—	
M. about 23, pistol shot wound in the head—no evidence whether with suicidal intent.	instant	M. (age unknown) found dead, apparently drowned.		Accountant, 56, diluted hydrocyanic acid—suicide—not known to be insane	*
M. 51 (no inq.), phlegmonous erysipelas of the arm, arising from slight abrasion of the finger.	1 week	F. apparently 55, threw herself into the New Cut of the River Lea, in what state of mind unknown.		F. 6 weeks, natural from convulsions, may have been accelerated by a narcotic medicine given to relieve pain, but not to destroy life	*
M. 1 (no inq.), incised wound of the scalp on 6th October.		Hanging and Suffocation:—		M. 4, injurious effects of eating fish called conger-eel.	9 hours
erysipelas of head and body	14 days	No deaths in the abstract of the week under this head.			
meningitis.	2 days				

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Hernia (continued):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		CITY OF LONDON; South-west.		F. 76 (post mort.), strangulated femoral rupture	12 hours
PADDINGTON; St. John.		M. 8 mon., small pox (after vaccination)	*	operation on the 17th instant.	
M. 3 weeks, small pox (not vaccinated).	5 days	SHOREDITCH; Hoxton Old Town.		diarrhoea	*
KENSINGTON; Fulham.		M. 25, variola (vaccinated with effect)	12 days	Note.—The time from operation to death should be stated in hours or days.	
F. 2, variola	7 days	— St. Leonards.		In St. Bartholomew's Hospital, F. 43, strangulated hernia—operation	*
convulsions	12 hours	F. 4, small pox (not vaccinated)	8 days	F. 72, strangulated hernia	24 hours
CHELSEA; South.		— Haggerstone West.		F. 30 hours, congenital umbilical hernia and malformation of head	30 hours
M. 7, small pox (vaccinated).	*	M. 6 months, small pox modified (not vaccin.)	5 days	Diabetes; Stone:—	
ST. GEORGE, HANOVER-SQUARE; Mayfair.		STEPNEY; Limehouse.		No deaths registered in the week from either of these causes, except one, for which see Cholera cases for the same time.	
F. 1, variola	*	F. 30, confluent small pox	12 days	Other Disease with Diabetes:—	
— Belgrave.		vaccinated years ago.		F. 26, disease of the mucous membrane of the alimentary canal—diabetes.	*
M. 21, confluent small pox	11 days	— Ratcliffe.		Childbirth:—	
vaccination intentionally omitted.		M. 5 months, natural small pox (not vaccin.).	11 days	The time elapsing from commencement of labour to death should invariably be returned.	
F. 2, confluent small pox	10 days	— Mile End, Old Town (Lower).		F. 36, puerperal fever—peritonitis	*
not vaccinated from prejudice, and fear of humours being the permanent effect.		M. 3, variola (not vaccinated)	9 days	diarrhoea	3 days
WESTMINSTER; St. John the Evangelist.		ST. GEORGE, Kent-road.		F. 42, crural phlebitis	*
F. 11 months, variola confluens (not vaccin.)	11 days	F. 5, small pox (not vaccinated)	*	F. 22, childbirth.	2 days
F. 2, variola confluens (not vaccinated)	14 days	LAMBETH; Waterloo (1st part).		pleuritis—peritonitis	36 hours
— St. Margaret.		M. 1, small pox	10 days	F. 34, childbirth.	8 days
F. 3, small pox (not vaccinated).	14 days	(vaccinated at 2 or 3 months.)		puerperal fever.	4 days
F. 1, small pox	8 days	croup	30 hours	F. 27, puerperal peritonitis	7 days
F. 1, small pox (not vaccinated)	*	M. 1, small pox	11 days	F. 46, childbirth.	2 days
F. 3, small pox confluent (not vaccinated).	*	(vaccinated only a few weeks before.)		convulsions	4 hours
F. 1, small pox confluent (not vaccinated)	16 days	effusion	1 day	F. 36, childbirth.	*
MARYLEBONE; The Rectory.		F. 33, variola	2 weeks	uterine hæmorrhage before and after delivery.	4 hours
F. 2, small pox	2 weeks	vaccinated when 10 years old, leaving cicatrices—death occurred 3 weeks after childbirth.		child still born.	
vaccinated 10 days ago.		M. (son of the above) 3 weeks, variola	1 week	F. 38, childbirth	4 hours
— St. John.		F. 1, variola (vaccinated only a few weeks ago)	1 week	Delirium Tremens:—	
F. 2, small pox (not vaccinated).	1 week	F. 1, small pox	10 days	M. 35, delirium tremens	*
PANCRAZ; Tottenham.		effusion	2 days	M. 66, delirium tremens—effusion on the brain, 6 days	6 days
F. 2, small pox	14 days	(not vaccinated.)		M. 35, delirium tremens	4 days
— Gray's Inn-lane.		M. 2, small pox	16 days	In Dreadnought Hospital, M. 44, (post mort.), delirium tremens	*
F. 15, variola confluent	13 days	effusion	5 days	brain slightly congested; softening	5 days
vaccinated 3 weeks ago.		(vaccinated twice 2½ years ago—once successfully.)		Intemperance:—	
F. 2, small pox (not vaccinated)	12 days	— Waterloo (second part).		No deaths in the abstract of the week under this head.	
— Camden Town.		F. 8 months, variola	1 week	Privation; Want of Breast-milk:—	
These 5 cases occurred in the Small Pox Hospital:—		— Lambeth Church (second part.)		M. 1 month, deficient nourishment from want of the breast	*
F. 18, small pox confluent (unprotected)	10 days	M. 1, confluent small pox.	6 days	F. 11 weeks, inanition	*
F. 22, small pox semi-confluent (unprotected)	20 days	M. 6 months, small pox	10 days	Purpura:—	
hospital fever and gangrene	7 days	vaccinated when the small pox was in the house.		M. 18, purpura hæmorrhagica.	14 days
F. 8, small pox confluent (unprotected)	11 days	Chicken Pox:—		Hæmorrhage, Hæmatemesis, &c.:—	
F. 10, small pox confluent, petechial (unprotected)	46 days	GREENWICH; West.		F. 41, hæmatemesis	*
F. 14, small pox, semi-confluent (unprotected)	34 days	F. 1, varicella	7 days	M. 58, rupture of a blood vessel	*
hospital fever and gangrene.		enlargement of submaxillary glands	4 days	M. 78, hæmatemesis	*
— Regent's Park.		Syphilis:—		Chronic Disease and Hæmatemesis:—	
F. 13, small pox.	17 days	M. 7 weeks, congenital syphilis—eruption of spleen	*	M. 59, chronic disease of pylorus.	60 hours
HACKNEY; Hackney.		Malformation:—		F. 49 (p.m.), degeneration of liver and spleen hæmatemesis the immediate cause of death.	*
F. 27, variola.	1 week	M. 15 days, cyanosis.		Miscellaneous Cases:—	
ST. GILES AND ST. GEORGE; North St. Giles.		F. 16 hours, some unknown malformation.		M. 58 (p.m.), tuberculated liver, enlarged more than four times its natural size, weighing 18½ lbs., recognized only	6 months
F. 4, small pox (vaccinated unsuccessfully)	7 days	M. 4 months (post mort.), malformation of heart.		anasæra	6 weeks
STRAND; St. Clement Danes.		pericarditis	5 days	F. 55, exhaustion from spontaneous salivation, 3 weeks	3 weeks
F. 4, variola	14 days	Hernia:—		In Guy's Hospital, M. 54, exhaustion after operation for aneurism	*
pneumonia	2 days	F. 63, strangulated hernia; violent bilious vomiting—instant collapse	not quite 12 hours	In St. Thomas' Hospital, F. 24, laryngitis.	3 months
vaccinated without effect when 3 months old.		In St. James' Workhouse (Westminster), F. 64, strangulated hernia	4 days	pneumonia	3 days
EAST LONDON; St. Botolph.		inflammation of the bowels.	11 days	tracheotomy	4 days
F. 1, variola	3 weeks	F. 70, hernia, strangulation of bowels	6 days		
first attack—not vaccinated.		cancer of breast	9 years		

In Haggerstone West, three girls of one family were registered in the week, who died, one of *cynanche tonsillaris*, and two of *typhus*.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 4; ossification of the heart, 1; other disease of heart, 3; cholera, 5; violence, 15; other specified causes, 9; "found dead," "natural death," "visitation of God," &c., 2.—TOTAL, 39 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 43.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,

During the Week ending Saturday, 4th November, 1848.

Day.	Phases of the Moon	Mean readings of the Barometer, from 10 a.m. to 10 p.m., (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature				Wind as deduced from Osler's Anemometer.				Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0—10	Rain in inches, read at midnight			
			Dry			Dew Point	In the sun, as shown by a self-register- ing Thermometer read at midday	Lowest on the grass, as shown by a self-register- ing Thermometer read at midday	In the Water of the Thames at Greenwich, by self- registering Thermometers, read at 9 o'clock next morning		Mean from 6 Diff's.	Greatest	Least	Difference between the mean temperature of this day and the mean of the same day on an average of five days	General Direction		Pressure in lbs. on the square foot

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension strong from noon till 1h. 20m. p.m. and at midnight. Nothing was shewn at any other examination.	Three-fourths of the sky were covered till noon, generally overcast till 9h. p.m., and clear afterwards; cirrostratus and scud. Rain was falling at 7h. 30m. a.m., and from 6h. p.m. till 8h. 30m. p.m.
MON.	Nothing was shewn throughout the day.	The sky was overcast between 9h. a.m. and 3h. p.m., and generally clear at other times; cirrostratus and scud. Frequent showers of rain fell during the morning.
TUES.	Nothing was shewn throughout the day.	The sky was cloudless till 9h. a.m., one-third part covered till 3h. p.m., and overcast afterwards; cirrostratus, fleecy clouds and scud. A thick fog prevailed during the morning, and a slight shower of rain fell at 4h. 40m. p.m.
WED.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Fog was prevalent during the morning, and frequent showers of rain were falling during the evening.
THURS.	Nothing was shewn throughout the day.	A small amount of cloud prevailed till 8h. a.m., from this time till 6h. p.m. the sky was generally overcast, and one-third part covered afterwards; cirrostratus, fleecy clouds and scud.
FRID.	Nothing was shewn throughout the day.	Three-fourths of the sky were covered till 6h. a.m., and overcast during the remainder of the day; cirrostratus and scud.
SAT.	Nothing was shewn throughout the day.	The sky was overcast till 6h. 30m. p.m. and clear afterwards; cirrostratus and scud. A slight shower of snow fell at 4h. 5m. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed in grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher," and - "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 41.3; and the mean reading at 6h. p.m. was 47.6; the mean readings at the Royal Observatory for the same times were 40.1 and 45.3 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, November 11th, 1848.

	13	31	45	34	65	62	250

It will be observed that of the 250 deaths from cholera 188 occurred on the south side of the Thames.

FATAL CASES of CHOLERA Registered in the Week ending Saturday the 11th.	
Seven are cases in which Inquests were held: the remainder are all reported to be certified by Medical Attendants except two.	
WESTMINSTER; St. John. M. 26, "Asiatic cholera, (2 days.)"—Inquest. M. 42, "Asiatic cholera (4½ hours.)"—Inquest. The above two cases occurred in the Millbank prison. A case of death by continued fever, is said to have been accelerated by the fear of taking cholera, a patient suffering from cholera having been carried from the ward.	BERMONDSEY; St. Mary. M. 7, "Asiatic cholera (21 hours.)" M. 4, "Asiatic cholera (3 days.)" M. 13, "Asiatic cholera." F. 40, "Asiatic cholera (18 hours after admission.)" St. James. F. 58, "Asiatic cholera (28 hours.)" F. 6, "diarrhoea (5 days); Asiatic cholera (30 hours.)"
HACKNEY; Stamford-hill. * M. 42, "Asiatic cholera (30 hours.)" * F. 14 months, "Asiatic cholera, (14 hours.)" * M. 6, spasmodic blue cholera, (20 hours.)"	ST. GEORGE, SOUTHWARK; Kent-road. At 8, Crown-yard, labourer, 33, "spasmodic cholera (23 hours.)" At 25, Henry-street, son of a labourer, 19 months, "cholera (5 days.)" At 65, Kent-street, labourer, 29, "spasmodic cholera (18 hours.)"
ST. LUKE; City-road. F. 34, "bilious cholera, (5 days.)"	NEWINGTON; St. Mary. F. 41, "diarrhoea (14 hours); cholera (3 hours.)" Trinity. F. 5, "scarlatina (4 days) suppressed by cholera."
EAST LONDON; Cripplegate. At 1, Garter-court, F. 44, "cholera Asiatica, (9 hours.)" This person was very intemperate; on Thursday, Saturday, and Sunday she was in a state of intoxication. She was taken ill on Monday, but the surgeon was not sent for till Tuesday morning, when he found her labouring under cholera.	LAMBETH; Waterloo, 1st Part. In Eaton-street, New-cut, (densely inhabited, ill cleansed and drained,) daughter of a labourer, 11, "cholera (11 hours) collapse, diarrhoea." F. 56, "cholera (3 days) collapse."
BETHNAL GREEN; Hackney-road. † At 1, Collingwood-street, Boundary-street, daughter of a bedstead-maker, 7, "Asiatic cholera, (6 hours.)" † At 1, Collingwood-street, Boundary-street, son of a bedstead-maker, 9, "Asiatic cholera (18 hours.)" † At 1, Collingwood-street, Boundary-street, wife of a silk-dresser, 67, "Asiatic cholera (18 hours.)"	This female lived by selling trifles in the streets and at public houses—she resided in the house where the preceding case occurred. There is another person ill. Waterloo, 2nd Part. At 19, Belvedere-road, John Street, surveyor, 48, "spasmodic cholera (20 hours.)" At 3, Cheltenham-place, widow of a coachmaker, 66, "cholera spasmodica (17 hours.)" At 19, Jurs/on-street, daughter of a mason, 3, "cholera (48 hours.)" At 62, Oakley-street, wife of an oilman, 38, "Asiatic cholera (60 hours) after diarrhoea (6 weeks.)" At 52, Oakley-street, wife of a shoemaker, 34, "Asiatic cholera (4 days.)"
STEPNEY; Wapping. M. 25, "epidemic cholera, (3 days.)"	Lambeth Church 1st Part. M. 4, "cholera spasmodica (4 days.)"
ST. SAVIOUR; Christchurch. In St. Saviour's Workhouse, widow 65, fever with bronchitis, (15 days); cholera, (11 hours.)"	Lambeth Church, 2nd Part. At 60, Devonshire-street, wife of a rope-spinner, 60, "cholera spasmodica (6 days.)" At 15, John-street, son of a labourer, 13, "cholera morbus (4 days.)"
ST. OLAVE; St. Olave. On the 6th November, at 3, Star-court, Bermondsey-street, wife of a labourer 24, "Asiatic cholera; typhus consequent thereon (9 days.)" St. John. F. 5, "cholera Asiatica (48 hours.)"	CAMBERWELL; sub-district Camberwell. In Peckham House Lunatic Asylum, M. an idiot, 35, "spasmodic cholera (6 hours.)" In Peckham House Lunatic Asylum, a spinster, (idiot) 20, "spasmodic cholera (5½ days) and consecutive fever."
BERMONDSEY; Leather-Market. M. 73, "malignant cholera (36 hours.)" M. 14, "Asiatic cholera, (27 hours.)" F. 2, "cholera." F. 11, "cholera." F. 10 years and 6 months, "cholera (14 hours.)" F. 5 months, "cholera." F. 3 years and 9 months, "diarrhoea (14 hours); cholera Asiatica, (8 hours.)"	

CAMBERWELL; Sub-district Camberwell (continued):—

In Peckham House Lunatic Asylum, wife of a labourer, 50, "spasmodic cholera (43 hours)."
In Peckham House Lunatic Asylum, widow of a shoemaker, 52, "spasmodic cholera (3 days)."

Erratum. A female servant was stated, in last week's report, to have died of "paralysis and cholera," in the Peckham House Lunatic Asylum. The death occurred in Camberwell House Lunatic Asylum.

At 4, Ames-place, George-street, Camberwell, daughter of a labourer, 9, "cholera (21 hours)."

St. George.

† At 1, Mahew's-buildings, Wyndham-road, Camberwell, M. 4, son of a labourer, "cholera (4 days)."

† At 1, Mahew's-buildings, Wyndham-road, Camberwell, M. 6, son of a labourer, "Asiatic cholera (10 hours)."

† The above cases were in a close confined place where there is but one water closet for all the inhabitants, and, at times, the smell is very disagreeable.

At 5, Nelson-street, Wyndham-road, Camberwell, M. 6, son of a labourer, "Asiatic cholera (11 hours)."

The above case occurred in a neighbourhood which is principally inhabited by the Irish. The child was in perfect health at school 11 hours before he was taken ill. The remainder of the family have been taken away from the house by their friends.

* Mr. Montaigne, the Registrar, states that:—"the above 3 cases of cholera occurred at High-hill ferry. The first was that of a foreigner 42 years of age who worked at a carmine factory, which is situated on a swampy piece of ground close to the river Lea. In front and by the side of the road leading thence, runs a black uncovered ditch, which conveys the sewage from Mount Pleasant, Springfield, and other parts of the hill. It commences at the end of Springfield, and after running some hundred yards empties itself into the river Lea below the factory; in its progress it runs so close in the rear of two cottages, that in wet weather it washes their side walls, and at all times it smells very offensively. The other two cases were of children of a labouring man, with a wife and four other children, occupying 2 rooms of a house, which, (my informant says) is so damp that the water stands on the walls. The privy flooring is so bad, that when the door is open, the smell becomes intolerable. The water used by the greater portion of the inhabitants is that of the river Lea, which receives the waste water of two or three factories in this neighbourhood.

† Mr. Murray, the Registrar makes the following statement respecting the cases of cholera originating in No. 1, Collingwood-street, Boundary-street, Bethnal-green, in the immediate vicinity of Shoreditch Church:—"Mrs. Tyler, the wife of a labourer, had been to Pelham-street, Spitalfields, on Thursday November 2nd, and as nurse, was attacked with Asiatic cholera, and died on Sunday the 5th. On the same afternoon, James Lucas, the son of a bedstead-maker, was also attacked, and died the next morning, in 18 hours; he had eaten a considerable quantity of grapes. On the 8th a daughter of the same man, was also attacked, and died in 6 hours. Mrs. Tyler, the woman originally attacked was removed with 4 children into the Bethnal-green, Workhouse, where I am informed by Mr. Ager, the parochial surgeon, she and the neighbourhood crowded, but not as regards public arrangements otherwise injurious to health. There were 18 persons resident in this house, built for 4 rooms, but actually containing three, the two rooms above having been converted into one inhabited by Lucas. The poor generally in this neighbourhood are irregular in their diet, often in temperate, and not attentive to the cleanliness so necessary to health."

ROTHERHITHE; Rotherhithe.

F. 13, "Asiatic cholera (13 hours)."

F. 74, "cholera (14 hours)."

M. 30, "Asiatic cholera (22 hours)."

GREENWICH; Greenwich Dockyard.

M. 16, "epidemic cholera (70 hours)."

This case was that of a school boy on board the "Venus" Marine Society's Ship for educating lads for the sea. The ship is moored near the Dockyard.
M. 59, a convict, "diarrhoea (8 days), Asiatic cholera (4 days)."—Inquest.
M. 55, a convict, "Asiatic cholera (4 days)."—Inquest.
M. 59, a convict, "fever (3 days), Asiatic cholera (1 day)."—Inquest.
M. 63, a convict, "asthma (21 days), Asiatic cholera (2 days)."—Inquest.
M. 30, a convict, "ophthalmia (57 days), Asiatic cholera (11 days), diarrhoea (7 days), fever (2 days)."—Inquest.

GREENWICH; West.

In Dreadnought Hospital, M. 29, "cholera."

WANDSWORTH; Clapham.

F. 4, "spasmodic cholera (15 hours)."

LEWISHAM; Plumstead.

M. 1½ year, "English cholera (1 week)."

Not certified—no medical attendant.
No danger was apprehended in the above case until the day before the child died. A medical man was then sent for, who promised to come but did not. I have made particular inquiries of the family, and have no reason to suppose it was anything but a case of common English cholera.

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 44.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 11th. The following selection of cases is made from the Returns for the week ending Nov. 4th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—

	duration
Seaman, 18, fracture of the skull by falling of off the mainyard of the brig "Robert Peel," accidentally.....	*
Seaman, 58, head crushed by the falling of a long boat accidentally.....	*
M. 76 (no inq.), diarrhoea—exhaustion from old age, having previously received an injury from a fall.....	*
M. 67 (no inq.), fall.....	14 days
crisypelas.....	36 hours
Sail-maker, 43, rupture of the ilium artery, from being struck by the shaft of a cart accidentally.....	4 days
F. 78 (no inq.), fracture of ribs.....	4 days

Wounds:—

	duration
Clerk to a tea-broker, 32, wound in the throat—suicide (when insane).....	*
F. 29 (no inquest), crysipelas of arm from a wound of the finger.....	11 days
In London Hospital, tohaconist, 40, cut his throat in a temporary state of insanity....	*
Drowning:—	
M. formerly a policeman, afterwards a toll-collector at a turnpike (out of employment) 32, suffocation by drowning—found dead.	
Sea-apprentice, 15, accidentally drowned in the Thames by falling from a vessel.	

Drowning (continued):—

	duration
Ballast heaver, 27, accidentally run down by a barge, in a boat, and drowned.	
Cabinet-maker, 34, found dead, apparently drowned, without marks of violence.	
Hanging and Suffocation:—	
Daughter of a bricklayer, 10 weeks (post mort.), asphyxia when in bed with her father and mother—accidental.....	instant
Poison:—	
M. 18, suicide by oxalic acid (in temporary mental derangement).....	20 mins.
Wife of a gardener, 60, suicide with arsenic, 5 hours in temporary insanity from intemperance.	

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HEMORRHAGE, HEMATEMESIS, ETC.

Small Pox:—

NOTE.—It should be stated in all cases whether vaccination had been performed with effect.

	duration

	duration
M. 2, small pox (natural).....	9 days

PANCRA; Somers Town.

	duration
F. 2, small pox (not vaccinated).....	1 week

Camden Town.

	duration
In Small Pox Hospital, M. 24, small pox confluent, modified.....	25 days
vaccinated when young at Chienies, Bucks, one excellent cicatrix.	

	duration
In Small Pox Hospital, F. 8 months, small pox confluent, unprotected.....	*

Regent's Park.

	duration
I. 11 weeks, small pox confluent (not vaccinated).....	10 days

Islington East.

	duration
I. 2, variola (not vaccinated).....	11 days
three other children were not vaccinated, in consequence of prejudice, till this was attacked.	

Small Pox (continued):—

	duration
HACKNEY; West.	
M. 5 weeks, confluent small pox (not vaccin.).....	9 days

STRAND; St. Mary.

	duration
F. 2, variola—bronchitis.....	*

CLERKENWELL; Goswell-street.

	duration
F. 15, variola, with hæmorrhage from all the mucous surfaces.....	4 days

SHOREDITCH; St. Leonards.

	duration
M. 7 months, small pox (not vaccinated).....	8 days
F. 2, small pox (not vaccinated).....	9 days

WHITECHAPEL; Mile End, New Town.

	duration
F. 60, small pox.....	18 days

St. GEORGE IN THE EAST; St. Mary.

	duration
F. 23 (Inq.), natural death.....	sudden
under removal for small pox.....	*

STEPNEY; Mile End, Old Town (Lower).

	duration
M. 3, variola.....	14 days
vaccination attempted twice without success.	

POPLAR; Poplar.

	duration
F. 3 weeks, variola confluent (not vaccinated).....	

St. OLAVE; St. Olave and St. Thomas.

	duration
F. 3, variola confluent.....	10 days

St. GEORGE, SOUTHWARK; Borough-road.

	duration
M. 4, small pox (vaccinated with effect when 3 months old)—no medical attendance....	*

St. GEORGE, SOUTHWARK; Boro'-road (continued):—

	duration
F. 7, variola.....	4 days
purpura.....	2 days
vaccinated 3 times without success.	

London-road.

	duration
F. 3, small pox.....	3 weeks
vaccinated with effect about 2½ years ago.	
F. 2, small pox (vaccinated about 2 years ago with effect—mark left).....	*
no medical attendant.	

Small Pox (continued):—

	duration
St. MARY, NEWINGTON; Trinity.	
F. 7, small pox.....	6 days
vaccinated with effect 6 years ago.	
pneumonia.....	*

LAMBETH; Waterloo (1st part).

	duration
F. 3, small pox.....	14 days
(vaccinated recently without effect).	
diseased brain for some time.	

Church (1st part).

	duration
M. 26, small pox.....	14 days

CAMBERWELL; Peckham.

	duration
M. 4, small pox (not vaccinated).....	15 days

GREENWICH; Woolwich Arsenal.

	duration
F. 1, small pox (not vaccinated).....	2 weeks

Chicken Pox:—

	duration
In South St. Giles in the Fields, F. 1, chicken pox.....	*

Syphilis:—

	duration
M. 6 weeks, syphdis.....	congenital
M. 3 weeks, secondary venereal.....	*
F. 6 weeks, syphilis.....	from birth
convulsions.....	1 day

Malformation:—

	duration
F. 12 days, spina bifida.	
F. 2 days, spina bifida.	
F. 4 months, spina bifida—hydrocephalus..	from birth
M. 7 months, spina bifida	
convulsions.....	2 days
M. 2 days, malformation—imperfect anus—imperfect urethra.	
F. 16 hours, malformation of heart.	
M. 3 days, spina bifida.	
M. 18 days, spina bifida.	
M. 3 weeks, malformation of heart.	
M. 14 days, cyanosis from premature birth.	

Hernia:—

	duration
M. 41 (post. mort.), strangulated hernia.....	4 days
operation—peritonitis—ulceration.....	12 days

Diabetes; Stone:—

	duration
No deaths from either of these heads in the abstract of the week.	

DEATHS BY CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, &c. (continued):—

Childbirth:—

The time elapsing from commencement of labour to death should invariably be returned.

In the Lying-in-Hospital, City-road, F. 33, childbirth	4 days
peritonitis	3 days
In same Hospital, F. 24, childbirth	7 days
peritonitis	5 days
In same Hospital, F. 21, childbirth	3 days
peritonitis	2 days
F. 27, parturition	6 days
puerperal fever	4½ days
F. 34 (p.m.), puerperal peritonitis, 10 days after delivery	*
Query.—Did peritonitis begin, or death occur, in 10 days after delivery.	
F. 36, delivery	7 hours
hæmorrhage	*
F. 37 (inquest), loss of blood in labour with a twin	*
F. 40, uterine hæmorrhage, 2 hours after delivery	*
F. 27, childbirth	3 days
premature confinement, from diseased kidneys	*
F. 25, miscarriage—exhaustion	7 days
F. 36 (inquest), natural, from exhaustion in childbirth	*
F. 31, extreme debility and exhaustion, 5 days before and after childbirth	*

Disease and Childbirth:—

F. 26, bronchitis	long standing
delivery	12 days
F. 29, pulmonary disease	*
puerperal (disease?)	2 days
diarrhœa	*
F. 25, consumption	4 months
hæmoptysis	10 days
premature confinement	12 hours after delivery
exhaustion	*
Delirium Tremens:—	
M. 26, delirium tremens	*
Dis. of Brain and Delirium Tremens:—	
In Dreadnought Hospital, M. 27 (post mort.), delirium tremens—fever—brain softened—great effusion into the ventricles—scattered tubercles—intestines and omentum glued together with lymph—tubercular deposits on peritoneum	*
Intemperance:—	
M. 33, dissipation—hæmoptysis	*
Privation; Inanition, &c.; with Want of Breast-milk:—	
In St. Saviour's, Southwark, F. 52 (no inq.), destitution	several years
asthma	*
In same sub-district, F. 18 (no inquest), poverty	3 days
diarrhœa	10 days
consecutive typhoid fever	10 days

Privation; Inanition, &c. (continued):—

M. 6 weeks, aphtha—inanition—want of breast-milk	*
M. 5 months, diarrhœa—dry-nursed	*
The last two placed in abstract to thrush and diarrhœa respectively.	
Purpura and Scurvy:—	
M. 22, scorbutus	4 years
anæmia	*
Hæmorrhage, Hæmatemesis, &c.:—	
F. 59, hæmatemesis and melæna, result of disease of liver	*
Placed in abstract to disease of liver.	
F. 6 hours, rupture of a blood-vessel of the lungs	*
Miscellaneous Cases:—	
F. 44, ovarian tumour	3 years
peritonitis after paracentesis	3 weeks
M. 32, chronic disease of the stomach	3 years
painter's colic	9 days
M. 72 (post mort.), enlarged tumour attached to the pelvis of the kidney, weighing 14lbs. —mortification of intestines from pressure of the tumour.	2 years ago.
F. 2 (inquest), congestion of the brain on incipient scarlet fever, accelerated by drinking a quantity of cold water	*
In South Chelsea, son of a soldier, 5 (inquest), exhaustion from neglected diarrhœa, while living at unwholesome, damp, unventilated premises	*

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD—Apoplexy, 6; diseased heart, 4; small pox, 1; childbirth, 2; cholera, 5; had sanitary condition, 1; violence, 12; other specified causes, 9; "found dead," "natural death," "visitation of God," &c., 18.—TOTAL, 58 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 36.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 11th November, 1848.

Day.	Phases of the Moon	Mean readings of the Barometer, from 12 Observations, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 7 years	Wind as deduced from Osler's Anemometer.				Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0—10	Rain in inches, read at midnight			
			Dry			Dew Point	In the sun, as shown by a self-register- ing Thermometer read at midnight	In the Water of the Thames at Greenwich, by self- registering Thermometers, read at 9 o'clock next morning	Mean from 6	Greatest	Least	General Direction		Pressure in lbs. on the square foot

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was clear till 9h. a.m., and overcast during the remainder of the day; cirrostratus and scud. A slight shower of rain fell at 1h. p.m., and rain was falling from 11h. 30m. p.m., till midnight.
MON.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud.
TUES.	Nothing was shewn throughout the day.	One-third part of the sky was covered between noon and 3h. p.m., it was otherwise cloudless throughout the day.
WED.	Nothing was shewn throughout the day.	The sky was cloudless throughout the day.
THURS.	Nothing was shewn throughout the day.	The sky was generally cloudless throughout the day.
FRI.	Nothing was shewn throughout the day.	The sky was cloudless till 10h. p.m., and overcast afterwards; cirrostratus and scud.
SAT.	Nothing was shewn throughout the day.	The sky was generally covered with cirrostratus and scud throughout the day. A shower of rain fell at 7h. 30m. a.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first class standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1848.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 37.0; and the mean reading at 6h. p.m. was 42.3; the mean readings at the Royal Observatory for the same times were 36.7 and 40.9 respectively.

The maximum thermometer for determining the temperature of the Thames water, has been out of order since Nov. 7.

Births and Deaths registered in London,

During the Week ending Saturday, November 18th, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 46.]

The table is read thus:—Five men at the age of 25 years, and less than 35, died after illness of 18 hours and less than 24 hours.

FATAL CASES of CHOLERA Registered in the Week ending Saturday the 18th.

Three are cases in which Inquests were held: the remainder are nearly all certified by Medical Attendants.

ST. JAMES, WESTMINSTER; Berwick Street.

At 39, Berwick-street, wife of a designer of military coats, 27, (post mort.), "cholera induced by intemperate habits, doubtful whether Asiatic cholera, found dead in bed."—Inquest.

ST. PANCRAS; Somers Town.

Daughter of a waterman, 4, "English cholera (6 days.)"

HACKNEY; Stamford Hill.

M. 60, "Asiatic cholera (21 hours.)"

SHOREDITCH; St. Leonard's.

At 7, Cook's Walk, White Bear Gardens, Kingsland Road, wife of a labourer, 40, "Asiatic cholera (48 hours.)"

Mr. Yarrow, the Registrar states, that:—"The deceased resided in a very damp and unhealthy situation, with a drain of dirty water in front, and an open sewer in the rear. Several pigsties are erected against the back doors of the cottages, and indeed the whole place presents an accumulation of filth. The deceased, whose husband was employed in the parish stoueyard, lived in extreme poverty, and scarcely ever tasted animal food. The death occurred on the 16th instant, and since that time a child has been attacked with diarrhoea." The Rev. William Denton, curate of the parish, makes the following communication. "Cook's-walk, consists of a row of tenements, low, small, and excessively damp. I do not remember a time when typhus, scarlet fever, or small-pox, was not in some one or another of the five or six houses which comprise the row. So far as I can ascertain, the case to which I now call your attention, is the only one of death from Asiatic cholera that has occurred in the district of the parish church of St. Leonard's."

BETHNAL GREEN; The Green.

M. 2, "Asiatic cholera (4 days.)"

M. 5, "Asiatic cholera (4 days.)"

F. 45, "cholera (28 hours.)"

F. 29, "Asiatic cholera (9 days.)"

WHITECHAPEL; Mile End New Town.

At 3, Pelham-street, M. 3, "debility;—malignant cholera (about 30 hours.)"

ST. GEORGE IN THE EAST; St. Paul.

F. 36, "diarrhoea (3 days), spasmodic cholera (10 hours.)"

STEPNEY; Ratcliff.

F. 37, "Asiatic cholera (2 days.)"

POPLAR; Bow.

M. 30, "natural death sudden from cholera."—Inquest.

This person was a tobacco-pipe maker, and resided in Frederick-street, Bromley, where some of the houses are in a state of excessive filth from want of necessary arrangements. The street is chiefly occupied by Irish, and is the receptacle for all the waste vegetable and animal substances of about 100 houses. Each house has four rooms, and in most cases a family in each room.

F. 45, "cholera (13 hours.)"

F. 43, "cholera (48 hours.)"

F. 36, "cholera (16 hours.)"

These women were inmates of Grove Hall Lunatic Asylum, Bow.

ST. SAVIOUR; Christchurch.

At 19, Bear-lane, wife of a labourer, 29, "cholera (7 days), typhus (4 days.)"

FATAL CASES OF CHOLERA Registered in the Week ending Saturday the 18th (continued):—

ST. OLAVE; St. Olave and St. Thomas.
At 4, Tattle-court, on Nov. 11th, daughter of a labourer, 10, "Asiatic cholera (2 days), typhus (7 days.)"
At 43, Tooley-street, Nov. 13th, surgeon, 40, "spasmodic cholera (5 days.)"
— St. John.
M. 7, "Asiatic cholera (60 hours.)"
BERMONDSEY; Leather Market
M. 36, "cholera (8 hours.)"
F. 6, "cholera (48 hours.)"
F. 16, "Asiatic cholera."

— St. Mary Magdalen.
M. 5, "cholera."
M. 1, "cholera."
F. 7, "cholera."
ST. GEORGE, SOUTHWARK; Kent-road.
At 122, Kent-street, son of a labourer, 6, "cholera (12 hours.)"
At 1, Board's-buildings, daughter of a labourer, 5, "cholera."
At 8, Pleasant-place, wife of a messenger, 31, "cholera, (2 days.)"
— Borough-road.
F. 18 months, "choleric diarrhoea, (2 hours.)"
M. 3, "Asiatic cholera, (3 days.)"

— London-road,
M. 50, "Asiatic cholera"
F. 36, "cholera (20 hours.)"
NEWINGTON; St. Mary.
M. 46, "cholera (7 hours.)"
F. 2, "English cholera (8 days); cerebral congestion."
— Walworth.

F. 35, "English cholera (6 days); convulsions, 3 fits (12 hours.)"
Mr. Turner, the Registrar, states that "the deceased was stewardess of the 'Trent' Mail steamer, and had come on a visit to Walworth, while the ship lay at Southampton. On the day after her arrival she was seized with violent vomitings and diarrhoea, hut without pain. She was cleanly and temperate in her habits. The house was clean, but there is no drainage in the neighbourhood."

— Trinity.
At 9, Chatham-place, North Lock's-fields, M. 9, "cholera (36 hours.)" The house is situated on the banks of an open sewer.

NEWINGTON; Trinity (continued):—
At 1, Cottage-place, County-terrace-street, New Kent-road, M. 3, "Asiatic cholera (24 hours.)" This house, which is damp and badly drained, is situated in a narrow passage 3 yards wide, with an archway at one end, where is always a quantity of vegetable and animal matter in a state of decomposition."
At the same house, F. 7, "Asiatic cholera (5 days.)"
LAMBETH; Waterloo (1st Part.)
Daughter of a comb-maker, 11, "cholera, (15 days); well, (3 days); typhus, (9 days.)"
Wife of a comb-maker, 35, "cholera, (4 days); miscarriage on 2nd day—exhaustion."
Daughter of a comb-maker, 9, "cholera, (4 days); diarrhoea, cramps."
Mr. Mears, the Registrar, states that "these three cases occurred in a family in Mitre-place, Broadwall. Mr. Dawson, the surgeon, attributes the disease to a foul atmosphere, arising from bad drainage; two other children have been attacked, hut are likely to recover."

— Waterloo (2nd Part.)
At 29, Jurston-street, wife of a sofa-maker, 40, "cholera (11 hours.)"
— Lambeth Church (1st Part.)
M. 3, "English cholera, (14 hours.)"
— Lambeth Church (2nd Part.)
At 3, Charles-place, Union-street, son of a labourer, 15, "cholera (7 days); fever (3 days.)"

CAMBERWELL; Sub-District Camberwell.
In Lunatic Asylum Peckham House, M. 20, "spasmodic cholera (37 hours.)"
In the same house, M. 27, "spasmodic cholera (15 hours.)"
In same house, F. servant 25, "spasmodic cholera (23 hours.)"

ROTHERHITHE; Sub-District Rotherhithe.
M. 35, "cholera (10 hours.)"
F. 9, "Asiatic cholera (15 hours.)"
GREENWICH; Woolwich Dock-yard.
M. convict, 63, "Asiatic cholera (9 days.)"—Inquest.
— Greenwich, East.
M. 67, "English cholera with typhus (30 hours.)"
— Greenwich, West.
In Dreadnought Hospital, M. 17, "cholera."
In same ship, M. 23, "cholera followed by sore throat and diffuse cellular inflammation."

WANDSWORTH; Clapham.
M. 3, "diarrhoea (12 hours), cholera (2 hours.)"

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 45.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 18th. The following selection of cases is made from the Returns for the week ending Nov. 11th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Burns and Scalds:—	duration
In St. Bartholomew's Hospital, F. probably between 60 and 65 (p.m.), apoplectic fit—fell down stairs—fracture of the skull and rupture of two blood-vessels on the brain, 31 hours		In St. Bartholomew's Hospital, M. 29, cutting his throat with a razor, at Hatton Wall (in temporary insanity) a few mins.		In St. Bartholomew's Hospital, F. 2, burnt by her clothes taking fire at Norfolk-place, Curtain-road 16 hours	
In St. Bartholomew's Hospital, F. about 70, effects of a compound fracture of her right leg, by falling down stairs, at Great Winchester-street 20 days		Drowning; Immersion:—		In St. Bartholomew's Hospital F. 62, burnt by her clothes taking fire, at Vine-court, Golden-lane 5 hours	
In St. Bartholomew Hospital, M. 45, fracture of his skull by falling from a load of timber whilst binding it, in East-street 2 hours		In Westminster Hospital, wife of a warehouseman, 64, drowned by throwing herself from a steam-boat into the Thames—submerged about 2 minutes—lived about 20 mins. (temporary insanity.)		In St. Bartholomew's Hospital, M. 2, scalded by the upsetting of a saucepan containing boiling water, at York-street, Kingsland-road 12 days	
F. 76 (no inq.), paralysis with fracture of humerus 52 days		Carpenter, 20, drowned while hathing. under water 2 hours.		Poison:—	
M. 73 (no inq.), contused spine 18 months ago diarrhoea 6 weeks		Mariner, about 32, accidental death from drowning, by a fall from a barge.		Son of a chemist and druggist, 20 (post mort.), hydrocyanic acid—no evidence how it came into the stomach *	
Wounds:—		M. 18, accidentally drowned in the Thames by falling out of a barge.		Other Violence:—	
M. 74 (no inquest) diseased shoulder joint from an old gun-shot wound *		Hanging and Suffocation:—		In St. Bartholomew's Hospital, M. 39 (p.m.), erysipelas of the left side, and inflammation of his lungs and pleura, brought on by a strain in slipping down at the Haymarket Theatre 12 days	
M. about 50, loss of blood from a wound in the throat (suicide when insane) *		Linen-draper, 35, hanged himself with a rope to a post in the shop—found dead *			

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Small Pox (continued):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		PANCRA8 Camden Town.		ST. SAVIOUR; St. Saviour.	
CHELSEA; South.		In Small Pox Hospital, M. 25, small pox, confluent, malignant 6 days		M. 6, small pox 5 weeks	
M. 4, small pox (vaccinated) 13 days		said to have been vaccinated in Hanover when a child—no cicatrix.		F. 5 months, small pox 10 days	
F. 10, small pox (not vaccinated) 10 days		F. 30 (p.m.), small pox confluent, unprotected 11 days in hospital 9 days.		pneumonia 3 days	
— North-west.		ISLINGTON; East.		ST. GEORGE; Kent-road.	
M. 1, small pox 21 days		F. 2, small pox (not vaccinated) 10 days		F. 2, small pox (not vaccinated) *	
M. 10, convulsions 1 day		HOLBORN; St. George the Martyr, &c.		— Borough-road.	
M. 10, confluent small pox 10 days		F. under 1, small pox (natural) 10 days		M. 7 months, variola confluent (not vaccinated) *	
— vaccinated when 3 months old.		vaccinated a month ago without effect.		pneumonia 4 days	
ST. GEORGE; Hanover-square.		CLERKENWELL; St. James.		F. 4 months, small pox (not vaccinated) 14 days	
M. 10 days, small pox 4 days		F. 17, small pox (after vaccination) *		— London-road.	
vaccinated without effect 3 days after birth, the mother having died of small pox 5 days after the birth of the child.		childbirth 7 days		F. 5, small pox *	
— Belgrave.		ST. LUKE; Whitecross-street.		vaccinated about 5 years ago, supposed effectually.	
F. 10, variola 7 days		F. 5, small pox (vaccinated without effect) 3 weeks		LAMBETH; Church (1st part).	
petechia 2 days		— Old-street.		M. 5, variola (not vaccinated) 14 days	
vaccinated when 6 years old successfully; the infection caught from a person whose death was previously recorded.		F. 3, small pox (natural) 3 weeks		— Church (2nd part.)	
WESTMINSTER; St. John the Evangelist.		BETHNAL GREEN; The Green.		M. 2, small pox (not vaccinated) 7 days	
M. 4, variola (not vaccinated) 9 days		M. 1, small pox (not vaccinated) 5 days		M. 1, variola confluent (not vaccinated) 10 days	
F. 3, variola confluent (not vaccinated) 8 days		— The Church.		asphyxia *	
* ST. MARTIN-IN-THE FIELDS; Charing Cross.		M. 1, small pox (not vaccinated) 12 days		F. 2, variola confluent (not vaccinated) 11 days	
F. 7, small pox (unprotected) 8 days		WHITECHAPEL; Spitalfields.		F. 10, variola confluent 14 days	
MARYLEBONE; The Rectory.		F. 1, small pox (not vaccinated) 12 days		(vaccinated at 6 months without effect.)	
M. 1, variola (not vaccinated) 11 days		diarrhoea 5 days		Syphilis:—	
F. 3, small pox (not vaccinated) 10 days		STEPNEY; Mile End, Old Town (Upper).		In Royal Free Hospital, F. 20, syphilis—	
PANCRA8; Gray's Inn-lane.		F. 9 months, small pox 11 days		scarlatina—erysipelas 14 days	
M. 4 months, small pox (not vaccinated) 10 days		previously vaccinated apparently with effect 6 months ago.		M. 5 months, syphilis—coryza *	

* Mr. Leonard states, that small pox and scarlatina of bad type are very prevalent in his district.

DEATHS BY MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, &c. (continued):—

Malformation:—	duration	Childbirth (continued):—	duration	Intemperance:—	duration
F. 18 days, spina bifida.		F. 20, accouchment—child still born	*	M. 56, intemperance	*
Hernia:—		puerperal peritonitis	5 days	chronic gastritis	*
M. 50, internal strangulation of small intestine, 14 days		F. 26, puerperal fever	8 days	coma	*
peritonitis	4 days	In University College Hospital, F. 34 (p.m.),		F. 32 (ing.), disease produced by the habitual	
In Royal Free Hospital, F. 40, strangulated		disease of ankle-joint—erysipelas—pre-		drinking of gin, without eating proper food	*
femoral hernia	4 days	mature labour	*	M. 20, inflammation of heart—diseased stom-	
operation		puerperal fever	9 hours	ach from dissipation	*
F. 77 (p.m.), strangulation of intestine	3 days	F. 25, parturition—puerperal fever	3 days	Privation:—	
In St. Bartholomew's Hospital, F. 40, femoral		F. 24, puerperal fever	10 days	No deaths in the abstract of the week from this cause.	
hernia—operation—diarrhoea	*	F. 28, childbirth	*	Want of Breast-milk; Inanition:—	
F. 62, strangulated hernia	8 days	puerperal fever	5 days	M. 7 weeks, inanition	
In London Hospital, F. 46 (post mort.), hernia		F. 23, puerperal fever	7 days	Hæmorrhage, Hæmatemesis, &c.:—	
strangulated	12 hours	F. 42, puerperal peritonitis	*	No deaths in the abstract of the week from any of these	
operation	*	F. 26, asphyxia from protracted labour	32 hours	causes.	
gut found mortified.		died 4 hours after delivery.		Remittent Fever and Purpura:—	
M. 68, constipation; dehility from rupture ..	*	F. 29, childbirth	6 days	M. 8 months, remittent fever	3 weeks
F. 79, old strangulated umbilical hernia	*	hysteritis ending in puerperal fever	4½ days	purpura hæmorrhagica	*
(ill 5 days.)		See cases of Small Pox.		Miscellaneous Cases:—	
Diabetes:—		Delirium Tremens:—		F. 45, cancer of labia pudendi	2 years
No deaths in the abstract of the week from this cause.		F. 53, delirium tremens	3 weeks	extirpated in November, 1847.	
Stone:—		effusion on the brain—coma	6 days	In University College Hospital, F. 19 (p.m.),	
M. 59, (p.m.), general decay.		Disease and Delirium Tremens:—		paracetesis	14 days
phosphatic deposits in the urine.		In Dreadnought Hospital, M. 48 (p.m.), dif-		peritonitis	4 days
Childbirth:—		fused inflammation of leg	*	Daughter of a watch-maker, 5 (ingest), nat-	
The time elapsing from commencement of labour to		delirium tremens	5 days	ural—not seen by a medical attendant ..	*
death should invariably be returned.		M. 46, erysipelas phlegmonous	*	The physician to the Islington Dispensary had pre-	
F. 28, delivery	6 days	sloughing	*	scribed three times for the child.	
hæmorrhage after labour	*	delirium tremens	3½ weeks	In St. Bartholomew's Hospital, F. 55, tumor	
placenta extensively adherent to uterus.		M. 40, acute rheumatism	18 days	on the fore arm—operation—exhaustion ..	
F. 38, inflammation of the veins of the thigh ..	10 days	delirium tremens	4 days	In Guy's Hospital, M. 12 (p.m.), scalp tumour	
puerperal fever	7 days			removed—abscess in cerebellum	10 days

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 3; disease of heart, 4; dysentery, 1; cholera, 7; intemperance, 1; violence, 15; other specified causes, 8; "found dead," "natural death," "visitation of God," &c., 7.—TOTAL, 46 cases.

THE NUMBER OF CASES IN WHICH IT IS REPORTED THAT A POST MORTEM EXAMINATION WAS MADE, IS 54.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 18th November, 1848.

Day.	Phases of the Moon	Mean readings of the Barometer, from 12 observations reduced to (corrected and reduced to 32-degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 7 years	Wind as deduced from Osler's Anemometer. DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The clouds were broken between 2h. p.m. and 5h. p.m., and from 11h. p.m. till midnight; the sky was overcast at other times; cirrostratus and scud. Thin rain was falling frequently during the morning.
MON.	Nothing was shewn throughout the day.	The sky was clear till 2h. 30m. a.m. and overcast till noon; from this time till 9h. p.m. the amount of cloud was variable, and overcast afterwards till midnight; cirrostratus, fleecy clouds and scud.
TUES.	Nothing was shewn throughout the day.	The sky was covered with fleecy clouds till 6h. a.m., and cloudless during the remainder of the day.
WED.	Nothing was shewn throughout the day.	The sky was generally overcast till 3h. p.m., and clear afterwards; cirrostratus and fleecy clouds.
THURS.	Nothing was shewn throughout the day.	The sky was clear till 6h. a.m.; three-fourths were covered till 3h. p.m., and overcast afterwards; cirrostratus and scud. A slight shower of rain fell near midnight, and the magnets were slightly disturbed. The reading of the barometer at midnight was 30.150 inches; after which it began to decrease quickly.
FRID.	Nothing was shewn throughout the day.	The sky was overcast till 6h. p.m.; from this time till midnight small breaks were occasionally seen in the clouds, through which strong auroral light was seen; the magnets were greatly disturbed. The prevailing clouds were cirrostratus and scud; rain was falling between noon and 5h. p.m. The reading of the barometer decreased during the day, and at midnight it was 29.697 inches.
SAT.	Nothing was shewn throughout the day. Every part of the electrical apparatus has been fully examined during this week.	The sky was generally one-half covered till 6h. a.m., and overcast during the remainder of the day; cirrostratus and scud. The magnets were disturbed during the evening. The reading of the barometer decreased during the day, and at midnight was 29.417 inches.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when parties are cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 39°5; and the mean reading at 6h. p.m. was 42°4; the mean readings at the Royal Observatory for the same times were 39°5 and 42°0 respectively.

The trunk within which the Thermometers are suspended for the temperature of the water of the Thames, was a very great part of the week, for repair.

Births and Deaths registered in London,
During the Week ending Saturday, November 25th, 1848.

ANNUAL SERIES IX.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL. [No. 47.

It will be observed that of the 348 deaths from cholera 241 occurred on the south side of the Thames. In the last week, however, there were 17 deaths in the East Districts

FATAL CASES of CHOLERA Registered in the Week ending Saturday the 25th.

Five are cases in which Inquests were held: the remainder are all certified by Medical Attendants.

KENSINGTON; Town.

At Jennings's-buildings, hawker, 45, "cholera."

HACKNEY; sub-district Hackney.

F. 37, " Asiatic cholera," (60 hours.)"

ST. GILES; South.

F. 4, "natural—sudden; believed by the surgeon to be cholera," (p.m.), *Inquest*.

SHOREDITCH; St. Leonard.

At 6, Burnall's-buildings, Kingsland-road, F. unmarried, a willow-weaver, 29, " Asiatic cholera (11 hours.)"

Mr. Burchell, the medical attendant, states, that " the deceased was taken ill with premonitory symptoms whilst at work at her mother's, in Fountain-alley, Virginia-row, Bethnal-green (said to be a very filthy unwholesome place), at 6h. p.m. Nov. 22nd. At ½ past 7, when I was called to her, she laboured under every symptom of Asiatic cholera, the prostration being extreme. This continued till 5h. a.m. of the 23rd., when she expired 11 hours from the first attack. Her living has been very scanty for some considerable period, and she never had animal food more than once a week. Burnall's-buildings is comparatively clean and healthy; much more so than the confined courts around this locality generally are." Mr. Yarrow, the Registrar, adds, that he " had carefully examined all the tenements in the place, and could find no ground of complaint with regard to water and cleanliness, or any circumstance except want of food from extreme poverty. She had two children, the second only a few weeks ago. Her earnings averaged 3s. 6d. per week, 1s. of which she paid for supporting the infant. Before the attack she

had partaken plentifully for dinner of fried ' turnips and carrots, which had been boiled 3 days previously, and at the same time of tea. All the inhabitants of the court are of the lowest class, and in circumstances of equal distress with those of the deceased."

SHOREDITCH; Haggerstone East.

F. 65, " cholera (24 hours); constitution much enfeebled previously to the attack."

BETHNAL GREEN; The Green.

F. 45, " natural death—sudden, from cholera."—*Inquest*.

F. 5, typhus (9 days); Asiatic cholera, (2 days.)"

WHITECHAPEL; Spitalfields.

F. 23, " Asiatic cholera, (6 days): premature labour (13 hours.) She was recovering from cholera when labour came on."

———— Mile End New Town.

At 21, Booth-street, wife of a carman, 34, " cholera (6 days.)"

———— Goodman's-field.

At 17, White Bear-court, Lambeth-street, F. 45, " cholera (18 hours.)"

At the same house, F. 2, " natural death—sudden, from Asiatic cholera."—*Inquest*.

At No. 10, opposite, F. 5, " Asiatic cholera (4 days.)"

This court has 21 houses, which have two rooms in each. Most of these houses contain two families. The width of the court is only 5 feet, with very bad drainage. There is one water tank for the supply of the inhabitants. The inhabitants are very poor, and several persons have been taken ill.—

Note by Mr. Taylor, the Registrar.

STEPNEY; Wapping.

At 7, Chancery-place, Shadwell, labourer, 40, "natural death; suddeu from Asiatic cholera; diarrhoea (3 days), cholera (18 hours)."—*Inquest.*

At the same house, F. servant, 20, "sudden from Asiatic cholera, diarrhoea (2 days), cholera (12 hours)."—*Inquest.*

Mr. Ross, the Registrar, states that "This is a close confined court consisting of 11 houses, each house having two rooms, with no back yard. The rooms are about 12 feet square. Nearly opposite No. 7 are three open privies and facing the court a foul and offensive drain emitting the most disgusting effluvia. Fifteen persons lived in No. 7, nine in the upper room, and six in the lower. The 11 houses are inhabited by 71 persons. The above cases of cholera when first seen by me exhibited a perfect state of collapse, and terminated fatally a few hours after."

POPLAR; Sub-district Poplar.

M. 48, "spasmodic cholera (30 hours), collapse (4 hours)."

Bow and Bromley.

At Grove Hall Lunatic Asylum, F. 49, "cholera (21 hours)."

In same Institution, F. 50, "cholera (3 days)."

In same Institution, F. 28, "cholera (5 days)."

In same Institution, F. 61, "cholera (4 hours)."

In Old Ford, Bow, by the side of the Lea, F. 68, "cholera (1 day)."

BERMONDSEY; St. James.

M. 9 months, "cholera Asiatica (10 hours)."

ST. GEORGE, SOUTHWARK; Kent-road.

At 58, Henry-street, hawker, 32, "spasmodic cholera."

London-road.

M. 36 "English cholera (15 days), affection of the heart of long standing."

LAMBETH; Church, Second Part.

At 30, Devonshire-street, carman, 52, cholera " (5 days)."

He was a robust person. Shortly before the attack he ate a hearty dinner. His occupation consisted chiefly in the removal of night soil, emptying cess-pools, and drains. Another man who worked with him was seized during his illness and died in a few hours.

ST. GILES; Camberwell,

At 9, Picton-street, spinster, book-folder, 40, "Asiatic cholera (14 hours)."

ROTHERHITHE; Sub-district Rotherhithe.

F. 51, "cholera and fever (3 days)."

F. 11, "Asiatic cholera (55 hours)."

GREENWICH; Greenwich, West.

In Dreadnought Hospital, M. 22, "cholera," (post mort.)

In same ship, M. 53, "cholera," (post mort.)

In same ship, M. 43, "cholera," (post. mort.)

In same ship, M. 39, "cholera," (post. mort.)

WANDSWORTH, &c.; Clapham.

F. 66, "diarrhoea (4 days), cholera (2 days)."

M. 3, "diarrhoea (12 hours), cholera (2 hours)."

Battersca.

At Sleaford-street, son of a labourer, 8, "malignant cholera (14 hours)."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 46.

(The tabular abstract on the first page is for the week ending Saturday, Nov. 25th. The following selection of cases is made from the Returns for the week ending Nov. 18th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging and Suffocation:—	duration
Daughter of a stationer, 6 months (no inq.).		Daughter of a carpenter, 3, concussion and mortal injuries, by falling from a second floor window of the house, 55, Commercial-road, accidentally	19 hours	M. formerly a gentleman's servant, 52, suicide by hanging himself to the rail of a bedstead, being at the time in temporary mental derangement (suspended some hours.)	
varicella	12 days	Wounds:—		F. about 1 week (parents unknown), wilful murder by suffocation, by person or persons unknown.	
accidental injury to head by a fall	14 days	Horse-dealer, 32, suicide with a razor while insane	*	Burns and Scalds:—	
congestion of brain	2 days	M. about 35, late captain in the 63d Queen's Regiment of foot, stabbed himself with a sword (in temporary insanity)	instant	In Westminster Hospital, wife of a silk-dyer, about 66, burns of abdomen and thighs, from clothes taking fire (supposed to have gone to sleep in her chair whilst smoking a pipe)	39 days
coma	12 hours	Private gentleman, about 40, pistol shot wound in the head—suicide when insane	instant	M. 1 (no inq.), sloughing sore from a scald on the chest	1 month
F. 52, accidental death from a fall down stairs, and fracture of spine of neck	*	Drowning:—		In Camberwell House, wife of a shoe-maker, lunatic 44, burns by her clothes accidentally igniting from a piece of rag, taken to light a pipe of tobacco	45 days
In Guy's Hospital, plasterer, about 60, bronchitis and pneumonia, aggravated by fracture of his right hip bone from a truck tilting up, at Wormwood-street, Bishops-gate	6 days	Son of a carpenter, 5, drowned—fell into a tank from the lid being left open, from the want of drainage in the mews—found dead at 105, Eastbourne Mews.		In Royal Free Hospital, son of French polisher, 2, scalded in the mouth by drinking hot water from the spout of a tea-kettle	*
In St. Thomas's Hospital, labourer, 40 (p.m.), fracture of skull and bruises on the body and limbs, by falling into a soap-frame at Great Suffolk-street, Borough	1 week	M. 42, found dead—apparently drowned, in Sir George Duckett's Canal.		Poison:—	
In St. Thomas's Hospital, fellowship porter, 73, mortification of right leg after compound fracture, caused by a sack of corn falling on it, whilst unloading a steam-boat off the Tower stairs	9 days	M. 60, drowned; no marks of violence—no proof how he came into the water (in water from 7 to 10 hours.)		M. 45 (post mort.), laudanum taken in overdose carelessly	*
In Charing Cross Hospital, porter, 50 (p.m.), mortification of left thigh after rupture of femoral artery and vein. Fell from the kerb under, and was run over by the wheels of an omnibus in St. Andrew's-street, Seven Dials	9 days	Labourer, 19, drowned while bathing in the Grand Surrey Canal accidentally (in water from 20 to 30 minutes.)		Wife of a butcher, 44 (p.m.), chronic bronchitis, accelerated by the effects of laudanum taken by her without suicidal intent	15 hours
In Guy's Hospital, ostler, 52 (p.m.), fracture of skull by a fall, from running against a cart wheel in Providence-row, Rotherhithe	4 weeks	Plasterer, about 50, suicide by drowning, being in a state of mental derangement from intemperance (in water some hours.)		M. 43 (no inq.), exhaustion from the over-use of stimulants	10 months
In Guy's Hospital, labourer, about 39 (p.m.), inflammation and abscess brought on by rupture of his bladder, from a kick on the lower part of the abdomen, at Morgan's-lane	1 month	F. 54, accidentally drowned by falling into the Surrey Canal (in water 30 minutes.)		delirium	4 days
		M. 17, accidentally drowned in the Thames, from the ship "Northumberland."			

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HEMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Syphilis:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		SHOREDITCH; Hoxton New Town.		M. 5 weeks, secondary syphilis	*
PADDINGTON; St. John.		M. 32, small pox (natural)	3 weeks	M. 3 months, syphilis	*
M. 10 months, variola	1 week	Haggerstone East.		Malformation:—	
pneumonia	30 hours	F. 1, small pox—convulsions	6 days	F. 12 days, anus imperforatus—rectum forming a cul-de-sac; inflammation of bowels and mortification—operation performed on 3d day.	
CHELSEA; South.		WHITECHAPEL; Mile End, New Town.		F. 12 (p.m.), deficient development of heart and blood vessels—contracted liver	4 months
F. 2, small pox (vaccinated)	10 days	M. 10 months, small pox (not vaccinated)	*	F. 7 days, malformation of heart (no medical attendant).	
St. GEORGE; Hanover-square.		North.		F. 6 months, spina bifida—atrophy	several weeks
M. 2, small pox (not vaccinated)	12 days	F. 1, variola	10 days	M. 1 day, morbus cæruleus.	
Belgrave.		STEPNEY; Mile End, Old Town (Lower).		M. 4 days, morbus cæruleus	4 days
M. 21, small pox (vaccinated when young successfully.)	14 days	M. 47, dysentery	3 weeks	Hernia, and Other Disease:—	
periarditis	*	small pox (whether vaccinated could not be ascertained).	8 days	F. 65 (ing.), natural—much exhausted after vomiting, from strangulated hernia	*
WESTMINSTER; St. John the Evangelist.		St. GEORGE, SOUTHWARK; Borough-road.		In Pancras Workhouse, F. 67, peritonitis connected with old hernia	*
M. 3, variola (not vaccinated)	14 days	F. 12, small pox (not vaccinated)	2 weeks	M. 31, ileus	2 days
F. 4 months, diarrhoea	14 days	LAMBETH; Waterloo (2nd part).		old case of reducible double inguinal hernia.	
variola (not vaccinated)	4 days	M. 14, variola confluent	*	F. 64, strangulated hernia	*
St. Margaret.		F. 2, variola	8 days	F. 23, strangulated hernia	3 days
F. 2, small pox (not vaccinated)	1 week	Church (1st part).		mortification of intestines.	
MARLBOROUGH; The Rectory.		F. 2, confluent small pox (not vaccinated)	7 days	M. 33, fever and ruptured bowel	*
M. 1, small pox (vaccinated successfully a month ago.)	7 days	Church (2nd part).		Diabetes:—	
PANCRAS Camden Town.		F. 1, variola (not vaccinated)	10 days	M. 64, diabetes	3 or 4 years
In Small Pox Hospital, M. 6, confluent small pox (unprotected)	18 days	pneumonia	3 days	cold and chill	5 days
Regent's Park.		F. 14, variola after cow pox	10 days	Stone:—	
M. 3, confluent small pox	7 days	catatrix visible.		No deaths in the abstract of the week under this head.	
ISLINGTON; East.		LAMBETH; Norwood.			
M. 9, confluent small pox (not vaccinated)	11 days	M. 9 months, small pox; previous debility not previously vaccinated.	10 days		
F. 7, small pox malignant	about 1 week	GREENWICH; St. Paul's, Deptford.			
vaccinated at Ilaves, Middlesex, at 3 months old—4 marks on one arm, one on the other, at death.		M. 22, small pox (first attack—not vaccinated)	14 days		
St. LUKE; Finsbury.		Woolwich Arsenal.			
F. 1, undeveloped small pox (not vaccinated)	*	In Royal Ordnance Hospital, M. 26 (p.m.), variola followed by erysipelas (vaccinated)	23 days		
		East.			
		M. 4, malignant small pox (not vaccinated)	17 days		

CHILD BIRTH, DELIRIUM TREMENS, INTemperance, &c. (continued).—

Childbirth:—	duration
The time elapsing from commencement of labour to death should invariably be returned.	
F. 29, puerperal peritonitis	2 days
F. 30, parturition	9 days
F. 31, parturition	7 days
F. 31, parturition	7 days
F. 21, puerperal fever	6 days
F. 30, parturition	6 days
F. 30, parturition	4½ days
F. 35, puerperal fever	2 days
F. 35, puerperal fever	4 days
F. 29, abortion; sympathetic fever, which produced exhaustion	5 weeks
F. 39, atrophy	4 years
F. 39, atrophy	4 years
F. 25, debility after parturition	5 days
F. 29, congestion of brain, ending in effusion	3 days
F. 28, abortion—diarrhoea	4 days
F. 28, abortion—diarrhoea	3 weeks
F. 28, puerperal convulsions	*
F. 35, exhaustion after delivery, consequent on excessive flooding previous to the birth of the child	11 hours
Other Cases:—	
F. 37, diseased heart	1 year
F. 30, child birth (6 months' child)	10 days
F. 30, child birth	4 days
F. 30, child birth	3 days
F. 30, child birth	3 days

Delirium Tremens:—	duration
M. 33, delirium tremens	3 weeks
M. 33, delirium tremens	*
F. 62, delirium tremens	1 week
F. 62, delirium tremens	*
M. 34, delirium tremens	*
M. 43, delirium tremens	6 weeks
M. 43, delirium tremens	3 weeks
Other Cases of Delirium Tremens:—	
M. 50, chronic hepatic disease—delirium tremens	*
M. 34, pneumonia	14 days
M. 34, pneumonia	14 days
Intemperance:—	
M. 52 (inquest), natural; apoplexy	8 hours
M. 52 (inquest), natural; apoplexy	8 hours
Privation, also Want, with Disease:—	
F. 70 (inquest), exhaustion caused by the want of the necessaries of life—no default	*
In Clerkenwell, M. 11, tubercular meningitis, 2 months great emaciation—death probably hastened by want	*
In St. John, Paddington, wife of a labourer, 35 (inquest), natural disease, with symptoms indicating disease of chest—not under medical treatment—had been a pauper in Paddington Parish, and at the time of death was in want of common necessaries of life	*

Want of Breast-milk; Inanition:—	duration
F. 4 months, want of breast-milk	*
M. 3 days, want of power, and defective nourishment	*
F. 5 weeks, inanition	*
M. 3 months, atrophy—want of breast-milk	*
M. 3 weeks, uropia of mother's milk	*
Purpura:—	
In St. Bartholomew's Hospital, M. 5 (p.m.), pertussis—purpura hæmorrhagica	*
In Guy's Hospital, M. 24, purpura	6 weeks
In Guy's Hospital, M. 24, purpura	2 weeks
Hæmorrhage, Hæmatemesis:—	
M. 36 (post mort., ing.), natural—exhaustion from loss of blood from the mouth and intestines	*
M. 48 (inquest), sudden—discharge of blood from the lungs	*
M. 2 weeks, abdominal hæmorrhage	*
F. 33, hæmorrhage from the rectum	1 month
M. 51, hæmatemesis	4 weeks
M. 31, melanæ	1½ years
M. 33, hæmorrhage from kidneys	12 days
Miscellaneous Cases:—	
In King's College Hospital, F. 35 (post mort.), ulceration of the cartilage of knee-joint	*
amputation of thigh	9 days
In St. Thomas' Hospital, F. 13 (post mort.), chorea—inflammation of spine	*
M. 1, laryngitis	4 days
tracheotomy performed—died during operation	*
F. 4, cephalitis from fright	14 days
Wife of a mariner, 35 (inquest), natural death from sudden shock to the nervous system, on the receipt of a letter, acting on a frame weakened by disease of the lungs and recent delivery	*
heart, 3; intemperance, 1; privation, 2; cholera, 3;	*

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Hæmorrhage, 2; apoplexy, 6; disease of violence, 25; other specified causes, 16; "found dead," "visitation of God," &c., 14.—TOTAL, 72 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 49.

Mr. B. Holl, registrar of Camden Town, states, that "Two children died of scarlatina, in Congreve-street, Maiden-lane. The parents are very poor, and live in a house of six rooms, each occupied by a distinct family." Also, that "A boy died of typhus in the Fever Hospital, who had been brought from Cross-keys-square, Little Britain, where his two brothers (the children of a widow) had previously died of typhus on the 4th and 6th November. The neighbourhood is crowded, and the house full of poor families."

Two children died of scarlatina in Trinity, St. Mary, Newington. Mr. Seagrave remarks, that "the house in which they lived (47, George-street, Harper-street, New Kent-road), is very damp, badly drained, and at all times a most unpleasant smell rises from the drain."

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 25th November, 1848.

Day.	Phases	Mean readings of the Barometer, from 12 Observations, (corrected and reduced to 32 degree Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Wind as deduced from Osler's Anemometer.			Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0—10	Ratio to toches, read at midnight																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																										
			Dry			Dew Point.	Highest in the sun, as shown by a self-registering Thermometer read at midnight	Lowest on the grass, as shown by a self-registering Thermometer read at midnight	In the Water of the Thames at Greenwich, by self-registering Thermometers, read at 9 o'clock next morning		Mean from 6	Greatest	Least	General Direction		Pressure in lbs. on the square foot

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was cloudless throughout the day.
MON.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. A gale of wind occurred at night, blowing with a pressure of 6 lbs. on the square foot.
TUES.	Nothing was shewn throughout the day.	The sky was cloudless till 10h. p.m. and overcast afterwards; rain was falling slightly at 11h. p.m. A fine aurora was visible during the evening, and the magnets were greatly disturbed.
WED.	Nothing was shewn throughout the day.	The clouds were slightly broken at noon, the sky was otherwise overcast throughout the day; cirrostratus and scud. Rain was falling generally during the evening.
THURS.	Nothing was shewn throughout the day.	The sky was overcast till 9h. a.m. and generally clear during the remainder of the day; cirrostratus and fragments of scud. Rain was falling at intervals during the evening.
FRI.	Nothing was shewn throughout the day.	Three-fourths of the sky were covered till noon, and mostly free from cloud afterwards; cirrostratus, scud, fleecy clouds and haze.
SAT.	Nothing was shewn throughout the day.	A few clouds prevailed till near noon, and overcast during the remainder of the day; cirrostratus and scud. A few drops of rain were falling during the evening.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See Phil. Trans. Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See Phil. Trans. Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The temperature of the water of the Thames is ascertained by the use of self-registering thermometers, suspended from the side of the Dreadnought Hospital Ship, at the depth of about 2 feet below the surface. The readings of this instrument are registered under the superintendence of Lieutenant Sanders, R.N., Superintendent of the Dreadnought. The mean reading of a thermometer placed on the mainmast, and read each day at 6h. a.m. was 44.3; and the mean reading at 6h. p.m. was 49.2; the mean readings at the Royal Observatory for the same times were 44.0 and 46.9 respectively.

The trunk within which the Thermometers are suspended for the temperature of the water of the Thames, was away during the week, for repair.

Births and Deaths registered in London,
During the Week ending Saturday, December 2nd, 1848.

The table is read thus:—Five men at the age of 25 years, and less than 35, died after illness of 18 hours and less than 24 hours.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, 2nd Dec.

Four are cases in which Inquests were held: the remainder are all certified by Medical Attendants.

HACKNEY; Hackney, South.

At London-lane, South Hackney, in a private Lunatic Asylum, spinster, 40, "malignant cholera (2 days)."

Hackney, West.

Girl, 3, "cholera (16 hours)."

ST. LUKE; City-road.

At Richards-place, Old-street, son of a labourer, 2, "cholera (3 days)."

In same house, wife of a labourer, 34, "cholera (12 hours)."

The medical attendant of the above cases states, "That the mother had been delivered of a child (about three weeks before) which died of cholera after two or three days' illness. She was in close attendance on her child night and day, and the disease, with extreme collapse, was the result. The house is confined, without any yard or outlet, and one or two persons have been removed from the next house into the workhouse."

WEST LONDON; North.

In St. Bartholomew's Hospital, M. 4, "cholera."

SHOREDITCH; Hoxton New Town.

In St. Luke's Workhouse, M. 22, "cholera (20 hours)."

In same Workhouse, F. 40, "spasmodic cholera (27 hours)."

SHOREDITCH; Haggerstone, East.

F. 31, "Asiatic cholera (6 days), puerperal fever (3 days)."

F. 2, child of the former, "cholera (10½ hours)."

Mr. Burchell, the medical attendant, states that "The woman was seized with Asiatic cholera on the evening of Nov. 21st, from which on the 23rd she was slightly recovering, inasmuch that as the cramp, &c. had subsided in a great measure, and warmth in the extremities was gradually becoming restored. She was taken in labour during the day, and was delivered of a dead child at 3 o'clock, A.M. on the 24th, after which she sunk into a state of puerperal fever of a typhoid character, and died at 6½ o'clock, A.M. on the 27th, after an illness altogether of six days' duration."

Mr. Ditchman, the Registrar, adds, "That he visited the spot and found the house so situated that about 10 or 12 feet was the only space between the backs of the houses in Ann's-place and Goldsmiths-row. A privy, serving two houses, stands on the edge of an open sewer, three or four feet wide (out of the above space of 10 or 12 feet), which sewer extends from Talavera-place, Margaret-street, to Chapman's-gardens, a distance of 300 or 400 yards, in part covered with old boards, but for the most part open and the receptacle of all kinds of refuse. The parochial authorities have no control whatever, as it belongs to the Commissioners of Sewers, to whom repeated letters of complaint have been written by the Clerk of the Four Rate Board, who has received no reply."

WHITECHAPEL; The Artillery.

M. 5, "epidemic cholera, (6 days); consecutive fever and congestion of the brain (5 days)."
F. 13, "epidemic cholera (4 days)."

In addition to the above two cases, another death (not yet registered) took place on the 25th in the same house. A verdict was returned, "sudden death from Asiatic cholera, (5 hours)." It was the case of a boy, 2 years and 8 months old. Mr. Mason, the Registrar, adds, that "the neighbourhood is crowded and dirty, but the court is not more confined than many streets in Spitalfields."

North.

M. 50, in Boar's Head-yard, Petticoat-lane, "cholera Asiatica (30 hours)."

Mr. Chapman, the Registrar, states, that "the houses are occupied principally by the lower order of Irish; that they are not well drained, but water is good and plentiful."

WHITECHAPEL; Goodman's Fields.

At 21, White Bear-court, Lambeth-street, F. 53, "Asiatic cholera, (18 hours)."
ST. GEORGE IN THE EAST; St. John.
At 7, Anchor and Hope-alley, wife of a mariner, 50, "natural death—Asiatic cholera (20 hours)."—Inquest.
In the same house, wife of a mariner, 29, "natural death—Asiatic cholera, (20 hours)."—Inquest.

STEPNEY; Mile End, Old Town, Lower,
F. 29, "English cholera, typhus, brain fever."

POPLAR; Sub-District Poplar.

M. 6, "natural death, sudden, from cholera, (17 hours)."—Inquest.

BERMONDSEY; St. James.

M. 36, "Asiatic cholera, (11 hours)."

LAMBETH; Brixton.

F. 40, prisoner in the House of Correction, at Brixton, "natural death—Asiatic cholera, (38 hours)."—Inquest.

GREENWICH; Greenwich West.

In Dreadnought Hospital, M. 54, "cholera, (p.m.)."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 47.

(The tabular abstract on the first page is for the week ending Saturday, Dec. 2nd. The following selection of cases is made from the Returns for the week ending Nov. 25th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Fractures and Contusions (continued):—	duration	Hanging and Suffocation:—	duration
In London Hospital, licensed-victualler, 39, fracture of ankle from an accidental fall . . . 11 days		In Guy's Hospital, chief-mate of the Little Western steam-boat, 55, bronchitis in a bad constitution, induced by fractured leg and immersion, by falling through the paddle-box of the steamer, at Ramsgate . . . 13 days		Dock labourer, 35, strangled himself in a temporary state of insanity.	
In London Hospital, distiller's man, 31, accidental fall from a ladder, died same day.		F. 85 (no inq.), fracture of neck of femur, by falling from an ottoman . . . 5 weeks		In London Hospital, wife of a marker in the docks, 40, found dead in bed; apparently suffocated by turning over.	
In London Hospital, foreman at the Bull, Aldgate, 44, accidental fall from a window sill, and dislocation of shoulder . . . 2 days		gangrene of legs . . . 2 weeks		Burns and Scalds:—	
In Guy's Hospital, shipwright, 61, compression of the brain, by falling from a ship into the Fountain dry-dock, Bermondsey . . . 12 hours		In Guy's Hospital, son of a porter, 12 (p.m.), fracture of his skull by being thrown from a cart, at Clapham-road, from the pony running away . . . 36 hours		M. 37 (no inquest) extensive injury from a burn on the arm . . . 5 weeks	
In Guy's Hospital, widow of a lath vender, 71, effects of a fracture of her right thigh, by falling down stairs, at Vauxhall-row . . . 1 month		The following case was placed to rheumatism in abstract.		In London Hospital, son of a basket-maker, 4, accidental from burns . . . *	
In Guy's Hospital, daughter of a baker, 12 (post mort.), rupture of an artery on the brain, by falling from a window sill, whilst cleaning windows, at Princes-place, Bermondsey . . . 5 hours		F. 71 (no inq.), chronic rheumatism . . . about 30 years		In Guy's Hospital, widow of a carpenter, 96, burnt by her clothes taking fire whilst alone in her room, at Hunter-street, Old Kent-rd., 9 hours	
In London Hospital, labourer, 33, accidentally run over by a railway carriage, causing lacerated wound and erysipelas . . . *		aggravated by a severe fall about 6 weeks ago, from which she never fully rallied.		Son of a coachman, 3, burns by fire—clothes taking fire accidentally . . . 30 hours	
In London Hospital, labourer, 42, accidentally crushed in his leg by a railway break van . . . 6 hours		Wounds:—		In London Hospital, son of a grocer, 4, accidentally scalded by the contents of a teapot of boiling tea . . . 1 day	
In London Hospital, labourer, 40, hand accidentally crushed by a railway-engine . . . 2 months		F. 47, cut her throat in a temporary state of insanity.		M. 1 (no inq.), scald of axilla and arm, by the upsetting of coffee . . . 4 weeks	
In London Hospital, boot-maker, 53, fall from an omnibus, how caused unknown—injured leg . . . 2 months		In London Hospital, F. 30 (no inq.), punctured wound of hand, and absorption of matter from gangrenous surface . . . *		irritation of brain from teething and sore, 6 days	
		axillary abscess . . . 19 days		Poison:—	
		pleuropneumonia . . . 9 days		M. 37, poisoned himself with arsenic in a temporary state of insanity . . . *	
		Drowning:—		In London Hospital, single woman (without occupation), 21, taking oxalic acid in an unsound state of mind . . . 1 day	
		No deaths in the abstract of the week under this head.			

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION,

PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Small Pox (continued):—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		SHOREDITCH; St. Leonards.		GREENWICH; St. Paul's, Deptford.	
KENSINGTON; Fulham.		In Lunatic Asylum, Hoxton House, F. 52, confluent small pox (not vaccinated) . . . 11 days		M. 1, small pox . . . 10 days	
3 months, variola . . . 9 days		mania . . . 7 months		(first attack—not vaccinated.)	
WESTMINSTER; St. John the Evangelist.		Haggerstone West.		F. 13, small pox (first attack—not vaccinated) 18 days	
15, variola confluent . . . 8 days		F. 6 months, small pox . . . *		Woolwich Dock Yard.	
(vaccination doubtful.)		(twice vaccinated without effect.)		M. 4, small pox (not vaccinated) . . . 9 days	
5, variola (not vaccinated) . . . 14 days		BETHNAL GREEN; The Church.		Syphilis:—	
6, variola (not vaccinated) . . . 16 days		M. 8 weeks, small pox . . . *		F. 18, syphilis . . . 18 months	
St. Margaret.		WHITECHAPEL; North.		F. 3 months, syphilis—convulsions . . . 1 day	
1, small pox . . . 8 days		M. 11 months, small pox (1st attack) . . . 9 days		F. 39, syphilis—secondary consumption . . . *	
convulsions . . . 1 day		(vaccinated 2 months ago without effect.)		Malformation:—	
under 1, variola confluent (not vaccinated) 6 days		STEPNEY; Mile End, Old Town (Upper).		M. 3 days, malformation of heart.	
MARYLEBONE; The Rectory.		F. 6 months, small pox (not vaccinated) . . . 6 days		F. 2 months, spina bifida.	
2, small pox . . . 11 days		ST. SAVIOUR; St. Saviour.		M. 4 months, malformation of heart.	
successfully vaccinated 2 weeks ago.		In Guy's Hospital, M. 25, variola . . . *		F. 14 days, hepatic engorgement—congenital absence of gall bladder.	
St. Mary.		ST. GEORGE, SOUTHWARK; Borough-road.		M. 14 days, malformation of lower jaw.	
25, confluent small pox . . . 15 days		M. 5 months, small pox . . . 14 days		F. 2 weeks, spina bifida.	
PANCRAS; Camden Town.		(not vaccinated—no medical attendant.)		Hernia:—	
Small Pox Hospital, M. 21, small pox confluent . . . 12 days		LAMBETH; Waterloo (1st part.)		M. 9 weeks, convulsions . . . 1 hour	
(said to have been vaccinated when young at Wales—no cicatrix.)		M. 4, small pox—effusion on the chest . . . *		hernia . . . congenital	
Small Pox Hospital, M. 4, small pox, semi-confluent (unprotected) . . . 26 days		(vaccinated in infancy without effect.)		In St. Bartholomew's Hospital, M. 54, hernia—operation . . . *	
Small Pox Hospital, F. 12, unprotected small pox, confluent, hemorrhagic . . . 3 days		F. 5, small pox . . . 13 days		In St. Bartholomew's Hospital, F. 20 (p.m.), peritonitis—strangulated intestine . . . *	
Small Pox Hospital, F. 25, small pox confluent . . . 17 days		(vaccinated 3 times in infancy without effect)		In St. Bartholomew's Hospital, F. 42, hernia—operation—peritonitis . . . *	
(vaccinated when young at Bootham, near Maidstone; two small cicatrices.)		Church (2nd part.)		Diabetes; Stone:—	
		M. 1, variola . . . 12 days		No deaths in the abstract under either of these heads.	
		secondary fever . . . 9 days		Pulmonary Disease and Diabetes:—	
		(vaccinated at 7 months without effect.)		F. 47, hæmoptysis from pulmonary disease—diabetes . . . *	
		Kennington (1st part.)			
		F. 11 months, small pox (natural) . . . 10 days			
		Norwood.			
		M. 19, small pox (not vaccinated) . . . 13 days			

Childbirth:—	duration
The time elapsing from commencement of labour to death should invariably be returned.	
F. 34, puerperal peritonitis	4 days
F. 17 (p.m.), childbirth—flooding from adherent placenta	1 month
F. 33, abortus—peritonitis into the peritoneum and pleura	3 weeks
F. 34, puerperal fever	5 days
F. 32, puerperal fever	8 days
F. 33, abortus—peritonitis—diarrhoea	*
F. 33, puerperal fever	5 days
F. 22, puerperal fever	*
F. 44, puerperal fever	14 days
F. 33, puerperal peritonitis	5 days
F. 32, puerperal peritonitis	6 days
F. 28, puerperal fever	6 days
F. 28, puerperal fever	2 days
(malignant) 5 days after confinement.	
F. 33, childbirth	4 days
peritonitis—puerperal fever	3 days
F. 38, childbirth	8 days
puerperal fever	3 days
F. 38, puerperal fever	4 days
F. 36 (inquest), natural death in childbirth	*
F. 39, meningitis	4 days
* childbirth	8 days

Childbirth (continued):—	duration
F. 29, childbirth	8 weeks
debility	
F. 27, childbirth	4 days
erythema	*
typhoid fever	2 days
ptechia	*
F. 34, premature confinement	7 days
pleuro-pneumonia	5 days
F. 22, childbirth	11 days
hidrosis	7 days
Disease and Childbirth:—	
F. 37, morbus cordis	some time
anasarca	7 days
sunken after childbirth	
F. 25, pulmonary disease following childbirth	*
See the cases of cholera for the same week.	
Delirium Tremens:—	
M. 51, delirium tremens	some weeks
F. 29, delirium tremens	1 year
F. 39, delirium tremens	3 weeks
M. 54, delirium tremens	2 weeks
typhus	*
M. 50, delirium tremens	3 days
M. 43, delirium tremens	2 days

Intemperance; Privation:—	duration
No deaths in abstract under either of these heads.	
Want of Breast-milk; Inanition:—	
M. 7 months (inquest), natural—atrophy from want of mother's milk	*
F. 3 weeks, inanition	*
Purpura:—	
F. 6 months, purpura	8 weeks
M. 3, scurvy	*
Hæmorrhage, Hæmatemesis, &c.:—	
F. 7 hours, hæmorrhage from the umbilicus	*
M. 73, natural decay from the breaking of a blood-vessel	1 year
F. 30 (inquest), natural death from the rupture of a large vessel internally	sudden
Miscellaneous Cases:—	
F. 60, ovarian dropsy	of long standing
tapped 10 times.	
spasm of diaphragm	*
In St. Thomas' Hospital, F. 27 (p.m.), ascites—remarkable loose cyst in left auricle, about an inch in size—one kidney atrophied—morbus Brightii	

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Hæmorrhage, 1; apoplexy, 4; disease of heart, 3; childbirth, 1; cholera, 5; violence, 21; other specified causes, 16; "found dead," "natural death," "visitation of God," &c., 7.—TOTAL, 53 cases.
THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 44.

Mr. Butterfield, Registrar of Islington East, states, that his "return for week ending Nov. 25, (comprising 32 births and 26 deaths,) is the largest since the epidemic of influenza. Measles and scarlatina are very prevalent in the district; and a very large number of the labouring classes are out of employment."
In St. James', Clerkenwell, a man of 52 years, died of gout (ill 4 days)." The medical attendant certifies, that "typhoid symptoms quickly supervened, from the defective state of the drainage on the premises."
In sub-district of Shadwell and Wapping, the Inspector of Nuisances died at the age of 65, of fever, after 8 days' illness, and only 16 days after appointment to his office.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 2nd December, 1848.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the week.	The sky was partially covered with cirrostratus and scud till about 6h. p.m. when it became completely overcast, and continued so until midnight when a light rain commenced falling.
MON.		The sky was overcast throughout the day with cirrostratus and scud, except for a short period about 3h. p.m. Rain fell between midnight and 7h. a.m.
TUES.		The sky was overcast with cirrostratus and scud till about noon when the clouds became broken, remaining so till about 7h. 30m. p.m., at which time the sky became again overcast and continued so until midnight.
WED.		The sky was overcast throughout the day with cirrostratus and scud. Light rain fell occasionally between 6h. p.m. and midnight.
THURS.		The sky became cloudless at about 6h. a.m. and continued so till near noon, when it became overcast and remained so until midnight. Rain for a short period between 1h. and 5h. a.m.
FRID.		The sky was overcast with cirrostratus and scud throughout the day except at about 6h. a.m. and 3h. p.m., when the clouds were broken for a short period. Rain fell heavily from about 10h. 30m. until midnight when it ceased. A very severe squall of wind and hail occurred at about 11h. p.m. lasting about 15 minutes.
SAT.		The sky was about one-half covered at 3h. p.m., light clouds of small amount were generally prevalent at other times during the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10, and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Galsier, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Galsier from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 6h. a.m. was 45.4; and the mean reading at 6h. p.m. was 46.4; the mean readings at the Royal Observatory for the same time were 45.3 and 45.8 respectively.

At the end of this week the thermometer used for the temperature of the Thames water were replaced.

Births and Deaths registered in London,

During the Week ending Saturday, December 9th, 1848.

The table is read thus:—Five men at the age of 25 years, and less than 35, died after illness of 18 hours and less than 24 hours.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, 9th Dec.

Three were cases in which Inquests were held: the remainder are all certified by Medical Attendants.

In Chelsea (North-west sub-district) a man aged 21 years, and a woman 36 years, died “from the mortal effects of want and destitution,” according to the verdicts of a Coroner’s jury. Mr. Lanier, the Registrar, states, that “the deaths occurred in Chelsea Workhouse. The deceased persons had made application on Saturday evening for a night’s lodging, which was granted. They complained of illness on Sunday morning, when they were immediately admitted into the sick wards, and promptly attended by the Medical Officer of the establishment, who found them both labouring under strong attacks of malignant cholera, according to his evidence at the inquests. Both man and woman belonged to the class called tramps; they died, the former on Sunday, the latter on the day following.”

ST. GILES; South.

M. 23, “cholera (24 hours.)”

STRAND; St. Clement Danes.

M. 58, “epidemic cholera (2 days.)”

— St. Anne, Soho.

M. 1, “cholera Asiatica (10 hours.)”

ST. LUKE; Finsbury.

At 50, Old-street, widow of a porter, 51, “bilious cholera.”

SHOREDITCH; Haggerstone West.

M. 37, “cholera Asiatica, (13 hours.)”

BETHNAL GREEN; The Green.

F. 60, “cholera (12 days.)”

WHITECHAPEL; Spitalfields.

F. 32, “epidemic cholera, (16 hours.)”

— Whitechapel Church.

In London Hospital, M. 19, “Asiatic cholera, (14 hours,)” (p.m.)

In same Hospital, F. 20, “Asiatic cholera (10 hours.)”

— Goodman’s Fields.

At 7, Gower’s-place, Gower’s-row, a labourer 55, “Asiatic cholera (34 hours.)”

ST. GEORGE IN THE EAST; St. John.

At 2, Lower Well-alley, daughter of a biscuit-baker, 9, “natural death, sudden, from cholera (26 hours.)”—Inquest.

STEPNEY; Mile End Old Town, Lower.

F. 8, “Asiatic cholera (20 hours.)”

POPLAR; Bow.

At Dye House-lane, Old Ford, Bow, F. 2, “spasmodic cholera (5 days.)” Another case of cholera, not yet registered, has occurred in Dyer’s-lane, Bromley, during last week, on which an inquest has been held. The verdict was “natural death from spasmodic cholera (14 hours.)”

ST. OLAVE; St. Olave.

At 2, Magdalen-court, on 3d Dec., son of a musician, 4, "cholera (12 hours), reaction did not take place."

BERMONDSEY; Leather Market.

M. 11, "cholera (47 hours,) supposed to have been induced by eating bad fruit."

LAMBETH; Lambeth Church (2nd part.)

At 97, Park-street, shoemaker, 35, "cholera (48 hours.)"

At 2, Francis-court, son of a bricklayer, 2, "cholera (3 days), convulsions."

CAMBERWELL; Camberwell.

In Camberwell Workhouse, M. 61, formerly a leather-seller, "English cholera (10 days.)"

WANDSWORTH AND CLAPHAM; Battersca.

At Sleaford-street, wife of a labourer, 50, "cholera (6 days), consecutive fever, terminating in coma."

In addition to the above may be mentioned a death from Asiatic cholera (after 16 hours' illness) which occurred in the week ending Dec. 2, and is stated by Mr. Baddeley, the Registrar of Mile End Old Town, (Upper), to be the first amongst adults which has occurred in his large district. The deceased was a gentleman aged 56 years, who lived at No. 6, Redman's Row. The street is wide and airy, and may be considered healthy. The case is not yet officially returned, as it became the subject of inquest, and the entry has not been signed by the coroner.

Also, Mr. Watts, the Registrar of the West District of Islington states that "a death from malignant cholera (not yet registered for the same reason as above,) occurred on the 3d inst. at Islington Workhouse, after an illness of 16 hours. An inquest was held on the 6th. The deceased, a female, aged 23, was, while under the attack, brought in a cab from a house of ill repute in the East district, and received into the Workhouse, where she died soon afterwards. Although the Workhouse affords accommodation for 400 persons, it is at the present time so crowded, that it is necessary to find room in many private houses for fresh applicants. It is, however, free from sickness. Five Inspectors of Nuisances were elected last week for the whole parish of Islington, who have already entered on their duties."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 48.

(The tabular abstract on the first page is for the week ending Saturday, Dec. 9th. The following selection of cases is made from the Returns for the week ending Dec. 2nd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns and Scalds:—	
M. 47 (<i>no inq.</i>), injury to the right lung from a fall—nervous collapse consequent thereon (in connexion with disease of heart).....	1 week	M. 30 (<i>no inq.</i> , <i>p.m.</i>), laceration of spongy portion of urethra, from a catheter—hemorrhage from urethra	3 days	M. 1, accidental death from burns, clothes having taken fire	3 days
F. 60, scalp injury from a fall, having been thrown down (manslaughter against Mary Ann West)	*	M. 53, cut his throat in a temporary state of insanity.	*	In St. Thomas' Hospital, son of a labourer, 4, burnt by his clothes taking fire at Francis-street, Westminster-road	17 hours
Cabin-boy, 12, found dead in the Thames, with fracture of skull—how received no legal proof (in water 31 days).		M. 37, cut his throat in a temporary state of insanity.	*	In Guy's Hospital, widow of a brewer's servant, 36, exhaustion from burns by her clothes taking fire (at Long-lane, Bermondsey) whilst in an epileptic fit	4 days
Sawyer, 45, mortal contusion, having been struck on the head by a piece of timber falling to the ground accidentally.....	instant	Drowning:—		In Guy's Hospital, daughter of a zinc roller maker, 6, burnt by her clothes taking fire (at Kennington).....	24 hours
M. 8, injuries to the head—having been crushed under a tree, which was blown down by the wind in Greenwich Park.....	instant	Clerk to a dyer, 18, suicide by drowning—no sufficient proof as to state of mind (found dead in the Thames.)		In Guy's Hospital, son of a labourer, 5, burnt by his clothes taking fire (at New Cross)	22 hours
Son of a chair-carer, 4, accidentally run over and crushed on the head by a cart on a highway	*	M. about 35, drowned—no marks of violence—no proof how he came into the water (4 days in water.)		In St. Bartholomew's Hospital, daughter of a cabinet-maker, 12, burnt by her clothes taking fire (at Finsbury).....	6 hours
M. 52, erysipelas	8 days	F. newly born, found dead in the Thames—no marks of violence—no proof whether born alive (about 12 hours.)		In St. Bartholomew's Hospital, daughter of a porter, 3, burnt by her clothes taking fire (at Saffron-hill).....	3 hours
injury on the face—he was engaged in a fight with two marines, 13 days before death.		F. 53, suicide by drowning herself, being of unsound mind, resulting from intemperate habits.		Poison:—	
F. 76, suddenly from natural causes after a fall	*	Labourer, 38, accidentally drowned by falling into the Surrey Canal, being seized with a fit (in water 15 minutes.)		Barman, 21, suicide with arsenic in unsound mind	*
F. 83, apoplexy after an accidental fall	*	Hanging and Suffocation:—		In St. Bartholomew's Hospital, watch-maker, 36, poisoned himself with corrosive sublimate	4 days
Ship's cook, about 49, injuries from accidentally falling down the hold of a ship	3 days	M. 34, accidentally choked while eating	*	temporary insanity.	
M. 68 (<i>no inq.</i>), injury to the hip	4 months			F. 35 (<i>no inq.</i>), colica pictonum	*
bronchitis—diarrhoea	*				

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HEMORRHAGE, HEMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Malformation:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		PANCRA8; Camden Town (continued).		M. 4½, blue from birth; asphyxia.	
PADDINGTON; St. John.		In Small Pox Hospital, F. 21, small pox, confluent, unprotected	14 days	M. 1 week, malformation of rectum.	
F. 4 months, small pox (not vaccinated).....	12 days	In Small Pox Hospital, F. 30, small pox, confluent, unprotected	11 days	M. 20, morbus cereulens	7 months
CHELSEA; South.		ISLINGTON; East.		pulmonary apoplexy.....	3 days
M. under 1, confluent small pox	8 days	F. 11, variola, semiconfluent (not vaccinated) ..	15 days	M. 16, malformation of heart	from birth
ST. GEORGE; Hanover-square; Belgrave.		SHOREDITCH; Haggerstone, West.		high fever	*
10 months, small pox (not vaccinated.)		M. 36, variola	2 weeks	F. 2 weeks, cyanosis.	
no medical attendant.		vaccinated when a child.		Hernia:—	
WESTMINSTER; St. John the Evangelist.		BETHNAL GREEN; The Green.		M. 29, (post. mort.), internal strangulation ..	5 days
F. 5, variola confluent	13 days	F. 2, variola (not vaccinated)	5 days	M. 66, umbilical hernia—strangulated bowels ..	48 hours
successfully vaccinated in infancy.		STEPNEY; Mile End, Old Town (Lower).		Diabetes; Stone:—	
St. Margaret.		F. 9, small pox (not vaccinated)	12 days	No deaths in abstract of the week under either of these heads.	
15, small pox (not vaccinated).....	2 weeks	ST. GEORGE, SOUTHWARK; Borough Road.		Childbirth:—	
MARYLEBONE; The Rectory.		M. 8, small pox (not vaccinated).....	14 days	The time elapsing from commencement of labour to death should invariably be returned.	
F. 4, variola	10 days	London Road.		F. 36, puerperal peritonitis	*
vaccinated unsuccessfully when two months old.		M. 3, variola—pneumonia (not vaccinated) ..	*	At Consumption Hospital, a servant therein,	
1, variola	8 days	ST. MARY, NEWINGTON; Trinity.		26, puerperal peritonitis	11 days
vaccinated successfully at six months.		F. 1, small pox (unprotected)	1 week	F. 29, collapse from rheumatic fever supervening on puerperal peritonitis 6 days after delivery	
PANCRA8; Gray's Inn Lane.		vaccinated twice without effect.		F. 42, puerperal peritonitis	5 days
F. 3 weeks, small pox (not vaccinated).....	14 days	GREENWICH; Woolwich Arsenal.		F. 37, puerperal fever	7 days
Camden Town.		M. 4, small pox (not vaccinated).....	11 days	F. 31, puerperal peritonitis	3 days
Small Pox Hospital, M. 26, small pox, confluent, unprotected	6 days	no medical attendant.		F. 31, childbirth	8 days
Small Pox Hospital, F. 7, small pox, confluent, unprotected	10 days	Syphilis:—		fever	4 days
Small Pox Hospital, F. 22, small pox, confluent	5 days	F. 4 months, syphilis—convulsions.....	*	F. 29, puerperal peritonitis	6 days
vaccinated, when young, in London—four or five imperfect cicatrices—had small pox three years ago, some marks of which remain.		M. 1, sloughing ulcer in groin.....	3 weeks	F. 28, (post. mort.), puerperal peritonitis ..	5 days
		Quere, Syphilis?		F. 31, puerperal peritonitis	2½ days
				F. 25, peritonitis	7 days
				Query. Did this occur after childbirth?	
				F. 31, puerperal convulsions.....	30 days
				followed by mania—fever	6 days
				F. 21, childbirth.....	5 days
				hysteritis	3 days
				F. 28, internal hæmorrhage from the uterus during pregnancy.....	6 days
				F. 41, childbirth.....	*

<i>Primary Disease followed by Childbirth:— duration</i>		<i>Privation; Want of Breast-milk; Inanition:—</i>		<i>Purpura:—</i>	
F. 21, scarlatina maligna	5 days	F. 4 mouths, inanition.		F. 76, insanity—purpura	duration
childbirth	7 days	F. 6 months, (inquest), natural death from want of breastmilk.	*	<i>Hæmorrhage, Hæmatemesis:—</i>	
F. 36, disease of the heart	*	F. 3 weeks, atrophy—brought up by hand.	2 weeks	F. 31, general hæmorrhage.	some years
childbirth	20 hours	M. 9 days, inanition	*	serous effusion into arachnoid	20 hours
<i>See also the List of Cholera Cases for the week.</i>		<i>Phthisis and Privation:—</i>		F. 43, rupture of a blood-vessel of the heart (found dead in bed).	
<i>Delirium Tremens:—</i>		<i>In Workhouse, Bishopsgate, F. 60, phthisis.</i>		<i>Miscellaneous Cases:—</i>	
M. 40, epistaxis	3 days	destitution	*	M. 4 days, very small and diseased at birth; covered with a leprous, coppery, desquamating eruption.	
delirium tremens	2 days	<i>Bronchitis and Privation:—</i>		F. 1, (post mort.), meningitis	1 month
M. 30, delirium tremens	12 days	In Camden Town, M. 61, (inquest), pauper, bronchitis—was discharged from the workhouse while labouring under the disease, on an allowance inadequate for his lodging and maintenance out of it—bronchitis terminating fatally		sloughing of neck from blister	2 weeks
M. 42, delirium tremens	6 days			In Charing Cross Hospital, M. 45, inflammation of kneejoint	6 weeks
effusion	*			amputation	52 hours
M. 44, delirium tremens	5 days			F. 47, anxiety of mind and distress producing emaciation and disease of the brain	6 years
<i>Intemperance:—</i>					
M. 32, (inquest), natural death; suddenly—accelerated by excess in drinking	*				

A boy aged 14 years died of typhoid fever after four weeks' illness in Plummer's Court, High Holborn, which, the Registrar states, is very defectively drained

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD—Apoplexy, 5; disease of the heart, 3; cholera, 4; intemperance, 1; privation, 1; violence, 1; other specified causes, 12; "found dead," "natural death," "visitation of God," &c., 16.—TOTAL, 68 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 40.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH

During the Week ending Saturday, 9th December, 1848.

Day.	Phases of the Moon	Mean readings of the Barometer, from 12 Observations, (corrected and reduced to 32 degree Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Wind as deduced from Osler's Anemometer.				Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 6-10																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																								
			Dry			Dew Point Highest in the sun, as shown by a self-register- ing Thermometer read at midday	Lowest on the grass, as shown by a self-register- ing Thermometer read at midnight	In the Water of the Thames at Greenwich, by self- registering Thermometers, read at 9 o'clock next morning		Mean from 6 Diffs. DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the week, except at midnight on the 5th day, and at 3h. p.m. on the 6th day, when strong negative electricity was shewn.	The sky was overcast throughout the day with thin cirrostratus and scud, except at about 5h. p.m. when the clouds were broken for a short period. Part of a Solar halo was faintly discernible about noon.
MON.		The sky was overcast throughout the day with cirrostratus and scud, except for a short period about 6h. p.m. Heavy squalls of wind and rain occurred occasionally between noon and midnight. A faint lunar halo was observed about 5h. 30m. p.m.
TUES.		The sky was variably covered with clouds throughout the day. Heavy squalls of wind and rain occurred before 6h. a.m. and between 6h. p.m. and midnight. The lowest reading of the Barometer was 28.834 in., and it occurred about 6h. a.m.
WED.		The sky was overcast throughout the day except at about 6h. a.m., and midnight, when it was clear for a short period. Rain fell at intervals throughout the day.
THURS.		The sky continued partially clear till about 9h. a.m., when it became overcast with cirrostratus and scud, and after this time thin rain fell almost continuously until midnight.
FRI.		The sky was overcast throughout the day with cirrostratus and scud. Fine rain fell continuously during the day.
SAT.		The sky became cloudless about 1h. a.m., and continued nearly so till about noon, when it became partly covered with light clouds, which continued during the remainder of the day.

The height of the eisers of the meter is considered to be 159 feet above mean level of the sea. The readings harometer are considered to be coinc with those of the Royal Society's flint standard barometer. The amount of is estimated by considering a clear sky represented by 0, a cloudy sky by 10 when partially cloudy by estimation number of tenths of the whole sky co with cloud. The observations are at intervals of three hours from 6h. a. 6h. p.m., and at midnight. The me the values observed at these times are verted into mean daily values by the cation of corrections, deduced by Galsler, from five years' observations ing December 31, 1845.—See Phil. 2 Part. 1, 1848.

The readings of the two self-regist thermometers, the one placed in th rays of the sun, and the other plac grass fully exposed to the sky, are every midnight, and therefore exhib highest and lowest readings respect that have occurred in the previous 24l They are, however, placed here op to the civil day which precedes th which the thermometers are read.

The average temperature of the that determined by Mr. Galsler from two-hourly observations taken at the Observatory, Greenwich, in the 7 ending 1847, December 31.—See Trans. Part 1; 1848.

• In reading the 16th column, it w borne in mind that + is read "high and — "lower," than the average.

The mean reading of a thermo placed on the mainmast of the Dreadn Hospital Ship, and read each day a a.m. was 48°3; and the mean readi 6h. p.m. was 49°5; the mean readi the Royal Observatory for the same were 48°3 and 49°7 respectively.

Births and Deaths registered in London,
During the Week ending Saturday, December 16th, 1848.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, 16th Dec.

Seven were cases in which Inquests were held: the remainder are all certified by Medical Attendants.

CHELSEA; South.
F. 30, "malignant cholera, (84 hours.)"
WESTMINSTER; St. John.
Prisoner in the Millbank Prison, M. 56, "Asiatic cholera, (about 14 hours.)"
p.m.—Inquest.
Prisoner in the same institution, M. 63, "Asiatic cholera, (about 14 hours.)"
—Inquest.
Prisoner in the same institution, M. 27, "Asiatic cholera, (about 8 hours.)"
—Inquest.
ISLINGTON; West.
F. 21, "malignant cholera (16 hours.)"—Inquest.
WEST LONDON; North.
In St. Bartholomew's Hospital, F. 12, "cholera."

BETHNAL GREEN; Church.
In Garden-place, Hope Town, on Dec. 1st., M. 7, sudden death from cholera (12 hours.)"—Inquest.
In same family, on Dec. 3, F. 5, "sudden death from cholera (3 days.)"
—Inquest.
The above two cases are not yet registered. Mr. Reynolds states, that "the place in which they occurred, as indeed the whole of his district, is low, confined, swampy, and without drainage. Garden-place is far from being the worst in the neighbourhood. Subsequently to the deaths the houses have been thoroughly cleansed, and the cesspools emptied. The present state of weather, and the want of sewerage, begin to produce fevers of all kinds in the district."
—Hackney-road.
M. 3, "English cholera (7 days.)"

WHITECHAPEL; Mile End New Town.

In Christchurch Workhouse, M. 50, "malignant cholera (18 hours.)"
In same workhouse, M. 15, "cholera (4 days), congestion of brain (1 day.)"
In same workhouse, M. 5, "cholera (60 hours.)"
In same workhouse, M. 13, "contagion; malignant cholera (4 days.)"

Goodman's Fields.

At 21, White Bear-court, Lambeth-street, M. 15, "Asiatic cholera, collapse (3 days), consecutive fever (8 days), ulceration of the cornea of the left eye on the 9th day, total blindness and deafness on the morning of the 10th. He died on the 11th day of the illness."

Aldgate.

M. 36, "Asiatic cholera (10 hours.)"
F. 5, "cholera (18 hours.)"

ST. GEORGE IN THE EAST; St. Mary.

M. 35, "natural death, sudden from cholera (15 hours.)"—Inquest.

STEPNEY; Limehouse.

M. 42, "diarrhoea (1 week), Asiatic cholera (12 hours.)"

Shadwell and Wapping.

M. 5, "Asiatic cholera (3 days.)"

Mile End, Old Town (Lower.)

In Mile End Workhouse, coal whipper, 35, "cholera (5 days.)"

Mr. Castleden states that "the deceased was very intemperate, and was brought into the workhouse in almost the last stage of the disease."

POPLAR; Poplar.

F. 1, "English cholera."

Bow.

M. 14, "cholera; fever (14 days.)"

"The parents of the boy reside in a very dirty neighbourhood adjoining a felt factory at Old Ford, Bow."—Mr. Dunstan's Note.

ERRATUM in the cholera list of last week.—In St. Olave, for son of a musician, read daughter of a musician.

ST. OLAVE; St. John.

M. 24, "Asiatic cholera (72 hours.)"

GREENWICH; East.

F. 45, "spasmodic cholera (3 days.)"

Mr. Waller states that "this case occurred in one of the tenements at the back of Spring-gardens, which he considers a very unwholesome neighbourhood, being low, damp, and without drainage. Opposite the house (which consists of two rooms, one over the other, without back ventilation) there is a privy for general use. The deceased had been reduced to great debility by attendance on her son, a lad of 21 years, who died on the 11th of typhus fever after an illness of seven weeks. The whole family were in very poor circumstances."

West.

In Dreadnought Hospital, M. 18, "cholera," (p.m.)

WANDSWORTH, &c.; Wandsworth.

M. 6, "cholera (3 days), convulsions (7 hours.)"

Clapham.

M. 3 months, "diarrhoea (44 hours), cholera (24 hours.)"

Battersca.

At the Union Workhouse, labourer 33, "Asiatic cholera (12 hours.)"

At Stewart's-buildings, daughter of a milkman 4, "cholera (12 hours.)"

Mr. Hems, the Registrar of Whitechapel Church sub-district, states, that "a case of cholera has occurred in his district during the week. On the 10th an inquest was held; particulars have not yet been received."

Mr. Verrall, the Registrar of St. John's, in St. George in the East, states, that "since he made the last entry in this week's report he has received information from the Coroner of an inquest, held on a young man aged 19 years, a labourer, who died on the 13th instant from cholera (24 hours), p.m., at St. George's Workhouse."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 49.

(The tabular abstract on the first page is for the week ending Saturday, Dec. 16th. The following selection of cases is made from the Returns for the week ending Dec. 9th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Burns and Scalds (continued):—	duration
Baker, 65 (no inq.), apoplexy; fracture of the skull from a fall while in the fit.....	11 days	In St. Bartholomew's Hospital, timber-bender 43, (post. mort.), shooting himself in the head with a pistol loaded with a bullet, at Compton-street, Clerkenwell.....	7 days	F. 32, burnt from not being able to escape from a house on fire—how the fire was caused not known.....	*
Labourer 19, accidentally killed by the falling of a railway arch.....	*	<i>Drowning:—</i>		In St. Bartholomew's Hospital, daughter of a dyer 10, burnt by her clothes taking fire (at Hackney-road).....	11 days
Labourer, 23, accidentally killed by the falling of a railway arch.....	*	Merchant's clerk, 21, accidentally drowned by falling into the London Dock Lock.		In St. Bartholomew's Hospital, spinster 54, burnt by her clothes taking fire whilst reaching to a mantel-piece (at Peter-street, Saffron-hill).....	*
Daughter of a carpenter, 9 months, effusion on the brain from a fall on the head, in consequence of the nurse sitting on a chair without a back.....	*	M. 17, found dead in the waters of the South Dock, Poplar—apparently drowned (without marks).		F. 60 (no inq.), paralysis.....	3 years & 9 mon.
In St. Bartholomew's Hospital, carman 57, erysipelas from a wound on his right leg by a cask, which he was unloading from a van at Primrose-street, Bishopsgate.....	6 weeks	Apprentice waterman 21, drowned by accidentally falling into the Thames.		Burn from accident.....	14 days
In St. Bartholomew's Hospital, wife of a brush-maker, 71 (p.m.), effects of a wound on her right leg, from being run over by a carriage in London Wall.....	3 days	<i>Hanging and Suffocation:—</i>		F. 2, accidental death from scalds by the fall of a pot of coffee.....	*
F. 74 (no inq.), old age—fractured fibula.....	*	Son of a shoemaker, 8 months, accidental asphyxia by the passing of a potato into the trachea.....	instant	<i>Poison:—</i>	
M. 87 (no inq.), broken thigh.....	*	<i>Burns and Scalds:—</i>		M. 16, exhaustion from sickness, induced by taking sugar of lead, when labouring under natural disease of body—no proof as to state of mind.....	*
F. 32 (no inq.), concussion of the brain.....	*	In Westminster Hospital, son of a mason 5, burn of the body and limbs by clothes taking fire at the grate.....	16 hours	<i>Other Violence:—</i>	
<i>Wounds:—</i>		In Westminster Hospital, son of a labourer 4, burn of the body and limbs, by clothes taking fire at the grate, supposed to have occurred whilst drying his pinafore.....	14 hours	F. 62, (no inquest), mortification.....	10 days
In University College Hospital, M. 42 (p.m., no inq.), gangrenous erysipelas of hand and arm from a scratch on the finger.....	6 days			Injury to the hand.....	*

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	Small Pox (continued):—	duration	Syphilis:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		ST. GILES IN THE FIELDS; North.		F. 9 weeks, marasmus—syphilitic eruptions, 7 weeks	
CHELSEA; South.		M. 1, small pox (not vaccinated).....	7 days	<i>Malformation:—</i>	
F. 7, variola.....	6 days	CLERKENWELL; Pentonville.		F. 7 days, spina bifida.	
purpura.....	4 days	M. 11 months, small pox.....	10 days	M. 3 months, cyanosis.....	from birth
F. 11, small pox (not vaccinated).....	8 days	WHITECHAPEL; Mile End New Town.		M. 3, deformity of chest and spine.	
F. under 1, natural small pox.....	from birth	F. 3, small pox (not vaccinated).....	8 days	bronchitis.....	3 days
ST. GEORGE; Hanover-square; Belgrave.		North.		<i>Hernia:—</i>	
F. 10 months, variola confluent (not vaccin.).....	12 days	F. 25, small pox (1st attack).....	6 days	In University College Hospital, F. 68 (p.m.), strangulated femoral hernia.....	3 days
F. 26, small pox (after vaccination).....	17 days	vaccinated in the country when 4 years of age—with what effect not known.		peritonitis.....	46 hours
pneumonia.....	2 days	STEPNEY; Mile End, Old Town (Upper).		F. 52, strangulated intestine.....	*
WESTMINSTER; St. John the Evangelist.		M. 2, variola confluent.....	10 days	In London Hospital, F. 50, strangulated hernia (operation).....	2 weeks
M. 4 months, variola (not vaccinated).....	9 days	pneumonia.....	2 days	In Guy's Hospital, F. 34 (post mort.), anasarca	*
F. 1, variola (not vaccinated).....	7 days	ST. SAVIOUR; Christchurch.		ruptured intestine.....	2 days
ST. MARGARET.		M. 1, small pox (not vaccinated).....	10 days	peritonitis.....	*
M. 2, variola confluent (not vaccinated).....	*	ST. GEORGE, SOUTHWARK; London-road.		<i>Diabetes:—</i>	
M. 1, variola confluent (not vaccinated).....	*	M. 5 months, variola.....	7 days	M. 47, diabetes.....	3 years
M. 5, variola confluent, natural (not vaccin.)..	*	vaccinated about a month ago, when small pox was in the house.		M. 53, diabetes.....	*
MARYLEBONE; The Rectory.		LAMBETH; Waterloo (1st part.)		M. 26, diabetes.....	15 months
M. 4, small pox (not vaccinated).....	3 weeks	M. 4, confluent variola.....	1 month	phthisis.....	6 months
F. 2, variola (not vaccinated).....	5 days	typhus gravior.....	11 days	<i>Stone:—</i>	
PANCRAS; Camden Town.		(not vaccinated.)		No deaths placed in the abstract of the week to this head.	
In Small Pox Hospital, M. 18, small pox confluent.....	17 days	M. 14 days, in the same family as last, variola, 5 days pneumonia.....	36 hours	<i>Childbirth:—</i>	
pneumonia.....	*	ROTHERHITHE; Rotherhithe.		F. 27, puerperal peritonitis.....	*
vaccinated young at Hagburn, Berks; two or three very small cicatrices.		M. 7, small pox.....	14 days	F. 33, puerperal fever.....	4 days
In Small Pox Hospital, F. 26, small pox confluent, petechial.....	3 days	not vaccinated.		F. 19, puerperal fever.....	2 days
believes she was vaccinated when young at Earl Chilton, near Leicester—no cicatrix.		GREENWICH; St. Paul's, Deptford.		F. 20 (post mort.), puerperal fever.....	14 days
HACKNEY; Stamford Hill.		M. 11 months, small pox.....	14 days	diarrhoea.....	2 days
F. 15, variola (not vaccinated).....	14 days	(1st attack—not vaccinated.)		tubercular disease of lungs.....	*

DEATHS BY CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, &c. (continued):—

Childbirth (continued):—	duration
F. 43, childbirth.....	26 days
puerperal peritonitis	21 days
pleurisy	3 days
F. 29, labour, which lasted 8 hours.	
puerperal peritonitis	3 days
F. 28, puerperal mania	5 days
F. 35, childbirth—exhaustion	4 days
F. 39, childbirth—puerperal convulsions—apoplexy	26 hours
F. 39, childbirth.....	11 days
F. 26, diarrhoea—low fever	7 days
after parturition with dead fœtus of 7 months.	
Fever and Miscarriage:—	
F. 28 (post mort.), fever, &c.....	1 week
miscarriage on the 30th November.	
Delirium Tremens:—	
M. 43, delirium tremens	5 days
Intemperance:—	
F. 42, diarrhoea from irregular course of life and drinking.....	2 months
Privation:—	
In St. Andrew, East, Holborn, F. 42, destitution * typhus	10 days
See also the list of Cholera Cases in the publication of last week.	

Want of Breast-milk:—	duration
F. 3 weeks, defective nutrition	*
M. 23 days, atrophy from want of breast-milk	*
F. 12 days, atrophy from dry-nursing.....	*
Purpura and Scurvy:—	
In Dreadnought Hospital, M. 27 (p.m.), scurvy and dysentery—extensive ulceration of large intestines	*
M. 42, severe cold—paralysis of the trigeminal nerve	7 weeks
purpura hæmorrhagica	5 weeks
Hæmorrhage, Hæmatemesis, &c.:—	
M. 49, disease of stomach.....	1 year
hæmatemesis	*
Miscellaneous Cases:—	
In University College Hospital, F. 27, morbus cordis—anasarca—ascites	*
paracæsthesia	16 hours
F. 4 months, a twin, debility from birth (no medical attendant.)	
The mother has had three confinements, each with twins, of whom only one survives.	
M. 49, fever from miasma.....	9 days

	duration
M. 3, convulsions	*
This child is reported by the parent to have been seized with malignant scarlatina on the 1st December, and to have died on the 4th. Other two children of the family are taken ill with the same complaint, and not expected to live. Mr. Yardley, the Registrar, adds, that "the house (No. 1, Thomas-street, St. George, Bloomsbury) has a large cesspool under it, containing the soil from three houses, and emitting a dreadful stench in wet weather; added to which, there is generally a load of ashes and vegetable refuse lying at the basement immediately under the dwelling."	
M. 73, retention of urine from old stricture ..	*
puncture of the bladder above the pubes	10 weeks after operation
F. 46, cancer mamma removed by operation in March, 1847—recovery incomplete—carcinoma of right lung	recognized 4 months enuciation.
In Guy's Hospital, M. 38 (p.m.), amputation, 6 days pneumonia	*
M. 79, loss of his wife—and unfortunate speculations, by which he lost his whole property—falling in health for about 1½ year ..	*
F. 28, profuse hæmorrhage from a varicose vein of the leg, connected with disease of heart ..	*

Mr. Bedwell, Registrar of Borough-road sub-district, states that "three deaths have recently occurred from scarlatina in one family, and that the disease has prevailed extensively for more than two months in his district. Filthy sewers run at the back of the houses in Wellington-street; and in the yards, which are very small many of the inhabitants keep pigs.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD—Apoplexy, 1; aneurism, 1; disease of heart, 3; cholera, 1; destitution and cholera, 2; violence, 18; other specified causes, 1; "found dead," "natural death," "visitation of God," &c., 6.—TOTAL, 33 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 40.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 16th December, 1848.

Day. 1848		Phases of the Moon	Mean readings of the Barometer, from 6 Observations, (corrected and reduced to 32 degrees Fahrenheit.) +	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 7 years	Wind as deduced from Osler's Anæmometer. DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn till about noon when it became positive with strong tension, and continued so until midnight.	The sky was partially covered with light clouds and haze until near midnight, when it became cloudless.
MON.	Nothing was shewn during the remainder of the week, except on the 14th day at about 3h. p.m., when slight negative electricity was shewn.	Light cirrostrati prevailed until about 9h. a.m., when the sky became cloudless, and remained so until about 3h. p.m.; after which time, until midnight, it was principally covered with cirrostratus and scud; a corona was visible at midnight.
TUES.		The sky was overcast with cirrostratus and scud until about 4h. p.m., when the clouds began to clear away, and it became cloudless at about 6h. p.m.; after which time, till midnight, a few light clouds prevailed.
WED.		The sky was partially covered with light cloud throughout the day.
THURS.		The sky was nearly free from cloud till about noon, when it became overcast with cirrostratus and scud, and continued so during the remainder of the day; rain fell at intervals between 3h. p.m. and midnight.
FRI.		The sky was overcast throughout the day, except at about 6h. p.m., when the clouds were broken for a short period; there were several squalls of wind and rain during the day.
SAT.		The sky was overcast with cirrostratus and scud, and rain fell continuously throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average. The ocean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 6h. a.m. was 48.6; and the mean reading at 6h. p.m. was 5.4; the mean readings at the Royal Observatory for the same times were 48.3 and 49.8 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, December 23d, 1848.

ANNUAL SERIES IX.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

The table is read thus:—Five men at the age of 25 years, and less than 35, died after illness of 18 hours and less than 24 hours.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, 23rd Dec.

Seven were cases in which Inquests were held; the remainder are all certified by Medical Attendants.

CHELSEA; South.

M. 6, "malignant cholera (26 hours.)"
F. 26, "malignant cholera (10 hours.)"

North West.

M. 20, "malignant cholera (26 hours.)"—Inquest.

WESTMINSTER, St. John the Evangelist.

At 2, Grosvenor-street, Millbank, a private watchman, 37, "neglected diarrhoea (14 days), cholera (34 hours.)"

At 3, Pump Court, Perkins-rents, Great Peter-street, a labourer, 60, "cholera Asiatica (12 hours.)"

Mr. Pearce, the Registrar, states, with reference to the former case, that "the disease was no doubt induced by the nature of the employment of deceased, which frequently deprived him of necessary rest for several days together, and by his very intemperate habits. He was subject to repeated attacks of diarrhoea, which like the present were usually neglected. With respect to the second case, the deceased was not visited by a medical man until two hours before death. His occupation was that of pulling down old houses. Previously

to the attack his health had been good, and his habits perfectly sober; but his living had been very low, from poverty, for many weeks, and his house was situated in a locality which has been repeatedly reported as without drainage, sufficient supply of water, cleanliness, and pure air. A bone-boiler and tallow-melters establishment is in the immediate vicinity, and the owner of the premises now lies dead from colica biliosa."

St. Margaret.

M. 44, prisoner in Westminster House of Correction, of no profession. "Asiatic cholera—found in his cell apparently labouring under diarrhoea, died in about 6 hours."—Inquest.

PANCRAS; Camden Town.

Wife of a porter, 29, "cholera (3 days.)"

Mr. Hott states, that "the circumstances of deceased were moderately good; she was attacked on Sunday, the 17th, prematurely confined next day, and died on the 19th. She had suffered from diarrhoea about a week before, which was attributed to eating sprats for supper."

CLERKENWELL; Pentonville.

M. 41, "Asiatic cholera (14½ hours.)"

Mr. Pyne, the Registrar, states, that "the deceased had been drinking a large quantity of common intermediate beer, and living in a small and badly ventilated room with a large family of children, where very bad smells often rise from a drain supposed to run under the room. The sewerage of Pentonville, especially Chapel-street and Warreu-street, is very bad. Mr. Butler, the medical attendant of the above case, has informed me, that he has attended a very great number of cases of typhus and other fevers, many of which he attributes to the bad drainage of the houses."

BETHNAL GREEN; Town.

At 26, Artillery-street, Waterloo-town, F., dress-maker 25, "English cholera, (3 days.)"

WHITECHAPEL; Church.

In London Hospital, M. 19, "Asiatic cholera (24 hours); hæmorrhage, (2 days.)" Goodman's Fields.

At 5, Swallow's-garden's, Rosemary-lane, M. 14, "cholera Asiatica, (2½ days.)" Aldgate.

At 8, Slater's-court, Blue Anchor-yard, F. 12, "Asiatic cholera."

At 5, Slater's-court, in the same yard, F. 5, "Asiatic cholera, (6 days.)"

At 10, Slater's-court, in the same yard, F. 5, "cholera."

At 8, Glasshouse-street, Rosemary-lane, F. 64, "Asiatic cholera, (24 hours.)"

Mr. Harris, the Registrar, states, that "the court is very unhealthy, and one of the worst in his large district, the inhabitants being of the lowest order of Irish, and very filthy. Several cases which occurred in the same neighbourhood have been taken to the Workhouse and Loudon Hospital not in this district."

STEPNEY; Limehouse.

F. 28, "cholera, (2 days); consecutive fever, (6 days.)"

Shadwell and Wapping.

M. 4, "cholera, (4 days.)"

POPLAR; Poplar.

M. 45, "diarrhoea (3 days); cholera, (3 days.)"

POPLAR; Bow and Bromley.

At Old Ford, Bow, M. 22, "natural death from cholera, (2 days.)"—Inquest.

At Grove Hall Asylum, F. 30, "natural death, sudden, after attack of cholera."—Inquest.

At 6, Frederick-street, Bromley, F. 3, "natural death, sudden, from cholera, (9½ hours.)"—Inquest.

At the same house, F. 31, "sudden death from cholera (12 hours.)"—Inquest.

Mr. Dunstan, the Registrar, states, that "both cases occurred in a house situated in a street of the most filthy description. The house contains 4 small rooms, each inhabited by a different family, the occupants amounting in all to 24 persons, chiefly Irish. Most of the cholera cases of this parish have occurred in this street."

F. 29, natural death, sudden, from spasmodic cholera (14 hours.)—Inquest.

"This occurred in Dyer's-lane, Bromley, another filthy place, having a collection of small houses, and no thoroughfare."

ST. SAVIOUR; St. Saviour.

F. 41, cholera, (48 hours.)"

Christchurch.

At 9, Holland-street, plasterer, 58, "malignant cholera."

ST. GEORGE, SOUTHWARK; Borough-road.

M. 3, "diarrhoea (3 days); Asiatic cholera, (9 hours)"

M. 5, "Asiatic cholera, (30 hours.)"

LAMBETH; Church, 1st Part.

M. 42, "cholera Asiatica, (30 hours.)"

WANDSWORTH, &c.; Wandsworth.

M. 2, "Asiatic cholera, (8 hours.)"

Battersea.

At the Union Workhouse, gardener, 50, "Asiatic cholera (48 hours.)"

In the same Workhouse, widow, 44, "malignant cholera (3 days.)"

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 50.

(The tabular abstract on the first page is for the week ending Saturday, Dec. 23d. The following selection of cases is made from the Returns for the week ending Dec. 16th.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds (continued):—	duration	Burns and Scalds:—	duration
M. 3, injuries to the head by an accidental fall from a window	*	M. 54, wound in the belly by firing into it 5 slugs from a blunderbuss (while insane during paralysis of the side)	1 day	F. 4, burns from her clothes taking fire at a grate in absence of the mother	*
M. 34, injuries to the head by a fall down a flight of stairs	*	Brazier 34, suicide by cutting his throat when of unsound mind	instant	F. 3, injuries from being accidentally burnt by the clothes taking fire at a grate—no guard	*
M. 16, injuries by a fall from a wall	*	<i>Drowning:—</i>		At 7, Flint-street, Walworth, daughter of a labourer, 4, extensive burns by her night dress igniting accidentally	1½ hour
M. 62, concussion of the brain by an accidental fall from a step ladder	*	M. apparently about 40, apparently drowned; no evidence how he came into the water—found dead, no marks of violence.		At 31, King-street, Surrey-grove, son of a coach painter 4, accidental—inflammation of the windpipe, by drinking hot water from the spout of a kettle	7 days
Fellowship porter, 55, accidental death by falling down a ship's hold,	16 days	M. (unknown) about 50, the body too much decomposed to allow of its being ascertained whether death had been caused by drowning.		Son of a professor of languages 1, scald of the chest by spilling hot water from a jug upon him in absence of the mother	*
At Nelson's Cottage, King-street, Surrey-grove, labourer 36, effusion of blood on the spinal cord, from an accidental blow on the back by a person's arm in a fall	40 hours	M. 34, drowned—not known how he came into the water—was occasionally insane.		<i>Poison:—</i>	
Son of a horsekeeper 1, injury of the head from being knocked down by a butcher's cart in the road	5 minutes	F. 26, suicide by drowning—not known whether insane.		M. formerly a student of medicine 21, prussic acid, not known whether taken suicidally, or as an overdose of medicine	*
Labourer 25, accidentally crushed by a railway-carriage, and killed	instant	Nurse in the Shoreditch Workhouse, 53, found dead in Regent's Canal, without marks of violence—apparently drowned.		Coachman, 40, suicide with oxalic acid in unsound mind	*
<i>Wounds:—</i>		Seaman 16, found dead in the East India Export Dock—apparently drowned—without marks.		F. 19, death from putrid cheese, how taken into the stomach not known	*
Merchant 29, exhaustion by loss of blood from a wound in his throat with a razor—suicide	*	<i>Hanging and Suffocation:—</i>			
M. 40 (p.m.), bronchitis, accelerated by a wound in the throat, inflicted by himself with a razor when insane from the effects of pain	died 2 hours after wound	M. 16, found dead and hanging by the neck—suicide—state of mind unknown.			
bronchitis	6 days				

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, PRIVATION, PURPURA, HÆMORRHIAGE, HÆMATEMESIS, ETC.

Small Pox:—	duration	BETHNAL GREEN; The Church.	duration	Chicken Pox:—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		M. 3, small pox	8 days	M. 1, varicella	3 weeks
<i>CHELSEA; North-east.</i>		vaccinated with effect a year previous.		dentition	*
M. 4, variola (not vaccinated)	8 days	<i>The Town.</i>		convulsions	2 days
<i>WESTMINSTER; St. John the Evangelist.</i>		M. 10 months, small pox (not vaccinated)	3 weeks	<i>Syphilis:—</i>	
M. 19 (inquest), natural, from confluent small pox (vaccination doubtful)	13 days	convulsions	*	M. 3 months, syphilitic psoriasis	3 weeks
M. 26, variola (not vaccinated)	11 days	<i>WHITECHAPEL; Mile End New Town.</i>		M. under 1, syphilis	congenital
M. 6 months, variola confluent (not vaccin.)	12 days	M. 7, serofulous ulcers	6 weeks	convulsions	*
acute bronchitis	7 days	small pox (not vaccinated)	5 days	In Dreadnought Hospital, M. 26 (post mort.), syphilis—erysipelas—gangrene	*
F. 1, variola confluent (not vaccinated)	21 days	<i>Church.</i>		In Dreadnought Hospital, M. 28, syphilis—erysipelas	*
suppuration of globe of the eyes	2 days	M. 3 weeks, small pox (not vaccinated)	*	<i>Malformation:—</i>	
<i>St. Margaret.</i>		F. 3, small pox, (vaccinated when 3 months old)	*	F. 16 days, malformation of heart.	
M. 7, small pox	11 days	<i>POPLAR; Poplar.</i>		M. 2 days, malformation.	
head symptoms	2 days	M. 2 months, small pox—convulsions (not vaccinated)	4 days	F. 2, deformed chest—phthisis	*
<i>MARYLEBONE; The Rectory.</i>		<i>ST. OLAVE; St. John.</i>		M. 1 month (post mort.), inauition from deficient power of swallowing—abnormal formation of maxillæ.	
F. 4, variola	3 weeks	F. 19, variola	5 days	M. 5 days, malformation of the organs of deglutition—inanition.	
successfully vaccinated 4 years before.		<i>BERMONDSEY; St. James.</i>		M. 58, malformation of brain.	
<i>Christchurch.</i>		F. 36 days, small pox, natural	21 days	catarrh	5 days
M. 2, suppressed small pox (not vaccinated)	3 days	<i>ST. GEORGE, SOUTHWARK; Kent-road.</i>		<i>Bronchitis and Deformity:—</i>	
<i>Camden Town.</i>		M. 7 months, variola (vaccinated without effect)	5 days	In the Strand Workhouse, F. 50, bronchitis many years, great deformity of chest.	
M. 30, small pox (vaccinated)	9 days	<i>Borough-road.</i>		<i>Hernia:—</i>	
In Small Pox Hospital, M. 20, small pox, confluent (unprotected)	8 days	F. 3, variola	12 days	F. 67 (post mort.), strangulated femoral hernia, 24 hours operation—peritonitis	64 hours
In Small Pox Hospital, M. 23, small pox confluent unmodified	12 days	purpura	3 hours	M. 59, paralysis from hernia	3 years
gangrene of penis.		(vaccinated with effect in infancy.)		F. 76, umbilical hernia	30 years
said to have been vaccinated when a child at North Warmborough, Odiham—no cicatrix.		<i>LAMBETH; Church (1st part).</i>		<i>Diabetes:—</i>	
<i>BETHNAL GREEN; The Green.</i>		F. 2, variola (not vaccinated)	2 weeks	F. 51, diabetes	*
M. 1, small pox, after vaccination	*			<i>Stone:—</i>	
				In Guy's Hospital, M. 73, stone in the bladder	*

Childbirth:—	duration	Disease and Childbirth:—	duration	Want of Breast-milk; Inanition, &c.:—	duration
The time elapsing from commencement of labour to death should invariably be returned.		F. 38, phthisis, 6 days after confinement.		M. 3 months, marasmus per defectum lactis, 2 months	
F. 45, childbirth.....	11 days	In King's College Hospital, F. 38 (post mort.), tumour of upper jaw.....	5 years	F. 1, debility from birth.....	
F. 38, puerperal fever.....	9 days	childbirth.....	12 days	F. 3 days, inanition.....	
F. 28 (inquest), natural by the visitation of God, from peritoneal inflammation after birth of twins.....	13 days after confinement	F. 27, disease of heart and dropsy parturition syncope.....	3 months	F. 3 days, inanition.....	
F. 35, puerperal fever.....	2 days		1 hour	F. 11 days, inanition.....	
F. 21, puerperal peritonitis.....	14 days	Delirium Tremens:—		Purpura:—	
F. 30, childbirth.....	13 days	M. 41, delirium tremens.....	about 6 months	No deaths in the abstract of the week under this head.	
F. 30, peritonitis.....	9 days	M. 64, delirium tremens.....	3 days	Hæmorrhage, Hæmatemesis, &c.:—	
F. 30, pneumonia.....	4 days	Rheumatic Fever; Delirium Tremens:—		F. 35 (inquest), rupture of a blood-vessel near the heart.....	
F. 21, childbirth.....	*	M. 37, rheumatic fever.....	12 days	In St. Thomas' Hospital, F. 24, hæmatemesis	
F. 35, puerperal fever.....	3 days	delirium tremens.....	4 days	F. 39 (inquest), natural death—hæmorrhage from the stomach.....	
F. 35, epilepsy.....	5 days	Intemperance:—		Miscellaneous Cases:—

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension strong between noon and 1h. p.m. Nothing was shewn at any other examination.	The sky was generally cloudless till 5h. p.m., and overcast with cirrostratus afterwards. Thin rain was falling occasionally between 6h. p.m., and midnight.
MON.	Positive and tension strong at 9h. a.m. Nothing was shewn at any other time.	The sky was overcast till 8h. a.m., one-third portion was covered till 6h. p.m., and overcast afterwards; cirrostratus, fleecy clouds and scud. Thin rain was falling at 9h. p.m.
TUES.	Positive, and tension strong between noon and 6h. p.m. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and scud.
WED.	Nothing was shewn throughout the day.	The sky was overcast till 9h. p.m., and cloudless from this time till midnight; cirrostratus and scud, and the temperature of the air declined to 27.8 at midnight.
THURS.	Positive, and tension weak between noon and 6h. p.m. Nothing was shewn at any other time.	The sky was cloudless throughout the day. The temperature of the air early in the morning was 25°, and it continued low throughout the day.
FRID.	Nothing was shewn throughout the day.	The sky was cloudless till 10h. 45m. p.m.; from this time till midnight clouds were prevalent but variable in amount.
SAT.	Weak positive electricity was exhibited at different times during the day.	The sky was overcast at 6h. a.m., three-fourths covered at 9h. a.m., generally overcast from this time until 6h. p.m., and clear till shortly before midnight, when it became again overcast; cirrostratus and scud. The day was exceedingly cold; at 10h. p.m. the reading of the thermometer was 22.5.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of cloudy is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1846.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

In reading the 16th column, it will be borne in mind that + is read, "higher;" and — "lower," than the average.

The mean reading of a thermometer placed on the malmes of the Dreadnought Hospital Ship, and read each day at 6h. a.m. was 35.5; and the mean reading at 6h. p.m. was 37.7; the mean readings at the Royal Observatory for the same times were 35.2 and 35.6 respectively.

Births and Deaths registered in London,
During the Week ending Saturday, December 30th, 1848.

Weekly Average derived from Deaths of 1843-4-5-6-7, and corrected for increase of Population																						
Males				581	Deaths registered in the Week				Males				709	Births registered in the Week				Males				733
Females				573					Females				694					Females				725
Total				1154					Total				1403					Total				1458

* The age of a person whose death is ascribed to disease of brain, is not stated.

Note.—The present return exhibits a great increase of deaths registered, above the weekly average. But, it must be observed, that the excess is only to a slight extent produced by increased mortality: it is chiefly due to an accumulation of Coroner's cases, many of which occurred in former weeks, but were not registered till the end of the quarter. Scarlatina, the mortality from which is double the average, and typhus continue to be the only epidemics which prevail to an excessive degree. In the above table, Coroner's cases fall principally under violent and sudden deaths.

M. 73, bronchial influenza	*	St. GEORGE, SOUTHWARK; Kent-road.			
		F. 54, influenza-bronchitis	*		

NOTE.—In making the abstract of causes of death, the classification of cases in which both primary and secondary diseases are returned, is governed by the primary. But this rule has not been observed so far as relates to cases of influenza, returned in the week ending December 18th; for all returns in which it is named, though in complication with other forms of disease, have almost without exception been classed under this epidemic.

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Violence, 50; disease of the heart, 11; apoplexy, 3; intemperance, 2; privation, 2; other specified causes, 21; "found dead," "natural death," "visitation of God," &c., 30.—TOTAL, 119 cases.

THE NUMBER OF CASES in which it is reported that a POST MORTEM EXAMINATION was made, is 38.

ST. GEORGE-IN-THE-EAST; St. John.

At St. George's Workhouse, son of a labourer 2, "Asiatic cholera."

STEPNEY; Ratcliffe.

On board ship, M. 23, "natural death; sudden from English cholera, (12 hours)."—Inquest.

On board ship, M. 58, "sudden death from Asiatic cholera."—Inquest.

On board ship, M. 52, "natural death from Asiatic cholera."—Inquest.

Mr. Wells, the Registrar, states, that "the above 3 cases occurred between the 5th and 15th October, but were not registered at that time, as the Coroner's signature had not been received.

— Mile End, Old Town (Upper.)

M. 56, "natural death; sudden from Asiatic cholera."—Inquest.

POPLAR; Bow and Bromley.

At 9, Mary-street, Bromley, wife of a painter, 26, "cholera, (23 hours)."

Mr. Dunstau, the Registrar, states, that "the husband of deceased attributes her death to the want of proper nourishment, he being at the time out of employment."

ST. OLAVE; St. John.

M. 55, "diarrhoea (4 days), cholera (3½ days)."

ST. GEORGE, SOUTHWARK; Kent Road.

At 3, Redcross-court, wife of a labourer, 38, "Asiatic cholera (26 hours)."

At 119, Kent-street, wife of a tailor, 47, "English cholera (4 days)."

— Borough Road.

M. 58, "spasmodic cholera (32 hours). (Post mort.)—Inquest.

F. 4, "cholera (22 hours)."

NEWINGTON; St. Mary.

F. 29, "cholera (14 hours)."

Mr. Young, the Registrar, states, that "the place where the above death occurred is very close and ill drained, and a common privy adjoins the small and badly ventilated tenement. Deceased, who was wife of a master sweep and nightman, was not of very temperate habits. According to Mr. Nolan, the medical attendant, she suffered much from spasms, but owing to the uncleanly condition in which she was found, and allowed to remain, it was impossible to say whether the usual livid appearance of the skin formed in her case one of the symptoms, which in other respects were of a malignant character."

LAMBETH; Church (2nd part.)

M. 22, inmate of Lambeth Workhouse, "natural death from cholera."—Inquest.

Mr. Wheatley, the Registrar, states, that "this man was seized in a court leading out of Glasshouse-street, Vauxhall, and was only admitted to the house a few hours before death, which occurred on the 30th Nov. after severe suffering."

ROTHERHITHE; Rotterhithe.

M. 64, "spasmodic cholera (36 hours)."

WANDSWORTH AND CLAPHAM; Wandsworth.

M. 4, "cholera (20 hours)."

F. 9 months, "cholera infantum (4 days)."

F. 42, "cholera (19 hours)."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 51.

(The tabular abstract on the first page is for the week ending Saturday, Dec. 30th. The following selection of cases is made from the Returns for the week ending Dec. 23rd.)

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry show the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions:—	duration	Wounds:—	duration	Burns and Scalds:—	duration
Blacksmith, 39, injuries to the left leg, from an accidental fall on the street.....	*	Tailor, 43, cut his throat with a razor when insane, instant		In St. George's Hospital, son of a tailor, 5, (post mort.) burn of the body and limbs from his clothes taking fire at a grate, supposed when moving a saucepan.....	3 hours

DEATHS BY CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, &c. (continued).—

Childbirth:—

duration

The time elapsing from commencement of labour to death should invariably be returned.

F. 33, puerperal fever	5 days
F. 35 (post mort.), puerperal fever	18 days
caused by absorption from uterus, and circulation of putrescent fluids through the system, with effusion into knee-joint. &c.	
F. 30, peritonitis with effusion.	*
childbirth	4 days
F. 40, childbirth	8 days
phlebitis	4 days
F. 27, puerperal peritonitis	3 days
delivery	6 days
F. 38, childbirth—flooding.	14 hours after delivery
F. 37, hæmorrhage during parturition	9 hours
F. 35 (inquest), exhaustion caused by loss of blood from the uterus	*
A medical certificate adds, that "she died from exhaustion after miscarriage; had been ill a fortnight, but had not applied for advice till the day before death."	
F. 41, exhaustion	2 hours after childbirth
F. 35 (inquest), natural; in parturition with symptoms of rupture of uterus in protracted labour	*
F. 46, pneumonia	8 days
childbirth	12 hours
F. 25, epilepsy consequent upon childbirth	36 hours

Disease of Lungs and Childbirth:—

F. 39, disease of lungs	1 year
childbirth	3 weeks

See also cases of Small Pox.

Delirium Tremens:—

duration

M. 54, delirium tremens from debility	26 hours
F. 52, chronic inflammation of brain	6 months
delirium tremens	12 days

Diseased Liver and Delirium Tremens:—

F. 37, diseased liver—delirium tremens.	*
---	---

Intemperance:—

M. 78, bronchitis	6 days
accelerated by intemperance.	
M. 36 (inquest, post mort.), natural death—apoplexy	*
induced by eating immoderately.	

Privation:—

In Mile End Old Town, Lower, engineer 73 (inquest), sudden death from old age, accelerated by want	*
--	---

Want of Breast-milk; Inanition:—

M. 12 days, tabes—want of breast-milk.	*
F. 15 weeks, want of breast-milk—no medical attendant	*
M. 7 weeks, marasmus from want of breast-milk	*
M. 48 days, debility from birth.	*
deficiency of natural aliment	*

Purpura:—

No deaths under this head in the abstract of the week.

Hæmorrhage, Hæmatemesis:—

F. 56, hæmorrhage from the alimentary canal, 4 days	
M. 67, hæmaturia at intervals	11 years
colica biliosa.	2 days

Hæmorrhage, Hæmatemesis, &c. (continued).—

duration

M. 32 (inquest), exhaustion caused by sudden loss of blood from the lungs	*
M. 69, natural decay—melæna.	*
Beer-shop-keeper, 36 (inquest), natural death—sudden, from rupture of a vessel on the lungs	*

Gastritis, &c.:—

M. 76, gastritis	11 days
hepatitis	7 days
vomiting of black liquid secretions.	

Miscellaneous Cases:—

In University College Hospital, M. 51 (p.m.), interstitial absorption of head and neck of femur	*
pyæmia	3 days
In University College Hospital, M. 47 (p.m.), disease of knee	*
amputation	8 days
pneumonia	5 days
In University College Hospital, M. 68 (p.m.), hydrocele of cord—tapped—erysipelas of scrotum	11 days
M. 33 (inquest), disease of brain—under the treatment of a practitioner not legally qualified to practice medicine	symptoms during a fortnight
M. 1, mortification of the neck after a blister,	27 days
Mr. Burnett, the Registrar of Plumstead and Charlton, states, that scarlet fever of a malignant typhoid character has prevailed in his district for more than two months, chiefly in the low marshy ground adjoining Woolwich.	

ANALYSIS OF CASES IN WHICH INQUESTS WERE HELD.—Apoplexy, 6; hæmorrhage, 2; angina pectoris, 2; disease of heart, 4; childbirth, 2; cholera, 7; gluttony, 1; violence, 33; other specified causes, 11; "found dead," "visitation of God," &c., 13.—TOTAL, 81 cases.

THE NUMBER OF CASES in which it is recorded that a POST MORTEM EXAMINATION was made, is 59.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH, During the Week ending Saturday, 30th December, 1848.

Day.	Phases of the Moon	Mean readings of the Barometer, (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the mean Dew Point Temperature and Air Temperature				Wind as deduced from Osler's Anemometer.				Amount of Horizontal Movement of the Air in each day	Mean Amount of Cloud, 0—10	Rain In inches, read at midnight				
			Dry			Dew Point Highest in the sun, as shown by a self-register- ing Thermometer read at midnight Lowest on the grass, as shown by anemometer read at midnight	In the Water of the Thames at Greenwich, by self- registering Thermometers, read at 9 o'clock next morning		Mean from 6 Diff.	Greatest	Least	Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 7 years.	General Direction		Pressure in lbs. on the square foot												
			High- est	Low- est	Mean from 6 Obs. Corr.		Mean from 6 Rits Corr.	Highest					Lowest	A.M.	P.M.	Greatest	Least	Mean of 24 Obs.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension variable, between 2h. and 5h. 20m., p.m. Nothing was shewn at any other examination.	Three-fourths of the sky were generally covered till 4h. p.m., and overcast afterwards; cirrostratus and scud.
MON.	Positive and tension moderate at noon. Nothing was shewn at any other examination.	The sky was overcast till 11h. a.m., mostly clear between 11h. a.m., and 1h. 30m. p.m., then overcast till 11h. p.m., and cloudless afterwards; principally cirrostratus.
TUES.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud.
WED.	Positive, and tension strong at 6h. p.m. Negative and active at midnight. Nothing was shewn at any other time.	The sky was generally one-half covered by clouds till noon, and overcast afterwards. Rain was falling heavily between the hours of 9 p.m. and midnight.
THURS.	Nothing was shewn at 6h. a.m. and at noon. Positive, and tension moderate at other times.	The sky was overcast till 9h. a.m., about one-half covered till 4h. p.m., and overcast afterwards; cirrostratus, fleecy clouds, and scud. Rain was falling till 6h. a.m.
FRI.	Positive and tension moderate throughout the day.	The sky was overcast throughout the day; cirrostratus and scud.
SAT.	Positive, and tension moderate at 5h. and 6h. p.m. Nothing was shewn at any other time.	The sky was overcast till 10h. a.m., one-half covered till near noon, again overcast till 9h. p.m., and clear afterwards; cirrostratus and scud. A thin rain was falling between 5h. and 7h. p.m.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of clouds is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at intervals of three hours from 6h. a.m. to 6h. p.m., and at midnight. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part 1, 1848.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

The average temperature of the air is that determined by Mr. Glaisher from the two-hourly observations taken at the Royal Observatory, Greenwich, in the 7 years ending 1847, December 31.—See *Phil. Trans.* Part 1, 1848.

* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 6h. a.m. was 41.7; and the mean reading at 6h. p.m. was 43.8; the mean readings at the Royal Observatory for the same times were 41.8 and 42.6 respectively.

The average direction of the Wind was S.S.E. at the former part of the week, and it was N. at the latter part.

Births and Deaths registered in London,

It will be observed that of the 540 deaths from cholera, 330 occurred on the south side of the Thames.

FATAL CASES OF CHOLERA Registered in the Week ending Saturday, January 6th, 1849.

One is a case where an Inquest was held: the remainder are all certified by Medical Attendants. Of the 61 deaths, 48 occurred in Mr. Drouet's Institution; the remaining 13 in other parts of the Metropolis.

CHELSEA; South.

F. 1, "cholera maligna (106 hours.)"

ST. PANCRAS; Grays Inn Lane.

M. 6, "Asiatic cholera (14 hours.)"

F. 9, "Asiatic cholera (10 hours.)"

Mr. J. Worrell, the Registrar states that, "the above two cases are those of pauper children in Holborn Union, brought from Drouet's school at Tooting."

BETHNAL GREEN; Hackney Road.

F. 47, "Asiatic cholera (53 hours.)"

Mr. Murray, the Registrar states that "the circumstances of the deceased were comfortable, and the neighbourhood not overcrowded. The house in which she lived was well drained. Her habits had been intemperate; and the disease seems to have been accelerated by eating sixpenny worth of dry fish immediately before the attack. It is the only case of cholera which has occurred hitherto in this locality."

WHITECHAPEL; Goodman's Fields.

At 88, Leman-street, F. 30, "cholera (3 days;) consecutive fever (10 days.)"

In same house, F. 26, "Asiatic cholera (15 hours.)"

In same house, F. 23, "Asiatic cholera (31 hours.)"

"The house where the above three cases occurred, has been fitted up by the Whitechapel Union Guardians, for cholera patients."

WANDSWORTH and CLAPHAM; Streatham and Tooting.

Mr. Drouet's Infant Poor Establishment, Surrey Hall, Tooting Graveney: The following list contains *all* the deaths in this house, registered in the week, inclusive of four deaths not certified as caused by cholera.

F. 9, "vomiting (18 hours); diarrhœa;

collapse."

M. 6, "vomiting (21 hours); diarrhœa;

collapse."

F. 4, "vomiting and diarrhœa (8 hours);

collapse."

M. 5, "vomiting (19 hours); diarrhœa;

collapse."

F. 7, "vomiting and diarrhœa (12 hrs.);

collapse."

F. 8, "vomiting (5 hours); diarrhœa;

collapse."

F. 10, "cholera (15 hours.)"

F. 10, "cholera (14 hours.)"

M. 10, "cholera (21 hours.)"

F. 5, "cholera (14 hours.)"

M. 5, "cholera (13 hours.)"

F. 6, "cholera (5½ hours.)"

F. 6, "cholera (12 hours.)"

F. 2, "cholera (21 hours.)"

F. 3, "cholera (38½ hours.)"

F. 8, "cholera (11½ hours.)"

F. 4, "gangrene, (1 week); exhaustion

(3 days)."

F. 8, "cholera (2 days)."

M. 11, "cholera (3 days); exhaustion."

F. 3, "fretting for loss of mother (14

days); debility."

M. 13, "cholera (13 hours.)"

M. 10, "cholera (11 hours.)"

M. 4, "cholera (3 days); exhaustion."

F. 7, "cholera, (24 hours.)"

ST. OLAVE; St. John's.

F. 59, "cholera Asiatica (20 hours;) exhaustion (10 hours.)"

ST. GEORGE, SOUTHWARK; London Road.

F. about 50, "malignant cholera (5 days.)"—Inquest.

NEWINGTON; Walworth.

F. 6, "cholera (2 days.)"

F. 18, "English cholera (3 days.)"

Mr. Turner, the Registrar states that, "this young person who had come from Ireland, and had been in London about a month, was one of the casual poor, and had slept two nights in the asylum for the houseless which adjoins the workhouse, at Walworth. On Tuesday evening she was found to be very ill, and was at once admitted into the house, where she had medical attendance. She died on the following morning."

GREENWICH; Greenwich West.

In Dreadnought Hospital, M. 28, "cholera, acute laryngitis—death on second day," (p.m.)

WANDSWORTH and CLAPHAM; Battersea.

At Union Workhouse, son of a single woman, 6, "cholera (24 hours.)"

M. 13, "pneumonia (3 days.)"

F. 9, "cholera, (3 days; exhaustion.)"

M. 13, "cholera (38½ hours.)"

M. 4, "cholera (28 hours.)"

F. 5, "cholera (10 hours.)"

M. 5, "cholera (5 hours.)"

M. 3, "general debility (14 days) con-

vulsions (24 hours.)"

F. 14, "cholera (6 hours.)"

F. 7, "cholera (38½ hours.)"

F. 6, "cholera (82 hours;) exhaustion."

F. 6, "cholera (3 days;) exhaustion."

M. 14, "cholera (3 days;) exhausti."

F. 9, "cholera (40 hours.)"

M. 8, "cholera (8½ hours.)"

M. 5, "cholera (15 hours.)"

F. 11, "cholera (20 hours.)"

M. 7, "cholera (12 hours.)"

F. 8, "cholera (21 hours.)"

M. 4, "cholera; exhaustion (5 days.)"

M. 9, "cholera (10½ hours.)"

M. 11, "cholera (12½ hours.)"

M. 11, "cholera (17 hours.)"

F. 4, "cholera (48 hours.)"

F. 7, "cholera (24 hours.)"

M. 13, "cholera (6½ hours.)"

F. 10, "cholera (23 hours.)"

M. 9, "pneumonia (3 days) cholera (24

hours.)"

F. 10, "cholera (3 days;) exhaustion."

EXTRACTS FROM THE METROPOLITAN RETURNS OF THE PREVIOUS WEEK, No. 52.

The tabular abstract on the first page is for the week ending Saturday, Jan. 6th, 1849. The following selection of cases is made from the Returns for the week ending Dec. 30th.

NOTE.—M. or F. at the beginning of an entry indicates sex; the numerals which follow, mark the age at death, in years, except when otherwise stated. The italics at the end of an entry shew the duration of illness; an asterisk (*) is inserted when the Coroner, Medical Officer of Hospital, or private Practitioner has failed to ascertain or state the time in which the disease or injury proved fatal. Whenever the time of illness cannot be discovered, the fact should be stated.

RETURNS OF VIOLENT DEATHS, MADE CHIEFLY BY CORONER.

NOTE.—The cases of violence not returned by the Coroner, have the words "no inquest."

Fractures and Contusions :—	duration	Fractures and Contusions (continued) :—	duration	Hanging and Suffocation :—	duration
49, (p. m.), apoplexy caused by falling down, whilst intoxicated, at Stationer's Hall	2 hours	In St. Thomas' Hospital, carman 53 (p. m.), erysipelas, brought on by a wound on his head, by falling from a cart, in King William-street	6 days	Umbrella-maker 39, suffocation by hanging—suicide.	
Butcher, 43, concussion of the brain caused by falling down stairs (at Hatfield-street, Blackfriars-road)	24 hours	In St. Thomas' Hospital, prizier in the leather business 84 (post mort.), fracture of collar bone and 4 ribs, two of which perforated his lung—from having been run over by a chain cart, on London-bridge	5 days	M. 30, suicide by hanging in temporary derangement.	
St. George's Hospital, carpenter 38 (p. m.), fracture of the base of the skull by falling from a ladder when at work, at Devonshire-House	5 days	In University College Hospital, labourer 28, fracture of the bones of both legs, caused by the wheels of a railway truck	*	Son of a shoe-maker 10, and son of a labourer 13, accidentally suffocated in a crowd of persons at the Victoria Theatre	instantly
9 (no inq.), spinal curvature after injury by a fall	3 years	In London Hospital, labourer 42, accidental by a blow from a plug from a cylinder under proof	*	F. servant 14, strangled and suffocated by her mother . manslaughter against Jane Pullen.	
psora abscess—general debility.		In London Hospital, labourer, 50, accidental by a blow from a jigger	9 days	Burns and Scalds :—	
Charing Cross Hospital, porter 33 (p. m.), fracture of cervical vertebra, by falling with a load on his back, in Ivy Bridge-lane, Strand, 62 hours		In Guy's Hospital, son of a saddler, nearly 17, compound fracture and severe laceration of his right leg, by the discharge of fire-works, at East-street, London-road, Southwark; and inflammation after amputation	1 month	Lamplighter, 34, hanged himself by a cord to a nail in the wall of his apartment (at St. Andrew's-hill)	7 hours
57 (post mort.), husband's occupation not known, fracture of the skull by a fall down stairs	about 12 hours	In St. Thomas' Hospital, spinster 24, fracture of leg, dislocation of shoulder, and wound of arm-pit, from having been drawn under the spindle of a corn threshing machine, near Blackheath	4 days	In St. George's Hospital, son of a bricklayer 4, burn of the body from clothes taking fire, (supposed to have been reaching to the mantel piece)	13 hours
University College Hospital, wife of a house painter, 41, injuries of the head, and fractures of the bones of the arms, caused by a fall from a luy-loft	*	Excavator 36, accidentally crushed by a fall of earth.		In University College Hospital, daughter of a labourer 13, accidental burn	*
University College Hospital, baker 30 injuries caused by an accidental fall on iron rails	*	In London Hospital, labourer 23, fractured ribs and stomach, how caused unknown	*	In University College Hospital, son of a ladies' shoe-maker 2, accidental burn	*
University College Hospital, son of a piano-forte-maker 13, wound in the neck, caused by a fall on some stairs	*	Son of a labourer 11, accidentally run over by a railway waggon	5 hours	F. 3, accidental burn, caused by falling against a stove containing fire	*
University College Hospital, M. 60, injury of the spine, caused by a fall from a ladder into an area	*	In University College Hospital, wife of a pensioner 55, accidental fracture of the bones of the left leg	*	In King's College Hospital, son of a pork-butcher 4, burn of the body and limbs from clothes taking fire	about 3 hours
King's College Hospital, working shoe-maker 25 (post mort.), fracture of the base of the skull; jumped out of a second floor window of 112, Gray's Inn-lane, the house being on fire (how the fire originated no evidence)	about 30 minutes	Wounds :—		In King's College Hospital, daughter of a tobacco-pipe-maker, 3, burn of the body; clothes took fire when playing with a piece of lighted paper	6 days
4, accidental death by a fall and concussion of the brain	*	In London Hospital, porter 37, accidental puncture of thumb from a glass bottle	8 days	In London Hospital, daughter of a weaver 7, accidental from burns by his clothes taking fire	31 days
London Hospital, wife of a labourer 40, accidental injury of the knee—and erysipelas caused by a fall	3 months	Drowning :—		In London Hospital, daughter of a labourer 2, accidental from burns, by her clothes catching fire	1 day
Guy's Hospital, wife of a seaman 65, inflammation of the lungs, accelerated by fracture of the neck of her left thigh-bone, by falling on stairs, at Deptford	3 weeks	Servant, single woman, 31 (post mort.), suffocation from drowning—submerged about 10 minutes	lived about 4 hours	In London Hospital, daughter of a shopman 3, accidental from burns, by her clothes catching fire	5 hours
Guy's Hospital, wife of a Spanish leather-dresser 61, bronchitis, accelerated by a fracture of her left thigh, by falling in going up stairs, at Walworth	2 weeks	Son of a deceased soldier, 12, accidentally drowned when bathing in the Thames (in water 2 days.)		In London Hospital, daughter of a shoemaker 12, accidental from burns, by her clothes catching fire	2 days
77, fracture of thigh bone from an accidental fall	8 days	M. supposed about 25 or 30, drowned—found dead in the bed of the river Thames.		In St. Thomas' Hospital, daughter of a labourer 3, burnt by raking a cinder out of the fire upon her pinafore, at Kennington, 2½ hours	
Charing Cross Hospital, porter 40 (p. m.), internal hæmorrhage from ruptured vessels. Run over by the wheel of an omnibus, having been struck by the pole, in New Coventry-street	about 15 minutes	F. supposed about 30, found dead in the Thames off Hungerford Suspension-bridge—supposed to be drowned—no marks of violence.		In St. Thomas' Hospital, daughter of a hatter 5, burnt by her clothes taking fire, at Thurlow-street, Blackfriars-road	12 days
Western General Dispensary, son of a house painter 8, crushed by the wheels of an omnibus	*	Dress-maker 29, suicide by drowning in the Regent's Canal.		In Guy's Hospital, daughter of a smith 3, burnt by her clothes taking fire, at South-street, Lambeth	14 hours
University College Hospital, widow of a sailor 61, gangrene of the leg. Knocked down and injured by a horse in an omnibus as she was crossing the road intoxicated	2 days	Weaveress 21, found dead in the Regent's Canal, without marks of violence—apparently drowned.		In London Hospital, daughter of a tripe-dresser 3, accidental from scalds	51 days
London Hospital, labourer, 42, run over by a waggon—manslaughter against Joseph Barley	*	Widow 29, found in the mud of the river, but no evidence how she came there (a few hours).		In Guy's Hospital, daughter of a smith 4, scalded by the upsetting of a coffee-pot, containing hot coffee, at Waterloo-road	17 hours
London Hospital, son of a labourer 10, accidentally run over by a van	*	M. 40, found struggling in the Thames—died before assistance could be given—how he fell in unknown.		Poison :—	
London Hospital, wife of a shoe-maker 30, accidentally run over by a waggon	*	Seaman 18, drowned by falling from a schooner when getting on board (under water 6 days.)		Widow of a stockbroker, 50, (post mort.), congestion of the brain from opium—suicide when insane	*
London Hospital, daughter of a bricklayer 8, accidentally run over by a cart—rupture of the liver	1 day	Fellowship porter 49, drowned by falling off the gunwale of a barge (25 days under water).		In Charing Cross Hospital, confectioner, 57, (post mort.), suicide with laudanum taken when insane	*
68 (post mort.), fracture of the skull, and rupture of a blood vessel of the head; having been run over	15 minutes	Seaman 76, found drowned off Horselydown (under water a few days) no evidence how he got into the river.		Other Violence :—	
manslaughter against John Whetham.		M. 34, drowned—no evidence how he came into the water.		F. 28, (no inquest), over exertion in washing	14 days

DEATHS BY SMALL POX, SYPHILIS, MALFORMATION, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTemperance, PRIVATION, PURPURA, HæMORRHAGE, HæMATEMESIS, ETC.

Small Pox :—	duration	Small Pox (continued) :—	duration	Small Pox (continued) :—	duration
NOTE.—It should be stated in all cases whether vaccination had been performed with effect.		PANCRAS; Camden Town.		STEPNEY; Limehouse.	
CHELSEA; South.		F. 31, small pox, modified	14 days	M. 30, variola (vaccinated)	9 days
under 1, small pox (not vaccinated)	*	vaccinated when young at Mortlake—three good cicatrices	*	had small pox some years previously.	
WESTMINSTER; St. John the Evangelist.		peritonitis	*	F. 1, small pox	*
I. 3, variola confluens (not vaccinated)	12 days	Regent's Park.		St. SAVIOUR; St. Saviour.	
St. Margaret.		F. 9 weeks, small pox	4 days	F. 3, small pox	7 days
under 1, debility—variola	*	ISLINGTON; East.		St. GEORGE, SOUTHWARK; Borough Road.	
I. 3, small pox	*	M. 2, variola, confluens (not vaccinated)	9 days	M. 8, small pox (not vaccinated)	10 days
MARYLEBONE; The Rectory.		HACKNEY; West.		NEWINGTON; St. Mary.	
I. 3, variola (not vaccinated)	14 days	M. 25 confluent small pox, with purpura after bleeding (after vaccination)	1 week	F. 12, small pox (vaccinated)	14 days
Christchurch.		F. 2 months, small pox (not vaccinated)	10 days	F. 15 days, small pox (unprotected)	7 days
I. 1, small pox (natural)	10 days	EAST LONDON; St. Botolph.		St. Peter, Walworth.	
PANCRAS; Camden Town.		M. 6 months, small pox (first attack—not vaccinated)	5 days	F. 3, variola (not vaccinated)	7 days
Small Pox Hospital, M. 22, small pox, unmodified	9 days	CITY OF LONDON; North-west.		Trinity.	
vaccinated when young at Hitchin, Herts.; one pretty good cicatrix.		F. 1, small pox (not vaccinated)	*	M. 5 months, small pox (unprotected)	10 days
Small Pox Hospital, M. 21, small pox, confluent	12 days	St. LUKE; Finsbury.		LAMBETH; Waterloo (1st part.)	
vaccinated when young in Kentish Town, two small cicatrices.		M. 2, small pox, confluent (not vaccinated)	14 days	F. 1, small pox (not vaccinated)	9 days
Small Pox Hospital, M. 28, small pox, confluent erythema—gangrene; vaccinated when young in Padua—two indistinct cicatrices.	58 days	BETHNAL GREEN; Church.		effusion	2 days
Small Pox Hospital, F. 19, small pox, confluent, unprotected; petecial	13 days	F. under 1, small pox	5 weeks	Waterloo (2nd part.)	
Small Pox Hospital, F. 10, small pox, confluent, unmodified—erythema and slight erysipelas	21 days	vaccinated without effect.		M. 13 days, small pox	from birth
said to have been vaccinated in infancy—no cicatrix.		WHITECHAPEL; Mile End, New Town.		F. 7 weeks, small pox	3 weeks
		F. 2, small pox (not vaccinated)	*	convulsions	30 hours
		F. 10, confluent small pox (not known whether vaccinated)	14 days	GREENWICH; Woolwich Arsenal.	
				In the Royal Ordnance Hospital, M. 28, small pox	9 days
				vaccinated when an infant.	
				In the Royal Ordnance Hospital, M. 26, (p. m.), peritonitis—marasmus	35 days
				Woodwich Dock Yard.	
				M. 1, small pox (after vaccination)	10 days
				convulsions and hydrocephalus	4 days

DEATHS BY SYPHILIS, HERNIA, DIABETES, STONE, CHILDBIRTH, DELIRIUM TREMENS, INTEMPERANCE, &c. (continued).—

Syphilis:—	duration	Consumption and Childbirth:—	duration	Hæmorrhage; also Hæmorrhage from Organic Disease:—	duration
F. 4 months, syphilitic psoriasis—convulsions	*	F. 37, consumption childbirth	*	In Middlesex Hospital, M. 61, hæmaturia...	*
Malformation:—		Delirium Tremens:—	2 hours	M. 49, (inquest), sudden hæmorrhage from the lungs as he walked in the street.....	*
M. 10 days, anus imperforatus.		In University College Hospital, M. 29, (p.m.), delirium tremens	4 days	M. 56, (inquest), natural death—rupture of a bloodvessel of the thorax—found dead....	*
Hernia:—		At Hoxton House, Lunatic Asylum, M. 30, paralysis	2 months	M. 74, disease of mucous membrane of stomach and intestines—vomiting and hæmorrhage	13 or 14 months
F. 70, strangulated hernia operation not permitted.	8 days	M. 53, delirium tremens—diarrhœa	*	F. 38, hæmorrhage from the stomach.....	4 months
F. 68, hernia—spigelium	*	M. 50, delirium tremens	3 weeks	M. 40, (inquest), hæmorrhage from rupture of a bloodvessel of the chest—natural	instante
M. 60, abscess in groin over hernia—emaciation	*	cerebral congestion	24 hours	Miscellaneous Cases:—	
Diabetes:—		Typhus and Delirium Tremens:—		M. 46, (p.m.), tubercular disease of the supra- renal capsules with a deposit of cancerous matter in the appendix cæci	8 months
In University College Hospital, M. 40, (p.m.), diabetes mellitus	9 months	F. 39, typhus	8 days	M. 25, (inq., post mort.), hypertrophy of the heart accelerated by exertion and excite- ment from riding a restive horse from which he fell in Mount-street, the horse at the time being quiet	instante
In London Hospital, M. 20, diabetes	*	delirium tremens	7 days	In University College Hospital, M. 8, (inquest, post mort.), natural disease of liver—poison- ing by phosphorus suspected	*
Stone:—		Intemperance:—		F. 50, scirrhus mammae	3 days
M. 46, stone in the bladder	1 year	F. 57, (inquest), apoplexy after excessive in- toxication	*	F. 40, operation from scirrhus tumour of mammaria, on Dec. 7th, which was followed by trismus	*
Childbirth:—		At 7, George-alley, Saffron-hill, market-porter, 42, inflammation of bowels aggravated by drink	1 week	In London Hospital, M. 49, morbus linguæ	*
<i>The time elapsing from commencement of labour to death should invariably be returned.</i>		M. 36, (inquest), found dead—having died from excessive intoxication	*	F. 1, inflammation and disease of the bowels of the month	3 weeks
F. 32, puerperal peritonitis	3 days	Privation:—		Mr. Western, Registrar of St. James, Clerkenwell states, that "Three children died from scarlatina in the same family, two on the same day and one six days afterwards. The house is situated in Sand-yard, Turn mill-street, and is described by Mr. Goddard, surgeon to the out-door poor, as close to Fleet-ditch, which is open A large piggery is on the spot."	
F. 19, (inquest), natural exhaustion after child- birth	15 hours	M., prisoner in the Westminster House of Correc- tion, 34, (inquest), debility from want of food, prior to admission into the prison	*		
F. 28, childbirth	5 days	In St. John, sub-district of St. Olave, daughter of an Irish labourer, 7, (inq.), fever brought on by want of food and exposure	6 days		
F. 37, partus	7 days	In same sub-district, daughter of a labourer, 8, (inquest), fever brought on by want of food and exposure	3 weeks		
F. 41, puerperal fever	8 days	Want of Breast-milk:—			
F. 37, puerperal fever	2 days after childbirth	F. 6 weeks, ab lactation—aphtha	6 weeks		
F. 37, puerperal (fever?)	7 days after childbirth	M. 2 days, inanition	*		
F. 42, (inquest), loss of blood in labour—died undelivered—attended by a female	*	F. 17 days, inanition	*		
F. 39, puerperal disease	1 month	Purpura and Scurvy:—			
F. 24, nervous exhaustion during and after natural labour	*	In the Strand Workhouse, M. 43, diarrhœa depending on scurvy	*		
F. 26, cold after childbirth	5 weeks	F. 10 months, purpura hæmorrhagica	8 days		
F. 31, partus	12 days				
F. 42, childbirth	3 hours				
F. 25, puerperal diarrhœa	7 days				

There were 190 cases in which *Inquests* were held, of which three were deaths from privation; 64 in which a Post Mortem Examination was made.

METEOROLOGICAL OBSERVATIONS taken at the ROYAL OBSERVATORY, GREENWICH,
During the Week ending Saturday, 6th January, 1849.

Day.	Phases of the Moon	Mean readings of the Barometer, from 4 Observations, to (corrected and reduced to 32 degrees Fahrenheit.)	Readings of Thermometers										Difference between the Dew Point Temperature and Air Temperature			Difference between the mean temperature of the day, and the mean temperature of the same day on an average of 7 years	Wind as deduced from Osler's Anemometer.		Amount of Horizontal Movement of the Air in each day				Mean Amount of Cloud, 0-10	Rain in inches, read at 9h. p.m.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																							
			Dry			Dew Point Highest in the sun, as shown by a self-regis- ter- ing Thermometer read at midday	Lowest on the grass, as shown by a self-regis- ter- ing Thermometer read at midday	In the Water of the Thames at Greenwich, by self- registering Thermometers, read at 9 o'clock next morning	Highest	Lowest	Mean from 4 Diffs.	Greatest	Least	General Direction			Pressure in lbs. on the square foot		Amount of the Air in each day	Mean Amount of Cloud, 0-10																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																											
			High- est	Low- est	Mean from 6 Obs. Corr.									Mean from 4 Rts. Corr.	A.M.		P.M.	Greatest			Least	Mean of 24 Obs.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																									

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud.
MON.	Nothing was shewn throughout the day.	The sky was overcast till 8h. p.m., and clear afterwards; cirrostratus and fleecy clouds.
TUES.	Nothing was shewn throughout the day.	The sky was cloudless throughout the day.
WED.	Nothing was shewn throughout the day.	The sky was generally one-half covered till 3h. p.m. and overcast afterwards; cirrostratus and scud.
THURS.	Negative with weak tension at 3h. p.m. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and scud. Frozen rain was falling during the afternoon, and rain mingled with sleet during the remainder of the day.
FRID.	Positive and active throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Fog was prevalent during the morning, and misty rain was falling during the earlier portion of the afternoon. From 4h. 50m. p.m. till 9h. p.m. snow fell to the depth of 3 inches.
SAT.	Positive, and tension weak at noon. Nothing was shewn at any other examination.	The sky was overcast till noon, one-half covered till 3h. p.m., clear till 8h. p.m., and the amount of cloud was variable afterwards; cirrostratus and scud.

The height of the column of the barometer is considered to be 159 feet above its mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; an when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at all times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1846.

The results for temperature of the day include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the rays of the sun, and the other placed in a grass fully exposed to the sky, are taken every midday, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that in which the thermometers are read.

Wherever the anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. On Saturday the exposure of the anemometer was clogged with snow.

In reading the 10th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 4 a.m., was 29.5, and the mean reading at 6 p.m. was 31.8.

Births and Deaths registered in London,

During the Week ending Saturday, January 13th, 1849.

ANNUAL SERIES X.]

Weekly Average derived from Deaths of 1844-5-6-7-8, and corrected for increase of Population

Deaths registered in the Week

Births registered in the Week

* The age of a person whose death is ascribed to *pneumonia*, was not stated.
† In consequence of the office of Registrar being vacated by the death of Mr. Walker, no return has been received this week from the North-East Sub-district, City of London. Averages of 8 births, and 5 deaths, derived from the returns of the last 6 weeks are inserted in the above table, instead thereof. The 5 deaths are included under causes not specified.

DISTRICTS OF LONDON,

It will be observed that of the 634 deaths from cholera, 411 occurred on the south side of the Thames.

The 1,448 deaths registered in the Week exhibit an excess of 279 on the weekly average of five Winters. It is produced to a great extent by the sudden increase of mortality from bronehitis and inflammation of the lungs, the deaths from which were 279; those of the former weeks having been 170, while the average is 181. But the excess is principally due to zymotic or epidemic diseases; the deaths enumerated in this class were 407, and amount to nearly double the average. Scarlatina, which is on the decline, was fatal to 63 persons, or double the average; hooping cough, to 68, the average being 42; typhus, to 83, the average being 42; and cholera, to 94, though this disease, when it is not epidemic, carries off on an average less than one in a fortnight at this season of the year. The mortality from small pox corresponds exactly with the average from this disease. Mr. Leonard states, that "Scarlatina of bad type exists in the district to which he is one of the medical officers. A family in Castle street, Leicester-square, has lost six children out of seven, three from the form called "cynanehe maligna," and three from anasarea after scarlatina. The children were of uncleanly habits, and the atmosphere of their apartment was intolerable from ammoniacal gas. The rest of the house, though adjoining stables, was unaffected and free from unpleasant odour." Mr. Robinson, of the Berwick-street sub-district, also mentions a family of eight persons, all living and sleeping in a room of about 10 feet by 14, at No. 7, Green's-court, in which three children have died of the same disease within eleven days; and a fourth was afterwards attacked.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, January 13th, 1849.

The cases of cholera are all certified by Medical Attendants, except two. Of the 94 deaths, 69 occurred in Mr. Drouet's Institution; the remaining 25 in other parts of the Metropolis.

KENSINGTON; Town.

In Kensington Workhouse, M. 10, "cholera (4 days)."

One of the pauper children removed from Drouet's School, at Tooting.

CHELSEA; North West.

M. 8, "cholera."

M. 52, "cholera."

MARYLEBONE; All Souls.

F. 11, "cholera Asiatica (48 hours)."

Mr. Selby, the Deputy Registrar, states, that "this girl died in the house taken by the Strand Union, in Ogle-mews, for the reception of children removed from Drouet's Establishment. When he was taken over the premises, in which excellent arrangements have been made, there was no further appearance of the disease."

ST. PANCRAS; Tottenham.

At 6, Tottenham-court, New-road, widow of a baker, 66, "English cholera (1 week)."

Camden Town.

M. 7, "Asiatic cholera (12 hours)."

M. 7, "Asiatic cholera (24 hours)."

M. 5, "Asiatic cholera (28 hours)."

M. 7, "Asiatic cholera (57 hours)."

F. 8, "Asiatic cholera (24 hours)."

F. 8, "Asiatic cholera (24 hours)."

Mr. Holf, the Registrar, states, that "the above six deaths were of children who had been removed from the Establishment at Tooting to St. Pancras Workhouse. Happily the disease is nearly subdued in the Workhouse."

WANDSWORTH and CLAPHAM; Streatham and Tooting Graveney.

The following list contains all the deaths registered in the week, amounting to 77, which occurred in Mr. Drouet's Infant Poor Establishment, Surrey Hall, inclusive of 8 certified as caused by diarrhoea, dysentery, mesenteric disease, &c. The total deaths registered in this and the previous week, which have occurred in the Institution, or amongst children who have been removed from it since the appearance of the epidemic, amount to 140, of which 122 were returned as caused by cholera, though most of the others were probably connected with the epidemic.

F. 7, "cholera (2 days)."
F. 8, "cholera (18 hours)."
M. 4, "cholera (24 hours); mesenteric disease (several weeks)."
F. 15, "cholera (3 days)."
M. 8, "cholera (23 hours)."
M. 9, "cholera (10 hours)."
M. 10, "cholera (13 hours)."
F. 8, "pneumonia (4 days); cholera (24 hours)."

M. 10, "chronic mesenteritis (4 weeks); atrophy."

F. 7, "cholera (48 hours)."
F. 3, "cholera (48 hours)."
M. 4, "diarrhoea (3 days); cholera (48 hours)."

M. 5, "cholera (20 hours)."
M. 11, "cholera (60 hours)."
M. 6, "cholera (67 hours)."
M. 7, "dysentery (4 weeks)."
F. 7, "cholera relapsed (5 days)."
F. 5, "diarrhoea; cholera (5 days)."
F. 10, "cholera (51 hours)."
M. 4, "cholera (3 hours)."
M. 3, "diarrhoea; cholera (28 hours)."
M. 6, "cholera (56 hours)."
F. 7, "cholera (5 days); exhaustion."
M. 6, "cholera; exhaustion (5 days)."
M. 8, "diarrhoea and vomiting (5 days); cholera."
M. 13, "cholera (5 days); exhaustion."
F. 7, "cholera (3 days)."
F. 13, "cholera (12 hours)."

M. 11, "cholera (2 days); relapsed (3 days)."

F. 6, "cholera (3 days)."
F. 5, "cholera (24 hours)."
F. 11, "cholera."
M. 10, "diarrhoea (3 days)."
F. 4, "cholera (37 hours)."
F. 60, "cholera (24 hours); typhoid fever (3 days)."

(Nurse in the establishment.)

F. 4, "cholera (24 hours)."
M. 8, "dysentery (3 weeks); debility."
F. 7, "cholera (44 hours)."
F. 12, "cholera (12 hours)."
F. 9, "cholera (48 hours)."
M. 6, "cholera (12 hours)."
M. 10, "cholera (8 hours)."
M. 12, "cholera (3 days)."
M. 14, "cholera (3 days)."
M. 15, cholera (4 days)."
F. 62, "Asiatic cholera (12 hours)."

(Nurse in the Establishment.)

F. 7, "cholera, relapse (4 days)."
F. 6, "cholera (3 days)."
F. 5, "mesenteric disease (some weeks); diarrhoea (2 days)."
F. 9, "cholera."
F. 9, "cholera (48 hours)."
M. 7, "cholera (3 days)."
F. 7, "cholera (48 hours)."
M. 12, "cholera (2 hours)."
F. 8, "cholera (12 hours)."

WHITECHAPEL; Goodman's Fields.

At 88, Leman-street, a labourer, 40, "Asiatic cholera (23 hours)."
At same house, son of the above, 7, "Asiatic cholera (12 hours)."

ST. OLAVE; St. John.

At 2, Griffiths-rents, a dress-maker, 25, "malignant cholera (14 hours)."

Mr. Bensted, the Registrar, states that "the above case occurred in a filthy place exposed to an open sewer."

BERMONDSEY; St. Mary.

At Mellick-place, F. 45, "diarrhoea, (2 days); cholera Asiatica (17 hours)."

ST. GEORGE, SOUTHWARK; London Road.

M. 8, "cholera (25 hours)."

NEWINGTON; Walworth.

M. 4, "cholera (3 days)."

M. 9, "cholera (13 hours)."

The latter case is that of one of the children removed from Mr. Drouet's Institution, at Tooting.

WANDSWORTH AND CLAPHAM; Wandsworth.

M. 7, "Asiatic cholera (24 hours)."

M. 36, "cholera (27 hours)."

F. 5, "Asiatic cholera (29 hours)."

Battersea.

At Church-street, gamkeeper, 60, "malignant cholera (11 hours)."
At Church-street, M. 33, "malignant cholera (14 hours)."
At Union Workhouse, an orphan, 8, "malignant cholera (5 days)."
At Union Workhouse, widow, 40, "cholera."

M. 6, "cholera (3 days)."
F. 10, "cholera (12 hours)."
M. 7, "cholera (2 days); exhaustion (4 days)."
M. 14, "cholera, typhoid fever (4 days)."
M. 12, "general debility (some weeks); diarrhoea (3 days)."
F. 5, "cholera, exhaustion (5 days)."
M. 9, "cholera (9 hours)."
M. 10, "cholera (8 hours)."
M. 6, "cholera (3 days)."
F. 4, "cholera (2 days); debility (5 days)."
F. 7, "cholera (2 days); debility (3 days)."
F. 4, "cholera, exhaustion (4 days)."
M. 8, "mesenteric disease (3 weeks); diarrhoea (3 days)."
F. 6, "cholera (5 days); debility."
M. 8, "cholera, relapse (4 days)."
F. 14, "cholera (2 days); typhoid fever (4 days)."
F. 23, "cholera (11 hours)."
(Single woman servant, in the Establishment.)
M. 6, "cholera (3 hours)."
F. 7, "cholera (2 days); exhaustion (3 days)."
M. 6, "cholera (2 days); debility (5 days)."
M. 8, "dysentery, debility (5 weeks)."
M. 5, "cholera (48 hours)."

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive and tension moderate at 3h. p.m. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling from 9h. 30m. p.m. till midnight.
MON.	Positive and tension strong between noon and 3h. p.m. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and scud. Rain was falling frequently during the day.
TUES.	Positive and tension strong at 3h. p.m. Nothing was shewn at any other examination.	The sky was generally covered with cirrostratus and haze till near noon; clear from this time till 3h. p.m., and overcast afterwards. Rain was falling at 9h. p.m.
WED.	Nothing was shewn throughout the day.	The clouds were slightly broken at 9h. p.m.; the sky was otherwise overcast throughout the day; cirrostratus and scud. Rain was falling from 0h. a.m. till 7h. a.m.
THURS.	Nothing was shewn throughout the day.	*The sky was overcast throughout the day; cirrostratus and scud. A gale of wind, with a nearly constant pressure of 5 lbs. on the square foot, and occasional gusts to 8 lbs.; one gust of 10½ lbs. was recorded.
FRID.	Positive and tension strong during the morning and afternoon; at 9h. p.m. nothing was shewn.	One-third portion of the sky was covered at 9h. a.m., and overcast during the remainder of the day; cirrostratus and scud. Slight showers of rain fell during the evening.
SAT.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Frequent squalls of wind and rain occurred during the morning.

The height of the column of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., 1 noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1846.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whevel's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read. On Saturday the exposed part of the anemometer was clogged with snow.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 41° 5', and the mean reading at 9h. p.m. was 41° 7'; the mean readings at the Royal Observatory for the same times were 41° 0' and 41° 6' respectively.

It will be observed that of the 696 deaths from cholera, 451 occurred on the south side of the Thames.

The 1,345 deaths registered in the week, show that a rate of mortality prevails, considerably above the average of five previous winters, the excess being 176. But as compared with the return of the preceding week, they show a decrease of 103, a fact which will be observed in connection with the mean temperature of the air which rose during the period from 39° to 47°. Of men and women at the age of 60 and upwards, 307 sunk under disease or the weight of years; or about 100 more than died weekly before the cold weather set in at the beginning of this month. The deaths caused by bronchitis and pneumonia were 218, and exceed the winter average by 67. Small-pox was fatal to 30 persons, or 9 more than the average; scarlatina to 87, the average being 32; typhus to 68, the average being 42; hooping cough to 58, the average being 42. The mortality from measles which was fatal in only 8 cases, is less than one-third of the average. The deaths from diarrhœa and dysentery were 28, which is more than usual at this season of the year—from cholera 62, of which 27 occurred in Mr. Drouet's Establishment, 6 among children who had been removed from it, and 29 amongst other inhabitants of the Metropolitan Districts. A man died in the sub-district of Rotherhithe of "fever from cold and poor living," according to medical certificate. No inquest appears to have been held on the body.

Five are cases in which Inquests were held: the remainder are all certified by Medical Attendants. Of the 62 deaths, 27 occurred in Mr. Drouet's Institution; the remaining 35 in other parts of the Metropolis.

KENSINGTON; Town.

In the Workhouse, M. 5, "exhaustion consequent upon the mortal effects of fever after an attack of cholera."—*Inquest.*

In Jennings's-buildings, daughter of a farrier, 2, "cholera (12 hours)."

In same buildings, daughter of a farrier, 5, "cholera (26 hours)."

In same buildings, wife of a labourer, 33, "malignant cholera (9 hours)."

Mr. F. Gorham, the Registrar, states, that "the boy mentioned above, was one of 23 children who had been removed from Drouet's school at Tooting. Of this number 16 have been attacked by the disease, but owing to careful treatment only two cases have proved fatal. Jennings's-buildings, where the other cases occurred, is the resort of the poorest class of persons (principally Irish) in the district. In many cases there are as many as seven or ten persons living constantly in a single room, and when their filthy habits and want of proper food are considered, it is matter of surprise that cholera has not sooner made its appearance among them."

CHELSEA; North West.

In the Workhouse, M. 22, "cholera (20 hours); fever and relapse (2 months)."

M. 77, "bilious cholera (3 days)."

ST. PANCRAS; Camden Town.

In St. Pancras Workhouse, M. 11, "Asiatic cholera (3 days)."

In same Workhouse, M. 7, "Asiatic cholera (32 hours)."

In same Workhouse, F. 64, "cholera."

In same Workhouse, F. 9, "Asiatic cholera (26 hours)."

M. 5, "malignant cholera;—the cause thereof not traceable"—*Inquest.*

F. 7 months, "malignant cholera;—the cause thereof not traceable"—*Inquest.*

M. 3, "cholera (36 hours)."

Mr. B. Holl, the Registrar, states, that "the three children who died in the Workhouse, had been brought from Tooting while under the influence of the disease. The woman, aged 64, died in the infirmary of the Workhouse, a building quite unconnected with that part of the house which the children occupied, and not allowed to have any communication with it. The deaths of the other three children occurred in a narrow court which runs out of the Pancras-road through the Whetsthal public-house into Span's-buildings. They had been in good health and condition previously to the attack, and Dr. Quain, who made a *post mortem* examination, states, that there was no symptom of their having suffered otherwise than from the disease of which they died."

HACKNEY; Hackney.

F. 50, "Asiatic cholera (30 hours)."

F. 11, "Asiatic cholera (18 hours); low consecutive fever (3 hours)."

Mr. Steib, the Registrar, states, that "the former was a decided case of Asiatic cholera in a servant who belonged to the Islington poor-house, and had been brought to Hackney to nurse the sick children. The second was another decided case in a girl belonging to the Islington poor-house, who had been brought to Hackney from Drouet's asylum at Tooting."

WANDSWORTH and CLAPHAM; Streatham and Tooting Graveney.

The following list contains all the deaths registered in the week, amounting to 56, which occurred in Mr. Drouet's Infant Poor Establishment, Surrey Hall, inclusive of 9 certified as caused by typhus, mesenteric disease, and congestion of the brain. The total deaths registered in this and the two previous weeks, which have occurred in the Institution, or amongst children who have been removed from it since the appearance of the epidemic, amount to 182, of which 155 were returned as caused by cholera, though it is probable that most of the others were also connected with the epidemic.

M. 8, "cholera (20 hours)."
F. 6, "cholera; consecutive fever (5 days)."
M. 10, "cholera (3 days); typhoid fever (8 days)."
M. 13, "cholera; consecutive fever (7 days)."
M. 8, "diarrhoea (4 days); cholera (2 days)."
F. 9, "cholera (24 hours); typhoid fever (3 days)."
M. 4, "cholera (12 hours)."
M. 12, "cholera (18 hours)."
F. 3, "cholera (3 days); debility (4 days)."
F. 7, "cholera (2 days); typhoid fever (3 days)."
F. 7, "cholera (3 days); debility; serofulous constitution."

F. 9, "cholera (72 hours)."
M. 10, "cholera (24 hours)."
F. 8, "cholera; exhaustion (5 days)."
F. 11, "cholera (33 hours); typhoid fever (4 days)."
M. 12, "typhoid fever; debility (3 weeks)."
M. 6, "mesenteric disease (some weeks); debility (some weeks)."
M. 8, "congestion of the brain (3 days)."
M. 13, "typhoid fever (3 weeks)."
M. 6, "cholera (6 days)."
M. 8, "cholera (3 days)."
M. 14, "fever (7 days); debility.""
M. 13, "cholera (3 days); typhoid fever (4 days)."
M. 6, "mesenteritis; debility (some weeks)."

M. 8, "cholera (3 days); consecutive fever (9 days)."
M. 5, "cholera (5 days)."
F. 6, "cholera, relapse, (7 days)."
M. 10, "cholera (2 days); consecutive fever (5 days)."
M. 13, "cholera (2 days); consecutive fever (8 days)."
F. Nurse in Mr. Drouet's establishment, 54, "typhus mitior (14 days)."
M. 7, "typhoid fever (10 days)."
F. 5, "cholera (3 days)."
F. 8, "cholera; typhoid fever."
F. 4, "mesenteritis (13 days); debility."
M. 10, "cholera (4 days); typhoid fever (9 days)."
M. 12, "cholera (3 days); incipient phthisis (14 days)."

HOLBORN; St. Andrew, Holborn.

M. 56, "Asiatic cholera (16 hours)."

M. 57, "malignant cholera (18 hours)."—*Inquest.*

M. 29, "malignant cholera (2 days)."—*Inquest.*

WHITECHAPEL; Church.

In London Hospital, M. 52, from Denmark, "Asiatic cholera (13 hours)."

Goodman's Fields.

At Front Change, Rosemary Laue, F. 14, "Asiatic cholera, (28 hours)."

At 88, Leman-street, wife of a labourer, 48, "cholera (24 hours)."

Aldgate.

F. 48, "Asiatic cholera."

ST. OLAVE; St. Olave and St. Thomas.

In Hospital, on the 16th Jan., from Greenwich, Greenwich railway guard, 38, "morbus cerebri; laryngitis; pneumonia; morbus Brightii; cholera."

NEWINGTON; Walworth.

At 6, North-street, Walworth, son of a shoemaker, 4 months, "cholera (1 day); convulsions."

In Newington Workhouse, M. 10, "cholera (30 hours)."
Parents unknown.

Mr. Turner states that "this boy had been removed from the establishment at Tooting, and his death is the second that has occurred since the return of the children to Walworth. Some others have been attacked but are now doing well."

LAMBETH; Waterloo, second part.

F. 2, "cholera (12 hours)."

Church, first part.

F. 2 months, "cholera (2 days)."

Stated to have been ill two days, but was seen by the medical man only 9 hours before death.

ST. GILES CAMBERWELL; Camberwell.

In lunatic asylum, Peckham House, Camberwell, widow, 34, "spasmodic cholera (12 hours)."

WANDSWORTH AND CLAPHAM; Wandsworth.

M. 9, "cholera (13 hours)."

M. 8, "malignant cholera (48 hours)."

M. 39, "cholera (15 hours)."

F. 8, "cholera (23 hours)."

F. 76, "cholera (14 hours)."

Battersea.

At Church-street, cordwainer, 50, "cholera (9 hours)."

In Union workhouse, nurse 63, "malignant cholera (24 hours)."

DEATHS from CHOLERA in LONDON in 15 Weeks (ending Jan. 13th, 1849), with the Ages at which they occurred, and the Duration of Attack.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was overcast till 7h. p.m., and cloudless afterwards; cirrostratus and scud. Frequent and violent squalls of wind and rain occurred during the morning and afternoon.
MON.	Positive and tension moderate at 9h. p.m. Nothing was shewn at any other examination.	The sky was generally covered with cirrostratus of various densities till shortly before 9h. p.m., and cloudless from this time till midnight.
TUES.	Nothing was shewn throughout the day.	At 9h. a.m. the sky was one-half covered, and generally overcast during the remainder of the day; cirrostratus and scud. Thin rain was falling during the afternoon and evening.
WED.	Nothing was shewn throughout the day.	The sky was overcast till 7h. p.m., and clear afterwards; cirrostratus and scud. Misty rain was falling generally during the day.
THURS.	Nothing was shewn throughout the day.	At 3h. p.m. three-fourths of the sky were covered, it was otherwise overcast throughout the day; cirrostratus and scud.
FRI.	Nothing was shewn throughout the day.	Small breaks occurred in the clouds during the morning and afternoon; the sky was overcast at night; cirrostratus, fleecy clouds, and scud.
SAT.	Nothing was shewn till noon. Positive and tension variable during the remainder of the day.	The sky was generally covered with cirrostratus and scud throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845. See *Phil. Trans.* Part. 1, 1848.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 46.4, and the mean reading at 9h. p.m. was 47.2; the mean readings at the Royal Observatory for the same times were 44.8 and 47.1 respectively.

Erratum.—In the report of the week ending January 13, omit in last column the note relative to the exposed part of Whewell's anemometer being clogged with snow.

Births and Deaths registered in London,

During the Week ending Saturday, January 27th, 1849.

ANNUAL SERIES X.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

Weekly Average derived from Deaths of 1844-5-6-7-8, and corrected for increase of Population

Males

Total 1169

Deaths registered in the Week

Males

Total.. 1208

Births registered in the Week

Males

Total.. 1576

The ages of two persons are not stated.—In consequence of the office of Registrar being vacant by the death of Mr. Walker, no return has been received this week from North-East Sub-district, City of London. Averages of 8 births, and 5 deaths, derived from the returns of the last 6 weeks are inserted in the above table, instead thereof. Return for the sub-district of Sydenham has not been received in time for publication, but averages of one death and 3 births are taken instead. The 6 deaths are led under Causes not Specified.

It will be observed that of the 741 deaths from cholera, 470 occurred on the south side of the Thames.

The 1,208 deaths registered in the week, show an increase of 39 on the average of five winters, but give a more favourable result than was obtained in the two previous weeks, when they were respectively 1,448 and 1,345. The deaths from diseases affecting the respiratory organs were 245, almost the same as the average; having declined from 325 and 300, the numbers of the two former weeks; while the mean daily temperature ranged from 24°·6, on the 2nd day of this month to 49°·6 on the 25th. 329 deaths were caused by the epidemic class of diseases, making an increase on the average of 108; and of these 76 were from scarlatina, or 44 more than the average; 56 by typhus, or 14 more than the average; while 22 persons died of diarrhoea and dysentery, the weekly average being 14. Of the 45 deaths from cholera, 14 occurred in the district of Wandsworth and Clapham, of which 2 were in the Institution at Tooting. The total number of deaths in this house, or among children who have been removed from it, registered in four weeks, amounts to 188, of which 158 were returned as caused by cholera. The rest are ascribed to dysentery, mesenteric disease, &c. In the last week a boy was registered in the Kent-road sub-district, who died of "natural causes accelerated by exposure to cold," and at Clapham, a woman of 18, who died of "peritonitis, brought on by exposure to cold and damp" after several days' illness. Inquests were held in both cases. A woman and her child died in Leather-market, Bermondsey, of "diarrhoea from want of sufficient nourishment," as certified by medical certificates. The former was seven months advanced in pregnancy. It does not appear that an inquest was held in either of these cases. The medical man adds, that the house was in a most offensive condition from want of drainage.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, January 27th, 1849.

All certified by Medical Attendants, except two. Of the 45 deaths, 2 occurred in Mr. Drouet's Institution; the remaining 43 in other parts of the Metropolis.

KENSINGTON; Town.

In the Workhouse, F. 23, "typhoid fever; consecutive on cholera."
At Jennings's Buildings, widow of a labourer 39, "cholera (19 hours)."
At same Buildings, daughter of a labourer 5, "cholera (46 hours)."
At same Buildings, gardener labourer 31, "cholera (13 hours)."

CHELSEA; South.

M. 65, "cholera (14 hours.)" p. m.

WESTMINSTER; St. John.

At No. 27. Rochester-street, stoker at a gas work, 45, "spasmodic cholera (7 hours)"

Mr. Pearce, the Registrar, states, that "this man laboured under severe diarrhoea during the night preceding the attack, and next day while engaged at his work was stripped to the skin, and exposed to extremes of temperature."

ST. PANCRAS; Tottenham.

At 30, Tavistock-square, F. servant 29, "cholera (3 days)."

Gray's Inn-lane.

At the Royal Free Hospital, F. 30, "cholera (3 days)."

Camden Town.

At the Workhouse, a girl who had been removed from Tooting, 7, "cholera."

HACKNEY; Stamford Hill.

High Hill Ferry, F. 43, "cholera (2 days); typhus (5 days)"

Mr. Montaigne, the Registrar, states, that "the deceased was the wife of a poor labouring man, with 5 children, and occupied a miserable house of only rooms; the lower so damp and uncomfortable that they could not inhabit it. The whole family slept in the upper one, without bed or bedstead. Three of the children now lie ill; and, with regard to two, I am informed by the surgeon, that there is little hope of their recovery. Another case of cholera has shewn itself in a house a few doors from the above. High Hill Ferry is very damp, and the houses are so crowded that many of them have no back yard."

HOLBORN; St. Andrew, East.

All the cases in this sub-district occurred in the Union Workhouse.

F. 22, "cholera (6 hours)."

M. 12, "cholera Asiatica (13 hours);" relapse.

M. 51, "Asiatic cholera (33 hours)."

M. 2, "Asiatic cholera (12 hours)"

F. 40, cholera (15 hours)."

F. 60, "cholera."

M. 71, "Asiatic cholera (21 hours)."

F. 33, "cholera (2 days); consecutive fever (3 days)"

F. 23, "cholera (2 days)."

HOLBORN; St. Andrew, East (continued):—

M. 16, "Asiatic cholera (9 hours)."

F. 40, "cholera (21 hours)."

F. 40, "Asiatic cholera (16 hours)."

F. 22, "Asiatic cholera (22 hours)."

BETHNAL GREEN; Hackney Road.

Toy maker, 53, "cholera (22 hours)."

WHITECHAPEL; Spitalfields.

F. 25, "Asiatic cholera (7 days)."

Goodman's Fields.

At 88, Lenan-street, a labourer, 48, "Asiatic cholera."

ST. SAVIOUR; St. Saviour.

M. 57, "Asiatic cholera (14 hours)."

BERMONDSEY; St. James.

M. 7, "Asiatic cholera (12 hours.)" No medical attendant.

M. 13 months, "diarrhoea (some days); Asiatic cholera (24 hours)."

ST. GEORGE, SOUTHWARK; Kent Road.

At 9, Crown-yard, daughter of a waterman, 5, "Asiatic cholera (20 hours)."

LAMBETH; Church, first part

F. 2, "cholera spasmodica (2 days)."

WANDSWORTH AND CLAPHAM; Wandsworth.

M. 8, "epidemic cholera (4 days)."

F. 4, "cholera (8 hours)."

F. 24, "pneumonia (3 weeks); debility after cholera (5 weeks)."

F. 80, "Asiatic cholera (14 days); exhaustion."

M. 28, "diarrhoea (14 days); Asiatic cholera (17 hours)."

F. 31, "cholera (7 days); exhaustion; miscarriage."

F. 5, "Asiatic cholera."

F. 34, "Asiatic cholera (4 days)."

F. 9, "malignant cholera (25 hours)."

F. 40, "cholera (18 hours)."

Streatham and Tooting Graveney.

In Drouet's Establishment, M. 4, "cholera (13 hours)."

In same Establishment, F. 9, "cholera (3 hours)."

Besides the above, the following deaths from other causes, in this Establishment, were registered in the week:—

F. 6, "mesenteric disease; debility (4 weeks)."

M. 9, "dysentery (3 weeks); debility."

M. 4, "mesenteric disease (3 weeks); debility."

Battersea.

In Ann-street, York-road, wife of an engineer, 36, "malignant cholera (12 hours)."

In Church-street, singlewoman, 32, "Asiatic cholera (7 hours)."

DEATHS from CHOLERA in LONDON in 16 Weeks (ending Jan. 20th, 1849), with the Ages at which they occurred, and the Duration of Attack.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud.
MON.	Between 9h. 30m. and 9h. 45m. a.m., strong electricity was shewn both positive and negative, frequent volleys of sparks and galvanic currents. Nothing was shewn at any other time.	The sky was generally clear from 11h. a.m., till 6h. p.m. and the clouds that prevailed were variable in amount at other times during the day; cirrostratus and scud. Frequent squalls of hail and rain occurred between 9h. a.m., and 10h. a.m.
TUES.	Nothing was shewn throughout the day.	The sky was generally one-half covered with cloud throughout the day.
WED.	Positive and tension strong at 3h. p.m. Nothing was shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and scud.
THURS.	Nothing was shewn throughout the day.	The sky was generally overcast throughout the day; cirrostratus and scud.
FRID.	Positive and tension strong at 9h. p.m. Nothing was shewn at any other examination.	The sky was overcast at 9h. a.m., about one-half covered till 3h. p.m., and clear afterwards; cirrostratus and scud.
SAT.	Positive, and very active till 3h. p.m. Negative and very active at 9h. p.m.	The sky was three-fourths covered with clouds till near noon, and overcast during the remainder of the day; cirrostratus and scud. Rain was falling from 8h. 30m. p.m., till midnight. At 11h. a.m. a portion of a solar halo was visible.

The height of the elstern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1848.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whevel's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 46.3, and the mean reading at 9h. p.m. was 44.8; the mean readings at the Royal Observatory for the same hours were 44.7 and 44.9 respectively.

Errata.—In the report for the week ending Saturday, 11th November, 1848, mean of the highest reading of the thermometer in the water of the Thames for 42.83 read 44.3. In the report for the week ending Saturday, 9th December, 1848, mean reading of the barometer on December 6, for 29.018 in. read 29.185 in., and the mean reading for the week, for 29.444 in. read 29.468 in.

Births and Deaths registered in London,

During the Week ending Saturday, February 3d, 1849.

Weekly Average derived from Deaths of 1844-5-6-7-8, and corrected for increase of Population

Males

Deaths registered in the Week

Males

Births registered in the Week

Males

* The age of a person whose death is ascribed to *erysipelas*, is not stated.
In consequence of the office of Registrar being vacant by the death of Mr. Walker, no return has been received this week from the North-East Sub-district, City of London. Averages of 8 births, and 5 deaths, derived from the returns of the last 6 weeks are inserted in the above table, instead thereof. The returns from the Sub-districts of Saffron Hill and Wandsworth have not been received in time for publication, but averages of 15 deaths and 11 births are taken instead. The average deaths are placed to *Causes not Specified*.

HEALTH OF LONDON DURING THE WEEK.

The Mortality of London, which was excessive in the second week of January, has continuously declined from that time, as shown by the returns of the last three weeks. The 1,137 deaths in the present return are less than the average by 32; notwithstanding the epidemic class of diseases continue to be unusually fatal, and even show a small increase on the former week, arising from hooping-cough and diarrhœa. To the latter disease and dysentery are ascribed 34 deaths, or 20 more than usual at this season; while hooping cough carried off 73 children, or 31 more than the average. The deaths from cholera were 37; or nearly the weekly number throughout the month of December, before the sudden outbreak of the disease in "Surrey Hall." The decrease of mortality is found in the class of diseases of the respiratory organs, pneumonia and bronchitis numbering 169 instead of 181. From phthisis or consumption there were 116 deaths, the weekly average being 143. Mr. Seagrave states with regard to a narrow court, Devonshire-place, St. Mary, Newington, where four deaths of young children had occurred about the same time in nearly contiguous houses, that "it is only eight feet wide, and situated on the bank of an open sewer, which overflows after sudden and heavy rain into these and surrounding houses." Mr. Holl also mentions a house where a girl had died of fever, No. 19, Upper Edmund-street, King's-cross, near the Gas Work. It contains six rooms, of which one is converted into a dust-bin, and is occupied by four families or sixteen persons. Moreover, the front kitchen is used for an infant school, to which 30 children resort, and another school takes possession of a room built in the back yard. A drain runs under the house whence effluvia arise of a most offensive character, increased by the gas water. One or two other children are ill of the fever. At Holland Cottages, St. John the Evangelist, Westminster, two boys in the same house, aged respectively 3 and 8 years, died of "febris and strumous cachexia, the result of defective drainage," the former having been ill 8 days, the latter a month, the cause of death being certified in both cases by the medical attendant. A girl of 3 years was "poisoned by sucking lucifer matches, 25 in number," and died on the third day. A woman of 34 years died of "general phlebitis from a poisoned finger, followed by abortion" after an illness of 9 days. And the following verdict was returned on a young man of 26: "died of acute bronchitis (3 days) accelerated by the severe cold during a journey at night from Liverpool, by railway, in a van not sufficiently protected."

FATAL CASES OF CHOLERA Registered in the Week ending Saturday, February 3d, 1849.

Four are Cases in which Inquests were held; the remainder are all certified by Medical Attendants.

KENSINGTON; Town.

The following 10 cases except the last occurred in Jennings's Buildings:—

- Son of a labourer, 14, "cholera (3 days)."
- Son of a labourer, 14, "cholera (3 days)."
- Labourer, 28, "cholera (5 days)."
- Son of a labourer, 6, "cholera; typhoid fever."
- Son of a labourer, 9, "cholera; typhoid fever."
- Daughter of a labourer, 14, "cholera."
- F. 43, "cholera; fever."
- Daughter of the above, 3, "cholera (11 hours)."
- Another daughter, 7, "cholera (5 hours)."
- F. 12, "cholera, (4 days); typhoid fever, (5 days)."

WESTMINSTER; St. John.

- In Millbank Prison, M. 40, "Asiatic cholera (2 days)."—*Inquest, (p.m.)*
- In same prison, St. Margaret, M. 20, "Asiatic cholera, (32 hours)."—*Inquest.*
- In Westminster Workhouse, F. 25, "low fever, consequent upon an attack of cholera (6 days)."

ST. PANCRAS; Camden Town.

- In St. Pancras Workhouse, F. 12, one of the children removed from Mr. Drouet's establishment, at Tooting, "Asiatic cholera (7 days)."

HACKNEY; Hackney.

- M. 4, "Asiatic cholera, (27 hours)."
- M. 4, "cholera (8 hours)."
- F. 4, "cholera (58 hours)."

Stamford Hill.

- At High Hill Ferry, F. 6, "cholera Asiatica, (10 hours)."
- At High Hill Ferry, M. 18 months, "atrophy, (6 weeks); cholera (3 days)."
- At High Hill Ferry, M. 34, "cholera Asiatica (56 hours)."

Mr. Montaigne, the Registrar, states, that "the girl mentioned above died a few doors from the house where the death of a woman occurred reported in the last weekly return. The boy is the son of the same woman, and is one of the children who were ill at the time of her death. The man was a brick-maker, who lived but a short distance from the place where the first death occurred. High Hill Ferry lies at the foot of a hill from 40 to 60 feet above the bed of the River Lea, at an angle of nearly 45°; and receives all the sewerage and surface water from it. The drainage is very bad, and the houses in which the deaths took place are of the lowest class, and generally very dirty, owing to the poverty of the inhabitants. The other parts of the district are perfectly healthy."

HOLBORN; St. Andrew Eastern.

- M. 12, "measles, consecutive fever (6 weeks); cholera (5 days)."
- F. 17, "cholera (4 days)."
- F. 30, "cholera (21 hours)."
- F. 13 months, "fever (1 month); cholera (5 days)."

SHOREDITCH; Haggerstone, East.

- F. 39, "Asiatic cholera (27 hours)."

Mr. J. Ditchman, the Registrar, states, that "this woman lived at No. 3, James's-place, Margaret-street; the drainage is very bad and the sewage falls into the open sewer formerly mentioned. The landlord of the houses is anxious to do all in his power to remedy the evil as soon as the Commissioners of Sewers lay down proper pipes to carry off the refuse."

Haggerstone, West.

- At John's-terrace, Hackney-road, wife of a silk manufacturer, 36, "diarrhœa (3 days), cholera Asiatica (24 hours)."

WHITECHAPEL; Aldgate.

- M. 21, "cholera (36 hours)," *p. m.*

POPLAR; Bow and Bromley.

- M. 52, "Asiatic cholera (20 hours), premonitory symptoms 2 days previously."—*Inquest.*

- M. 52, "cholera, consecutive fever, congestion of the brain (8 days)."

- F. 25, "natural death, sudden, from cholera (24 hours)."

Mr. Dunstan, the Registrar, states, that "the first of the above was a labourer, who resided in a small house and yard of the most filthy description, situated in Quay-lane, Bromley. The next was a licensed victualler at the "Five Bells," Old Ford, Bow, a low dirty neighbourhood adjoining the river Lea. He had suffered from diarrhœa previously, which was removed by medical aid, but immediately afterwards he incautiously ate a quantity of preserved sloes before going to bed. The third resided in a court near the river Lea, in Bromley. This place had been presented to the Guardians of the Union by the Parochial Authorities, and at the request of the former, the owners of the property promptly removed the cause of complaint. The case occurred some weeks after the cleansing had been effected."

ST. SAVIOUR; St. Saviour.

- F. 9, "Asiatic cholera (5 days)."

BERMONDSEY; St. Mary.

- F. 12, "diarrhœa (2 days), Asiatic cholera (22 hours)."

LAMBETH; Church, second part.

- Son of a plasterer, 5, "cholera, convulsions (32 hours)."
- At 84, Union-street, bootmaker, 21, "natural death—cholera induced by eating cockles, (15 hours)."—*Inquest.*

GREENWICH; St. Nicholas, Deptford.

- M. 20, "cholera (26 hours)."

- F. 37, "cholera (12 hours)."

Mr. Gathercole, the Registrar, states, that "the above deaths took place at the Emigrant Depot on the 30th January. The deceased persons had arrived from Edinburgh by the *Clarence* Steam Ship, on the 29th, in apparently good health, but were seized with illness shortly after their arrival at the depot. Both complained of having suffered much from sea sickness during the voyage. The cases were certified by medical attendant, but a coroner's inquest has since been held, and a verdict returned of "Asiatic cholera."

WANDSWORTH AND CLAPHAM; Battersea.

- F. 5, "malignant cholera, consecutive fever."

In the Sub-district of Streatham and Tooting Graveney, and at Mr. Drouet's Establishment, a Nurse aged 60, died of "typhoid fever," after an illness of one week.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Nothing was shewn throughout the day.	The sky was generally one-half covered till 5h. p.m., cloudless till 10h. p.m., and overcast afterwards; cumuli, cirrostrati, and scud. Rain was falling between 0h. and 7h. a.m., and from 10h. 30m. p.m., till midnight.
MON.	Nothing was shewn throughout the day.	The sky was overcast till noon, and three-fourths covered during the remainder of the day.
TUES.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Heavy rain and large flakes of snow fell between 1h. and 2h. p.m., and misty rain was falling generally during the evening.
WED.	Positive, and tension variable throughout the day.	Portions of light cirrostratus prevailed at, and near 3h. p.m.; the sky was otherwise cloudless throughout the day. Haze was very prevalent during the evening.
THURS.	Positive, and tension strong till 3h. p.m. Negative, with moderate tension at 9h. p.m.	The sky was cloudless till near noon, and overcast during the remainder of the day; cirrostratus and scud. Misty rain was falling between 7h. p.m. and midnight.
FRID.	Nothing was shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and scud. Misty rain was falling generally.
SAT.	Positive, with moderate tension at 9h. p.m.	The sky was overcast throughout the day; cirrostratus and scud; fine rain falling till about 2h. p.m.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1846.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whevel's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 41.2, and the mean reading at 9h. p.m. was 42.3; the mean readings at the Royal Observatory for the same times were 39.9 and 41.5 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, February 10th, 1849.

HEALTH OF LONDON DURING THE WEEK.

THE 1196 deaths, registered in the week, shew an excess on the winter average of 27; and as compared with the return of the previous week, they give an increase of 59. This result, to some extent unfavourable, is the effect of increased fatality of inflammation of the lungs and bronchitis, especially the latter, which in proportion to the population at each age, carries off a greater number of the old, while the former is fatal, almost exclusively, to the young. The deaths from inflammation of the lungs were 103, or just the average; in the previous week they were 91: those from bronchitis were 93, or 15 more than the average; in the former week they were 78, which is the average number. The readings of both the barometer and thermometer were unusually high. Small pox, measles, scarlatina, hooping cough, all show a decrease as compared with the former return; but fatal cases of cholera were 55, from which it appears that this epidemic is on the increase in London. It is worthy of observation, that diarrhoea and dysentery number 37, which is considerably more than occurred in any of the first six weeks of five previous years; while the mortality from diarrhoea, dysentery, and cholera together is equal to six times the weekly average. A man of 29 years died in the Millbank Prison, on whom the following verdict was returned: "pulmonary consumption accelerated by removals from prison to prison, when in an unfit state; he was taken to the infirmary on reception, and died in 8 days."

FATAL CASES OF CHOLERA Registered in the Week ending Saturday, February 10th, 1849.
Five are Cases in which Inquests were held; the remainder are all certified by Medical Attendants.

KENSINGTON; Town.

At Jennings's Buildings, son of a labourer, 12, "cholera (2 days); typhoid fever, (3 days)."

At same Buildings, hawker, 42, "cholera (24 hours)."

At the Workhouse, wife of a labourer, 45, removed from Jennings's Buildings, "cholera (48 hours); typhoid fever, (4 days)."

WESTMINSTER; St. John.

In Millbank Prison, M. 60, "Asiatic cholera, (about 18 hours); diarrhoea, (1 day previous)."—P.M., Inquest.

In same prison, F. 26, "Asiatic cholera, (about 3 days); occasional attacks of diarrhoea for about 19 days previous."—P.M., Inquest.

St. Margaret.

In the Workhouse, M. 54, "diarrhoea (2 days); cholera (12 hours)."

ST. PANCRAS; Tottenham Court.

In University College Hospital, a soldier, 49, "malignant cholera (7 days)," p.m.

Mr. Wells, the Registrar, states that "he was a native of Limerick, and traded from that place to Liverpool, where he was seized with vomiting on Monday, the 29th ult. He came to London on the same night, took lodgings near the Euston Station; was seized with cramp on Tuesday, and admitted into the hospital on Thursday. The cold stage of the disease did not commence till Thursday night. He had been a teetotaler, but broke the pledge and was drunk two days before the attack."

HACKNEY; Hackney.

M. 55, "cholera, (56 hours)."

M. 38, "Asiatic cholera (50 hours); consecutive fever, (4 days)."

M. 35, "cholera (24 hours)."

F. 72, "spasmodic cholera, (13 hours); diarrhoea, collapse, (same day)."

F. 52, "spasmodic cholera, diarrhoea, cramp, (14 hours); collapse."

F. 71, "spasmodic cholera, diarrhoea, cramp, collapse."

F. 82, "cholera, diarrhoea, collapse."

F. 77, "cholera (17 hours)."

The four following cases are those of children belonging to the Islington Poor House, lately removed from Surrey Hall, Tooting, to Park House, Church-street, Hackney.

M. 3, "Asiatic cholera, (18 hours); debility, (13 hours)."

M. 14, "Asiatic cholera, (10 hours)."

M. 7, "Asiatic cholera, (10 hours)."

M. 7, "Asiatic cholera, (17 hours)."

South.

M. 34, "malignant cholera (30 hours)."

F. 37, "Asiatic cholera (2 days)."

Mr. Drewett, the Registrar, states, that "this woman died in a locality of the worst possible condition as regards drainage, most of the inhabitants having no other means of getting rid of refuse in a liquid state than by casting it into the street. The whole of the street is a continued pool of filth. Another case of the same character occurred two doors from the above, but the patient has nearly recovered."

HOLBORN; St. Andrew, Eastern.

At the Union House, F. 12, "Asiatic cholera."

CLERKENWELL; St. James.

In Middlesex House of Detention, F. 26, "malignant cholera produced by causes occurring out of the prison in a person of debilitated condition."—Inquest.

Mr. Western, the Registrar, states, that "this person had come from a house of bad character in Whitechapel, and had been remanded at the Worship-street Police Court on a charge of robbery. She was brought in the prison van about ½ past 7 o'clock on the 9th inst., had a warm bath, and was taken to her cell about ½ past 11 o'clock. The medical man promptly attended, but she sunk at 10 minutes before 5 on the morning of the 10th. It appeared that she had suffered from a very bad leg almost in a state of mortification."

SHOREDITCH; Haggerstow, East.

M. 52, "Asiatic cholera, (21 hours)."

M. 58, "Asiatic cholera, (34 hours)."

F. 47, "Asiatic cholera, (28 hours)."

Mr. Ditchman, the Registrar states that, "the first and second, together with a case of fever, occurred in ill-drained parts where there are no sewers. The third occurred in Ann's-place, in a house adjoining that from which two deaths were returned on the 2nd December. The house stands on the very edge of the open sewer, which has been so often complained of by the parochial authorities and others, to the Commissioners of Sewers. Still it remains in the same filthy state."

BETHNAL GREEN; The Green.

M. 37, "cholera (21 hours)."

F. 46, "cholera (12 hours)."

Church.

F. 27, "Asiatic cholera (22 hours)."

Town.

At 11, Little Manchester-street, M. 29, "cholera (15½ hours)."

Hackney Road.

Hawker of green grocery, 31, "cholera morbus (3½ days)."

This man came in from his occupation on Saturday evening, having stood in the cold for some hours, had a hearty meal, and was taken ill immediately afterwards.

Daughter of the above, 2, "cholera morbus (24 hours)."

Son of a plasterer, 5, "cholera morbus (2½ days)."

His father had been out of employment for 11 weeks, was in poverty, and lived in a crowded, ill drained, and dirty neighbourhood.

In Hackney-road, house painter, 67, "diarrhoea, (14 days), cholera (33 hours)."

Son of a carpenter, 3, "English cholera (30 hours)."

He lived in a low, poor, and crowded neighbourhood.

In Castle-court, Old Castle-street, a blind woman the wife of a mendicant 77 "Sudden death from malignant cholera."—Inquest.

She lived in abject poverty, and in the court is a dust heap, composed of offensive matter. The water is supplied to all the houses by a tap on the main, the drainage from which is defective, and leaves a pool of stagnant water to emit exhalations.

Son of a working-man, 2, "natural death, sudden from cholera."—Inquest.

He was one of a family of seven persons who lived together in a small room where (it appeared at the Inquest) the children fared very hardly. Another child in the family has died of the same disease.

Mr. Murray, the Registrar, also reports the death of a woman 58 years, from "diarrhoea after 5 days illness." She was the widow of a toymaker, who died in the same House from cholera a fortnight ago. He adds, that the poor generally are not acquainted with what has been published regarding the promontory symptoms of cholera.

WHITECHAPEL; Spitalfields.

M. 6, "Asiatic cholera (20 hours)."

M. 9, "Asiatic cholera, without promontory symptoms, (16 hours)."

Goodman's Fields.

At 40, Great Prescott-street, a lady, 68, "Asiatic cholera, (18 hours)."

STEPNEY; Shadwell and Wapping.

M. 1, "malignant cholera, (4 days)."

ST. SAVIOUR; St. Saviour.

M. 5, "Asiatic cholera, (13½ hours)."

M. 43, "diarrhoea, (12 hours); Asiatic cholera, (30 hours)."

M. 20, "Asiatic cholera, (22 hours)."

F. 24, "Asiatic cholera, (50 hours); consecutive fever, ending in convulsions and coma."

BERMONDSEY; St. Mary Magdalen.

At 21, Mellick's-place, Russell-street, F. 42, "diarrhoea, (3 days); cholera maligna, (32 hours)."

ST. GEORGE, SOUTHWARK; Kent-road.

At 5, Mint-street, a labourer, 48, "cholera maligna (3 days)."

LAMBETH; Waterloo Road, first part.

At Whitehorse-street, daughter of a tinman, who vends goods in the streets, 8, "cholera Asiatica (20 hours), exhaustion and coma."

Mr. Mears, the Registrar, states, that "the locality where the above case occurred abounds in dirt, and is crowded by persons of careless and dissolute habits."

GREENWICH; West.

In Dreadnought Hospital Ship, M. 26, "dysentery (4 months), cholera (9 hours)." p. m.

In same Hospital, M. 21, "cholera (3 days)," p. m.

WANDSWORTH; Wandsworth.

M. 9, "cholera (3 days)."

M. 70, "cholera (36 hours)."

F. 69, "Asiatic cholera (12 hours), exhaustion (13 hours)."

Battersea.

At Union Workhouse, son of a milkman, 7, "malignant cholera (4 days), consecutive fever with gastritis (21 days)."

At Church-street, wife of a stable keeper, 56, "malignant cholera (15 hours)."

In the Sub-district of Streatham and Tooting Graveney, and at Mr. Drouet Establishment, a boy, aged 4, died of "fever and mortification" after an illness of 3 weeks.

DAY	ELECTRICITY	GENERAL REMARKS.	
SUN.	Nothing was shewn until about 4h. p.m., when positive, with tension moderate, was exhibited.	The sky was overcast throughout the day; cirrostratus and seud. Light rain fell about 10h. a.m.	<p>the height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See <i>Phil. Trans.</i> Part. 1, 1846.</p> <p>The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.</p> <p>The readings of the two self-registering thermometers, the one placed in the <i>full rays of the sun</i>, and the other placed <i>on grass fully exposed to the sky</i>, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.</p> <p>Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.</p> <p>* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower;" than the average.</p> <p>The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 46°6, and the mean reading at 9h. p.m. was 44°7; the mean readings at the Royal Observatory for the same times were 44°0 and 44°5 respectively.</p> <p>During this week the readings of both the barometer and the thermometer have been remarkably high.</p>
MON.	Positive, with tension moderate at noon. Nothing was shewn at any other examination.	The sky was overcast throughout the day, with the exception of a few breaks at 9h. a.m.; cirrostratus and seud.	
TUES.	Nothing shewn throughout the day.	The sky was overcast throughout the day; cirrostratus and seud.	
WED.	Positive, with tension moderate about 3h. p.m. Nothing shewn at any other examination.	The sky was overcast throughout the day; cirrostratus and seud. Slight rain fell between 9h. a.m., and noon.	
THURS.	Positive, with tension weak at 9h. a.m. Nothing shewn at any other examination.	The sky was one-half covered till about 3h. p.m., when it became overcast until about 7h. 50m. p.m., clear afterwards; cirrostratus and seud. Heavy rain fell between the hours of 4 and 7 p.m.	
FRI.	Positive, and tension moderate at noon. Positive, and tension moderate at 3h. p.m. Nothing shewn at any other examination.	The sky was cloudless till about 8h. a.m., when it became nearly covered with cirrostratus and seud; at noon was overcast and remained so throughout the remainder of the day.	
SAT.	Nothing shewn throughout the day.	The sky was nearly covered with cloud till about noon, when it became overcast, and remained so till about 4h. 30m. p.m., after which time it became cloudless.	

Births and Deaths registered in London,

During the Week ending Saturday, February 17th, 1849.

Females 585
Total.. 1225

Births registered in the Week

Males 779
Females 718
Total.. 1497

* The ages of two persons are not stated:

HEALTH OF LONDON DURING THE WEEK.

THE present Return is of an unfavourable character. It shows that 1,225 deaths were registered in the Week, while the average is 1,169. The increase is still the effect of epidemics, to which 333 deaths are ascribed, or 112 more than have occurred on the average at this season. Amongst these, scarlatina and hooping cough (which have doubled the weekly mortality from these causes, of previous years), diarrhoea and cholera, are observed to predominate. The mortality from cholera and typhus was last week the same, namely, 49 deaths—the latter disease having declined to near the average. A considerable decrease continues to be observed of deaths from consumption; they were 124, or 24 less than the average. Inflammation of the lungs is also less than the average, while bronchitis is considerably above it, though the two diseases usually rise and fall together. From bronchitis the deaths were 103—the average being 78; from pneumonia there were 93, though 103 is the average. Some of the above facts have probably an intimate connexion with the unusual state of the atmosphere. The reading of the barometer was every day above 30 in. Of mean daily readings, the highest, which was on Sunday, was 30·695; the mean of the week was 30·492. At 9h. p.m. on Sunday, the reading was 30·715, which continued till Monday, at 2h. a.m. The highest temperature was 57·8, on Thursday; the mean of the week, was 40·7.

FATAL CASES OF CHOLERA Registered in the Week ending Saturday, February 17th, 1849.
Seven are Cases in which Inquests were held; the remainder are all certified by Medical Attendants.

KENSINGTON; Town.

At Jennings's-buildings, a labourer, 62, "cholera (36 hours)."
At same Buildings, wife of a labourer, 55, "cholera (24 hours)."

ST. PANCRAS; Gray's Inn-lane.

In Royal Free Hospital, labourer from Staffordshire, 60, "Asiatic cholera."—Inquest.

In same Hospital, one of the children from the Holborn Union, brought from Drouet's school, at Tooting, M. 9, "Asiatic cholera."—Inquest.

In same Hospital, one of the children from the Holborn Union, brought from Drouet's school, at Tooting, F. 6, "Asiatic cholera."—Inquest.

Mr. Worrell, the Registrar, states, that "the labourer was brought from the 'House of Refuge for the Destitute,' in Playhouse-yard, and died soon after his arrival at the hospital. He was not known to anybody."

HACKNEY; Hackney.

M. 10, "spasmodic cholera, (18 hours)."

F. 82, "cholera spasmodica."

SHOREDITCH; St. Leonard's.

On 15th February, at No. 10, Union-buildings, F. 65, "Asiatic cholera (5 days)."

The certificate of Mr. Wildbore, the medical attendant, states, that "she was broken up by age and troubles—was badly fed, and slept in a close and unhealthy apartment." Mr. Burchell also states, that "he attended a man (husband to the above) at 10, Union-buildings, who died after 4 days' illness, on the 9th instant, of severe diarrhoea and cramp, &c.; that from the absence of one or two important symptoms, he did not consider the case as true Asiatic cholera. Very bad drainage and a filthy cesspool at the back of the house probably had much to do in exciting the attack."

The two following cases occurred in the Female Refuge for the Destitute:—

F. 19, "diarrhoea (48 hours); cholera, (24 hours)."

F. 17, "cholera (14 hours)."

Mr. Yarrow, the Registrar, states, that "the last two deaths occurred near the rear of the building. The whole of the houses in that locality are badly drained, and the cesspools overflow. The girls had, at a former time, led irregular lives, but had been inmates of the Institution—the former for nearly five months, and the latter for more than a year. He believes from what he had seen during frequent visits to the place, that every attention had been paid to cleanliness, diet, and other comforts."

BETHNAL GREEN; the Green.

M. 38, "Asiatic cholera (6 days)."

Church.

M. 5, "epidemic cholera (18 hours)."

F. 55, "cholera Asiatica, (18 hours)."

Town.

At 3, Little Anchor-street, Church-street, a labourer, 40, "Asiatic cholera, 9½ hrs. after he was first seen by the medical attendant in the last stage of collapse."

Mr. Fox, medical attendant, adds, "that when he first saw him at 1 o'clock in the afternoon of the 13th inst., he was in the last stage of collapse, and that he died at about half-past 10 at night. He was told that deceased had been in this state since an early hour of the morning, and without medical advice, and that he was first attacked with the disease on the 10th inst. whilst employed as a labourer in the Wood-yard, at the London-docks."—(Mr. Gregory's Note.)

Hackney Road.

At No. 7, Victoria-place, M., hawker of poultry, 35, "malignant cholera (12 hours)."

A person in comfortable circumstances. The death occurred in the same house where there were two registered last week in a low neighbourhood.

At 9, Collingwood-street, near Shoreditch church, a nurse child, daughter of a servant, 1, "malignant cholera (16 hours)."

The neighbourhood is low and crowded.

At No. 3, Coal Harbour-street, Hackney-road, son of a cabinet maker, 7, "malignant cholera (44 hours)."

At 1, Charlotte-court, Turville-street, son of a weaver, 16, "malignant cholera (17 hours)."

In destitute circumstances, and in a very close crowded court. He had been at a Sunday school anniversary, and after tea had partaken plentifully of oranges. Immediately after his return he was attacked with premonitory symptoms.

At 25, Coal Harbour-street, Bethnal-green, a hawker of public-house glasses, 44, "Asiatic cholera (45 hours)."

His daughter stated that he had been in very indigent circumstances, and that his strength was very much reduced in consequence.

WHITECHAPEL; Milk-cud New-town.

M. 6, "cholera (12 hours)."

Church.

In Loudon Hospital, M. 31, "Asiatic cholera (14 hours)."

ST. GEORGE IN THE EAST; St. Paul.

M. 58, "diarrhoea (4 days); cholera Asiatica (51 hours)."

St. John.

On the 13th Dec., at St. George's workhouse, a labourer, 19, "natural death, sudden from cholera (24 hours)."—P.M., Inquest.

At St. George's Workhouse, widow of a mariner, 43, "natural death, sudden from cholera (6 hours)."—Inquest.

She had been removed into the house very ill only about 7 hours before death.

Mariner, 19, "sudden death from cholera (24 hours)."—Inquest.

STEPNEY; Shadwell and Wapping.

M. 22, "malignant cholera (21 hours)."

F. 24, a single woman, (no business), "natural death, sudden from Asiatic cholera (3 days)."—Inquest.

POPLAR; Poplar.

M. 43, "Asiatic cholera (7 hours), premonitory symptoms (2 days)."

Bow and Bromley.

F. 56, "cholera (12 hours)."

Had been excessively addicted to drinking.

In Frederick-street, F. 21, Asiatic cholera (23 hours)."

She was an Irish woman employed in the market gardens. Frederick-street has been often reported as in a most filthy condition, and here most of the cholera cases have occurred.

At Grove Hall Asylum, Bow, M. 32, "cholera (36 hours)."

At same Asylum, M. 17, "cholera (12 hours)."

ST. SAVIOUR; Christchurch.

On 17th February, at St. Saviour's Workhouse, wife of a lighterman, 43, "fever (1 month), diarrhoea (3 days), cholera (30 hours)."

BERMONDSEY; Leather Market.

F. 29, "diarrhoea (2 days), Asiatic cholera (24 hours), low fever (4 days)."

St. James.

F. 33, "diarrhoea (1 week), Asiatic cholera (26 hours)."

F. 2, "diarrhoea (2 weeks), Asiatic cholera (2 days)."

ST. GEORGE, SOUTHWARK; Kent Road.

At 1, Cornbury-street, a policeman, 47, "Asiatic cholera (10 hours)."

Borough Road.

M. 65, "malignant cholera (24 hours)."

NEWINGTON; St. Mary.

M. 33, "cholera (2 days)."

CAMBERWELL; Camberwell.

At 1, Clavenden-street, widow of an engineer, 58, "cholera (12 hours)."

ROTHERHITHE; Rotherhithe.

M. 3, "cholera (22 hours)."

M. 18 months, "cholera (24 hours)."

GREENWICH; St. Nicholas, Deptford.

M. 26, "Asiatic cholera."

He was a seaman on board Her Majesty's Ship "Adventure" lying off Deptford.

West.

The five following cases occurred in the Dreadnought Hospital:—

M. 19, "cholera (4 days)."—P.M.

M. 23, "ulcerated leg, crabs, cholera (5 days)," p. m.

M. 23, "fever (1 week), cholera (5 days)," p. m.

M. 21, "cholera (6 days)," p. m.

M. 17, "cholera (4 days)," p. m.

WANDSWORTH AND CLAPHAM; Battersea.

M. 32, "cholera (3 days), low fever (2 days)."

In the Sub-district of Streatham and Tooting Graveny, and at Mr. Drouet's Establishment, a young man, aged 16, died of "fever and pneumonia" after an illness of 16 days, and a boy, aged 5, died of "chronic mesenteritis and atrophy," after an illness of 12 weeks.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	During the greater part of the 12th, 13th, 14th, and 16th days active positive electricity was shewn. Nothing was exhibited at any other time during the week.	The sky was cloudless throughout the day. Haze prevailed. On this day at 9h. p.m. the reading of the barometer was 30in. 715, and this reading continued till Monday at 2h. a.m., when it decreased slightly.
MON.		The sky was cloudless throughout the day. A thick fog prevailed.
TUES.		The sky was cloudless at 9h. a.m., and became three-fourths covered at noon, cloudless at 3h. p.m., and overcast at 9h. p.m. Cirrostratus and scud.
WED.		The sky was cloudless until 3h. p.m., when it became nearly overcast, and again cloudless at 9h. p.m. Cirrostratus and scud.
THURS.		The sky was three-fourths covered by cloud at 9h. a.m., and mostly cloudless the remainder of the day. Cirrostratus and scud.
FRID.		The sky was covered with cloud till about 8h. p.m., when it became cloudless. A solar halo was visible about 2h. p.m.
SAT.		The sky was cloudless for the most part throughout the day. The reading of the barometer throughout this week has been remarkably high.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1848.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on a wall fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whevel's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

* In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 37°3, and the mean reading at 9h. p.m. was 40°6; the mean readings at the Royal Observatory for the same times were 35°9 and 40°8 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, February 24th, 1849.

ANNUAL SERIES X.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL.

[No. 8.]

Weekly Average derived from Deaths of 1844-5-6-7-8, and corrected for increase of Population	Males	592	Deaths registered in the Week	Males	605	Births registered in the Week	Males	735
	Females	577		Females	586		Females	755
	Total	1169		Total	1191		Total	1490

* The ages of four persons are not stated.
 † The Return from the Sub-district of Borough-road has not been received this Week in time for publication. Averages of 10 births and 12 deaths derived from the Returns of six previous Weeks are inserted instead thereof; the deaths being placed to causes not specified.

HEALTH OF LONDON DURING THE WEEK.

THE 1191 deaths in London are 22 above the average, and show a small decrease on the previous week. The rate of mortality from diseases of the respiratory organs is the same as on the average has prevailed in five previous winters; for though, as was observed last week, the deaths from bronchitis are 118, or 40 above the average, those from pneumonia are 88, or 15 below it. But zymotic diseases continue to show a great excess; they were fatal to 100 persons more than died weekly in the previous years, the prevailing epidemics being hooping cough, scarlatina, diarrhoea, and cholera. Hooping cough, which carries off the young, as bronchitis the old, caused 76 deaths, or 34 more than the average; scarlatina 50, or 18 above the average. It is remarked, that the cases in which death followed from effusion consequent on scarlatina are considerably fewer, relatively, than when the epidemic was at its height. The mortality from measles is at present low; that from small pox is near the average. A woman died from "variola and disease of the heart" at the age of 68. Four persons died of intemperance, on one of whom an inquest was held; 6 died of delirium tremens, which is in many cases the result of intemperance. A boy of 16 is certified to have died of "starvation after an attack of small pox," (*no Inquest*). A woman died in Lambeth at the advanced age of 100 years, from ulceration of the throat, after an illness of 2 months. Of the 40 deaths from cholera, 10 occurred at the Female Refuge for the Destitute in Shoreditch, and 16 at Warburton's Lunatic Asylum in Bethnal Green. The barometer was highest on Sunday, having been 30.333, and lowest on Saturday, when it fell to 29.520. The mean temperature of the week was 45°.4.

Mr. Steib, the Registrar of the Hackney Sub-district, states in reference to four cases of cholera in the Park House, Church-street, and published in the Return for Week ending February 10th, that "the deaths happened on the 10th, 11th, and 12th of January, but in consequence of the Inquests having been several times adjourned, and the inquiry afterwards abandoned, they were not registered till the 5th of February." It will be observed, that the Return professes to give the deaths *registered* in the Week; but, except in Inquests, which are returned by the Coroners, registration is performed shortly after death.

FATAL CASES OF CHOLERA Registered in the Week ending Saturday, February 24th, 1849.

Four are Cases in which Inquests were held; the remainder are all certified by Medical Attendants.

HOLBORN; St. George the Martyr.

M. 13, cholera, (3 days.)"

WEST LONDON; North.

At Union House, West-street, a labourer, 40, "cholera."

SHOREDITCH; St. Leonard's.

At 4, Hudson's-court, Kingsland-road, on the 19th of February, wife of a shoemaker, 41, "cholera, (8 hours.)"

Mr. Yarrow, the Registrar, states, that "this is a very unhealthy court. The deceased, who was in poor and distressed circumstances, had a miscarriage at Christmas, and 7 days afterwards undertook a day's charring at a butcher's shop adjoining. She was then taken ill, and confined for 3 weeks, at the end of which time cholera supervened."

The 10 following cases occurred in the Female Refuge for the Destitute:—

On the 18th February, F., servant, 14, "Asiatic cholera (4 days.)"

On the 18th February, F., servant, 18, "Asiatic cholera, (3 days.)"

On the 18th February, F., matron, 40, "diarrhoea, (10 hours;) Asiatic cholera, (12 hours.)"

On the 18th February, F., servant, 17, "Asiatic cholera (40 hours.)"

On the 20th February, F. servant, 22, "cholera (48 hours.)"

On the 20th February, F., temporary matron, 36, "cholera (24 hours.)"

On the 20th February, daughter of a labourer in the County of Devon, 11, "Asiatic cholera (30 hours); disease of the chest, (*duration unknown.*)"

On the 21st February, F. servant, 24, "Asiatic cholera (3 days); secondary fever, (5 days.)"

On the 22d February, F. servant, 25, "Asiatic cholera, (3 days.)"

On the 23d February, F. servant, 14, "natural death from Asiatic cholera."—*Inquest.*

BETHNAL GREEN; the Green.

The 16 following Cases occurred in Messrs. Warburton's Lunatic Asylum:—

F. 55, "mania (15 years), diarrhoea (6 hours), cholera (8 hours.)"

F. 45, "cholera, collapse (14 hours.)"

F. 40, "mania, cholera (13 hours.)"

F. 52, "mania, cholera (15 hours.)"

F. 39, "mania, diarrhoea (6 hours), cholera (18 hours.)"

F. 70, "mania, cholera (11 hours.)"

F. 35, "mania, cholera (14 hours.)"

F. 48, "diarrhoea (4 hours), cholera (15 hours.)"

F. 48, "mania, cholera (23 hours.)"

F. 26, "idiocy, cholera (10 hours.)"

Warburton's Asylum (*continued*):—

F. 40, "mania, diarrhoea (11 hours), cholera (19 hours.)"

F. 38, "mania, cholera (8½ hours.)"

F. 30, "mania, cholera (24 hours.)"

F. 35, "epilepsy, cholera (72 hours.)"

F. 70, "mania, cholera (3 days.)"

F. 49, "mania, cholera (88 hours.)"

Hackney Road.

At 18, Clare-street, Hackney-road, cheesemonger, out of business, 49, "diarrhoea (3 days); malignant cholera with collapse (2½ days.)"

Mr. Murray, the Registrar, states, that "deceased was in reduced circumstance and suffered under distress of mind, and lowness of vital energy."

WHITECHAPEL; Whitechapel, North.

At Wellington-street, on the 8th inst., son of a respectable labourer, 21 months, "natural death; sudden from Asiatic cholera."—*Inquest.*

The two girls who follow belonged to one family not long from Ireland; the younger died on the 9th, the other on the 10th, in Queen Ann-street.

F. 2, "sudden death of cholera (12 hours.)"—*Inquest.*

F. 5, "sudden death of cholera (12 hours.)"—*Inquest.*

ST. GEORGE IN THE EAST; St. Paul.

A coal-whipper, 45, "consecutive fever (5 days), cholera maligna (2 days.)"

M. 67, "cholera (24 hours.)"

The deceased was a pauper removed from the workhouse to 3, Bath-terrace, New-road, which was lately taken for cholera patients.

St. John.

At St. George's Workhouse, a mariner, 49, "cholera."

CAMBERWELL; Peckham.

Daughter of a labourer 3, residing at No. 2, Maria-terrace, Peckham-fields, "diarrhoea (2 days), Asiatic cholera (3 hours.)"

ROTHERHITHE; Rotherhithe.

M. 5, "cholera (7½ hours.)"

GREENWICH; Greenwich, West.

In Dreadnought Hospital, M. 16, "cholera (8 days)," *p. m.*

WANDSWORTH AND CLAPHAM; Battersea.

At Bridge-road, son of a warehouseman, 15, "malignant cholera (4 days.)"

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	No electricity has been shewn throughout the greater part of the week. Strong negative electricity however was exhibited during heavy rain on the 24th.	The sky was overcast throughout the day; cirrostratus and scud. A thick fog prevailed at intervals during the day.
MON.		Overcast throughout the day; cirrostratus and scud.
TUES.		The sky was three-fourths covered till about 9h. a.m., and overcast afterwards; cirrostratus and scud. Rain commenced falling at 11h. 30m. a.m., and ceased about 8h. p.m.
WED.		The sky was nearly covered throughout the greater part of the day; cirrostratus and scud. Slight rain fell during the night.
THURS.		The sky was cloudless at 9h. a.m., about one-half covered at noon, three-fourths covered at 3h. p.m., and cloudless at 9h. p.m. Cirrostratus and scud. Several auroral streamers were observed during the evening, and the magnets were disturbed.
FRID.		The sky was one-third covered at 9h. a.m., three-fourths at noon, three-fourths at 3h. p.m., and about one-third at 9h. p.m.; cirrostratus and scud.
SAT.		The sky was overcast throughout the day; cirrostratus and scud. Heavy rain commenced falling about 9h. 30m. a.m., and continued to fall until 2h. 10m. p.m.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; or when partially cloudy by estimating a number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at the times are converted into mean daily rain by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Philosophical Transactions*, Part 1, 1848.

The results for temperature of the day include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the rays of the sun, and the other placed *grass* fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that in which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m. the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

* In reading the 16th column, it will be borne in mind that + is read "higher" and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 10 a.m. was 45°3; and the mean reading at 1 p.m. was 45°4; the mean readings at the Royal Observatory for the same times were 45°1 and 45°0 respectively.

HEALTH OF LONDON DURING THE WEEK.

THE 1138 deaths are 31 below the winter average, and show a decline on the previous week of 53. The return, therefore, renders on the whole a favourable account of the public health, but it will be observed that scarlatina, though it has declined, continues considerably above the amount of previous years, and whooping cough has become unusually fatal. The former disease carried off 57, while the average is 32; the latter 89, while the average is 42. The deaths from diarrhoea and dysentery, which seem to have been on the increase at this season during the last three or four years were 23, the average being 14: those from cholera were 35, of which, with a case registered as "diarrhoea and collapse," 5 occurred in Warburton's Lunatic Asylum, Bethnal-green; 2 occurred in the Refuge for the Destitute, Hackney-road. The mortality from small pox and measles is unusually low;—that from typhus has fallen to the average, and is less than has been observed for a long period. The mortality from bronchitis is near the average, while pneumonia was fatal only to 81, which is 22 below the average. The greatest mean height of the barometer in the week was on Saturday, when the reading was 30.288. The highest temperature was also on Saturday, and was 55°·5. The mean of the week was 42°·4. Two men died of intemperance, one man of exposure, and a child of 21 months was certified by medical attendant to have died of "extreme cold and inflammation of the chest." At Kensington, a girl of 6 years died of hydrocephalus, a case in which the coroner's jury considered that the deceased had not received food and proper attention, owing to the wilful neglect of some of her relatives. An infant of 5 days died in 16 hours from the effects of Dover's powder, prescribed for the mother of deceased, but given under a misunderstanding of verbal instructions from the medical attendant, the paper containing the medicine not having inscribed on it the name of the person for whom it was intended (*Verdict of Coroner's Jury.*) In Hackney, South, a girl of 2 years died, according to verdict, from the fætid vapours of a sewer; and in the same Sub-district, a grave-digger was suffocated by the earth falling in when engaged in his occupation. A girl of 4 years died of "cynanche parotidæa," a disease which is rarely fatal. The case is enumerated, in the Abstract, under *scarlatina*, that the list of causes of death may not be unduly extended.

[For an account of the storm on Wednesday, when the pressure on the anemometer rose to 22 lbs., see the Greenwich Observations.]

FATAL CASES OF CHOLERA Registered in the Week ending Saturday, March 3d, 1849.

Three are Cases in which Inquests were held; the remainder are all certified by Medical Attendants.

KENSINGTON; St. Pauls, Hammersmith.

At Shepherd's Bush, M. 51, "cholera (4 days)"

At same place, F. 4, "cholera (7 hours)."

Mr. Roy, the Registrar, states, that "the above occurred in a row of eight cottages on the Uxbridge-road, which are inhabited by the families of labourers, of whom some appear to be in great destitution. The locality is swampy, badly drained, and has some stagnant ditches. In the rear of the cottages, at the distance of 25 feet, is a foul ditch, into which a quantity of nuisance is emptied; and before it was cleaned out yesterday it contained about 2 feet of black offensive matter. Representations, personal and by memorial, have been more than once made to the Commissioners of Sewers, under whose jurisdiction the neighbourhood is, but no attention has been paid hitherto. Other cases are now under treatment, and some of them present very unfavourable symptoms."

Town.

In James-street, wife of a labourer, 28, "cholera Asiatica (14 hours)."

In same street, wife of a hawker, 58, "diarrhoea (3 days); cholera."

In same street, widow of a labourer, 68, "cholera, (14 hours)."

CHelsea; South.

M. 79, "diarrhoea (5 hours), cholera morbus (15 hours)," p. m.

HACKNEY; Hackney.

F. 79, "debility succeeding spasmodic cholera, (7 days); collapse."

South.

M. 23, "natural death from cholera (45 hours.)"—*Inquest.*

SHOREDITCH; St. Leonards.

An artist, 43, "cholera (3 days), low fever (2 days)."

No probable cause of attack can be discovered.

At 31, Hoxton-square, daughter of the above artist, 6, "cholera (16 hours)."

The deceased belonged to a very respectable family, and possessed every comfort.

The two following cases occurred in the Female Refuge for the Destitute:—

F. servant, 14, "diarrhoea (2 days), Asiatic cholera (5 days)."

F. servant, 14, "Asiatic cholera (6 days)."

BETHNAL GREEN; The Green.

M. 27, "cholera, (7 days)."

M. 4 months, "cholera (9 days)."

F. 30, "cholera, (5 days)."

F. 18, "cholera, (7 days)."

F. 11 months, "cholera (4 days)."

BETHNAL GREEN; The Green (*continued*):—

The six following cases occurred in Messrs. Warburton's Lunatic Asylum:—

F. 28, "mania, cholera (6 days)."

F. 70, "mania, cholera (7 days)."

F. 54, "mania, cholera (28 hours)."

F. 70, "mania, cholera (24 hours)."

F. 70, "mania, cholera (55 hours)."

F. 33, "mania, diarrhoea (12 hours); collapse (108 hours)."

Town.

At 10, Little George-street, son of a Chandler, 4, "epidemic cholera (3 days)."

At 2, Nelson-street, son of a general dealer, 3, "diseased brain (2 months), malignant cholera (3 days)."

WHITECHAPEL; Goodman's Fields.

At the cholera hospital, 88, Leman-street, son of a labourer, 11, "Asiatic cholera."

At same hospital, F. servant, 38, "Asiatic cholera."

Aldgate.

In the Tower of London, M. 5, "cholera (15 hours)." A healthy situation.

ST. GEORGE IN THE EAST; St. Paul.

On March 1st, at the parish cholera house, a mariner, 23, "cholera Asiatica (3 days); premonitory symptoms (1 day); collapse, (3 days); no cramps in extremities."

At same house, a pauper from the workhouse, F. 55, "cholera (10 hours)."

POPLAR; Bow and Bromley.

F. 1, "Asiatic cholera (24 hours)."

The above occurred at Old Ford, Bow, adjoining the River Lea, in a factory yard. Almost every case of cholera in Bow has occurred in this neighbourhood.

A labourer at a distillery in Bromley, 36, "natural death, sudden of Asiatic cholera (12 hours)."—*Inquest.*

Deceased resided in one of the streets which have been referred to before as being very deficient in drainage.

At Grove Hall Lunatic Asylum, M. 14, "natural death, sudden from cholera (2 hours)."—*Inquest.*

ST. GEORGE, SOUTHWARK; Kent Road.

M. 37, "cholera maligna (30 hours)."

ROTHERHITHE; Rotherhithe.

F. 38, "cholera (3 days)."

GREENWICH; Greenwich, West.

In Dreadnought Hospital, M. 26, "typhus (2 weeks), cholera (3 days)."

THE DEATHS in Wandsworth and Clapham were not included in the *Weekly Returns* for London till the first week of 1844; nor those in Lewisham and Hampstead till the first week of 1847. But in this Table, Weekly Averages are inserted for the previous years, being derived from deaths which occurred in the Quarter in these Districts.

CASES OF DIARRHŒA AND DYSENTERY returned
in the Metropolis in the same weeks of 6 Years.

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive, and tension strong at 9h. a.m., and at 5h. 30m. p.m. Negative and very active at noon. Nothing was shewn at other examinations.	The sky was overcast till 4h. p.m.; from this time till 7h. p.m., the amount of cloud was variable, and the sky was overcast afterwards; cirrostratus and scud. A heavy shower of hail and rain occurred at 1h. 50m. p.m., and steady rain was falling from 9h. p.m. till midnight.
MON.	Positive and strong at 9h. a.m. Nothing was shewn at other times.	The sky was overcast till 9h. a.m., one-half covered till 7h. p.m., and generally clear afterwards; cumuli, cirrostratus and scud. Rain was falling from 0h. a.m., till 9h. a.m.
TUES.	Nothing was shewn till near noon. Positive, and tension strong during the remainder of the day.	From noon till 4h. p.m., one-half of the sky was covered, and it was generally clear at other times; cumuli, cirrostrati, and scud. Auroral streamers were visible during the evening. The magnets were disturbed.
WED.	Nothing was shewn throughout the day.	The sky was overcast throughout the day.
THURS.	Nothing was shewn throughout the day.	From noon till 7h. 30m. p.m., the sky was cloudless, and overcast at other times; cirrostratus and scud.
FRI.	Nothing was shewn throughout the day.	The sky was generally one-half covered with cirrostratus and scud throughout the day.
SAT.	Positive, and tension strong at 9h. a.m., noon, 3h. p.m., and 9h. p.m.	The sky was generally overcast throughout the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's first glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1848.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

Whewell's anemometer (from the indications of which the estimation of horizontal movement is made) is read at 10h. a.m., and the result given is for the 24 hours preceding. It is placed here opposite to the civil day which precedes that on which the anemometer is read.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower;" than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 43°; and the mean reading at 9h. p.m. was 40°; the mean readings at the Royal Observatory for the same times were 42°5 and 40°0 respectively.

On Wednesday, February 28, at 6h. a.m., the wind began to blow strongly, and between this time and 9h. a.m., its average pressure was about 4lbs. on the square foot, with frequent gusts amounting to 5 and 6lbs. pressure; between 9h. a.m. and 2h. p.m. the average pressure was 5lbs., with frequent gusts amounting to 7lbs. and 8lbs.; after 2h. p.m. the force increased, and pressures of 10lbs., 15lbs., and 16lbs. occurred; at 2h. 55m. p.m. a very heavy and prolonged gust took place of 22lbs. pressure; at this time the wooden building upon which Whewell's Anemometer was placed was blown over, and the instrument was broken to pieces; the gale continued till 6h. p.m. with an average pressure of 7lbs., and of frequent gusts varying from 10lbs. to 17lbs. At about 6h. p.m. the wind suddenly subsided. The direction of the wind was S.W. till 5h. p.m.; at 6h. p.m. it was W. by S.; at 7h. p.m. it was N.N.W.; at 7h. 5m. p.m. it was N.N.E.; at 8h. p.m. it was N.W.; at 9h. p.m. it was W., and it was mostly W.S.W. afterwards.

The reading of Whewell's Anemometer when it was broken, was such as to indicate that the horizontal movement of the air in the preceding 5 hours was 105 miles.

Births and Deaths registered in London,

During the Week ending Saturday, March 10th, 1849.

ANNUAL SERIES X.]

Weekly Average derived from Deaths of 1844-5-6-7-8, and corrected for increase of Population	Males	592	Deaths registered in the Week	Males	531	Births registered in the Week	Males	821
	Females	577		Females	516		Females	723
	Total	1169		Total	1047		Total	1544

* The age of a person, whose death was ascribed to pneumonia, is not stated.

HEALTH OF LONDON DURING THE WEEK.

It is gratifying to observe a decided improvement in the public health during the last week. The deaths registered in London, which in the three previous weeks were respectively 1225, 1191, 1138, have declined to 1047, or 122 less than the winter average. A remarkable improvement has occurred in the mortality from epidemics; for, whereas this class of diseases was fatal in the three previous weeks to 333, 318 and 310 persons respectively, in the last week the deaths were only 243, which is little above the average. Small pox does not prevail much at present; measles is unusually low. Searlatina and hooping cough show a decrease on the previous weeks; and now the mortality from the former does not much exceed the average. The deaths from hooping-cough were 69, which is more than the average by 27. Typhus has fallen to the average, namely 42 deaths. Fatal cases of diarrhoea and dysentery were 21, being 7 more than the average: of cholera, only 15, though in the three preceding weeks they were 49, 40, and 35. Of the 15, two occurred in Warburton's Lunatic Asylum, Bethnal-green; five in the Workhouse of St. George in the East. The mortality from diseases of the organs of circulation is also unusually low. Three men died of delirium tremens; a man and a woman of intemperance (both cases attended with epilepsy); also a woman from falling in the street when drunk. A woman died in Mile End, "8 days after childbirth, of typhoid fever, from previous poor living." A man of 34 years died of "intestinal disease—obstruction of colon through its whole length," (*post mort.*). The obstruction had continued 34 days, but was removed by medical aid before death. The patient had taken opium medicinally for the last nine years, and latterly in doses of three and sometimes four half drachms daily.

The mean height of the barometer was above 30 in. daily, except on Wednesday, Thursday, and Friday; the highest, which was on Tuesday, was 30.385. The thermometer was highest on Sunday, when it was 60°; the highest of each day fell almost continuously to 42° on Friday. The mean temperature of the week was 43°. The mean temperature of each day continued above that of the same day on an average of 7 years, till Friday. The wind was for the most part in the south-west, till Thursday, when it veered to north and north-west.

FATAL CASES OF CHOLERA Registered in the Week ending Saturday, March 10th, 1849.

Two are Cases in which Inquests were held; the remainder are all certified by Medical Attendants.

KENSINGTON; St. Paul's, Hammersmith.

M. 6, "cholera, (6 days.)"

CHELSEA; South.

M. 68, "cholera morbus (30 hours.)"

F. 66, "diarrhoea (11 hours.); cholera morbus (20 hours.)"

WESTMINSTER; St. Margaret.

In House of Correction, M. prisoner, 31, "Asiatic cholera, (38 hours), accelerated by want of common necessaries of life, prior to his reception into the prison."—*Inquest.*

BETHNAL GREEN; The Green.

The two following cases occurred in Messrs. Warburton's Lunatic Asylum:—

F. 75, "mania, cholera (3 days.)"

F. 65, "mania, consecutive fever after cholera."

ST. GEORGE IN THE EAST; St. John.

The five following cases occurred in St. George's Workhouse:—

Mariner, 64, "cholera."

Mariner, 69, "cholera (24 hours.)"

ST. GEORGE IN THE EAST; St. John (*continued*):—

Currier, 73, "cholera."

Gun-maker, 77, "cholera."

Wife of a gardener, 80, "cholera."

STEPNEY; Limchouse.

M. 49, "natural death, sudden, from Asiatic cholera."—*Inquest.*

ST. OLAVE; St. Olave.

In St. Thomas' Hospital, an American sailor, brought from the City of London, 30, "cholera (24 hours.)"

BERMONDSEY; Leather Market.

F. 53, "cholera, (2 days.)"

The Medical Man states, that "deceased was of very intemperate habits, which doubtless predisposed her to take the disease."

ST. GEORGE, SOUTHWARK; Kent-road.

At 2, Crown-yard, son of a carman, 2, "Asiatic cholera, (3 days)"

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	On March 4, 5, 6, 8, and 10, positive electricity with moderate tension was exhibited; nothing shewn at other times.	The sky was cloudless at 10h. a.m.; one-third was covered by loose scud at noon; cloudless at 5h. p.m., and at 9h. p.m.
MON.		The sky was for the most part overcast throughout the day; cirrostratus and scud.
TUES.		The sky was about one-fifth covered by cloud at 9h. a.m.; overcast at noon; one-third covered at 3h. p.m.; and about one-half at 9h. p.m., at which time an imperfect lunar halo was visible. Clouds, cirrostratus, and scud.
WED.		The sky was three-fourths covered by cloud at 9h. a.m., and noon; and was overcast at 3h. p.m., and 9h. p.m.; cirrostratus and scud. Slight rain commenced falling about 7h. p.m., and ceased about midnight.
THURS.		The sky was cloudless at 9h. a.m.; overcast at noon; and about one-half covered at 3h. p.m., and 9h. p.m.; cirrostratus and scud. Frequent showers of hail, rain, and snow fell during the day, the ground being partially covered by snow at 9h. p.m.
FRID.		The sky was one-fifth covered by cloud at 9h. a.m.; three-fourths at noon; one-half at 3h. p.m., and nearly overcast at 9h. p.m. Snow commenced falling about 8h. p.m. and ceased at about 9h. p.m.
SAT.		The sky was about one-third covered by cloud at 9h. a.m.; nearly overcast at noon; one-third covered at 3h. p.m., and one-half covered at 9h. p.m. Cirrostratus and scud.

The height of the cistern of the barometer is considered to be 150 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1846.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and — "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 42°4, and the mean reading at 9h. p.m. was 41°1; the mean readings at the Royal Observatory for the same times were 42°2 and 40°6 respectively.

Births and Deaths registered in London,

During the Week ending Saturday, March 17th, 1849.

ANNUAL SERIES X.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL. (No. 11.)

Weekly Average derived from Deaths of 1844-5-6-7-8, and corrected for increase of Population	Males	592	Deaths registered in the Week	Males	537	Births registered in the Week	Males	768
	Females	577		Females	546		Females	753
	Total	1169		Total	1083		Total	1521

* The age of a person, whose death is ascribed to hæmorrhage, is not stated.
† The return from the Sub-district of Wandsworth, was not received in time for publication, but an average of 5 births and 7 deaths are taken instead. The average deaths are placed to causes not specified.

HEALTH OF LONDON DURING THE WEEK.

THE 1,083 deaths registered in the week are less by 86 than the average of the season; and, therefore, the return continues to indicate that improvement in the public health, which commenced a fortnight ago. Though the total number of deaths exceeds that of the previous week by 36, yet it is shewn that the mortality from epidemics continues to decline, for the deaths enumerated in this class in the last three weeks were respectively 310, 243, and 233, and have now fallen to within twelve of the average. Small pox and measles are fatal in a week to only half the usual number of children; the ravages of scarlatina have declined from nearly two hundred deaths in the autumn of last year to 42, which is little above the average. Typhus has also fallen to near the weekly average. The deaths registered from cholera last week were only nine; the highest number in any week of recent experience was 94, when it broke out at Tooting. Of the nine, two occurred in the workhouse of St. George in the East, where 10 deaths have occurred in the last five weeks, besides three during the whole period, which have occurred in the Cholera Hospital at Bath-terrace. It is worthy of notice, that deaths from diarrhoea and dysentery, which were 23, are numerous for this season, though little more than in 1848. The mortality from bronchitis is about the average; that from pneumonia has been for some time considerably less. Hooping cough, which has been prevalent, shows a decrease. Two young men, on whose bodies inquests were held, died in the Infirmary of the Millbank Prison, one of consumption, another of scrofulous peritonitis, disease having been accelerated in both cases by unseasonable removal from another prison; both died between two and three weeks after reception. A mason's labourer, aged 36, died, according to the verdict of the Coroner's Jury, from "chloroform properly administered on amputation of a toe." Death was instant; and a *post mortem* examination was made.

The mean height of the barometer was above 30 in. on every day except Tuesday, when it was 29.998 in. It was highest on Sunday, namely 30.270. The highest temperature observed was 60°.7 on Saturday; the mean of the week was 45°.9. The greatest difference between the dew point temperature and air temperature was on Sunday; and the mean on this day was 11°. The weather has been calm, but the wind generally in the North-west.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, March 17th, 1849.

All are certified by Medical Attendants.

ST. GEORGE, HANOVER-SQUARE; Belgrave.
F. 7, "bilious cholera (24 days.); health delicate from birth."

ST. GEORGE IN THE EAST; St. John.
In the Workhouse, a labourer, 63, "cholera."
In the Workhouse, widow of a mariner, 66, "cholera."

POPLAR; Poplar.
M. 61, "Asiatic cholera (30 hours)."

ST. SAVIOUR; St. Saviour.
In Guy's Hospital, M. 35, "cholera."

ST. GEORGE, SOUTHWARK; London-road.
F. 50, "cholera (15 hours)."

LAMBETH; Church, 2nd Part.
M. 12, "cholera biliosa (10 days)."

CAMBERWELL; Camberwell.
At 15, Queen's-row, Grove-lane, a gentleman 73, "dyspepsia, English cholera (3 days.); exhaustion."

ROTHERHITHE; Rotherhithe.
F. 19, "Asiatic cholera, (6 days)."

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive, with moderate tension, from noon till 3h. p.m. Nothing was shewn at any other time.	The clouds were slightly broken at 3h. p.m.; with this exception the sky was overcast throughout the day; cirrostratus and scud.
MON.	Positive, with weak tension at 3h. p.m. Nothing was shewn at any other time.	The sky was overcast throughout the day; cirrostratus and scud.
TUES.	Nothing was shewn throughout the day.	The clouds were slightly broken at noon, the sky was otherwise overcast throughout the day; cirrostratus and scud.
WED.	Nothing was shewn till noon. Positive, with strong tension during the remainder of the day.	The sky was overcast throughout the day; cirrostratus and scud.
THURS.	Positive, with tension strong throughout the day.	The sky was overcast throughout the day; cirrostratus and scud.
FRID.	Positive, with moderate tension throughout the day.	The sky was overcast throughout the day; cirrostratus and scud.
SAT.	Nothing was shewn throughout the day.	The sky was generally free from cloud, but thick haze was prevalent.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. I, 1846.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore exhibit the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

* In reading the 16th column, it will be borne in mind that + is read "higher;" and - "lower," than the average.

The mean reading of a thermometer placed on the mainmast of the Dreadnought Hospital Ship, and read each day at 6h. a.m. was 48°0, and the mean reading at 6h. p.m. was 47°3; the mean readings at the Royal Observatory for the same times were 47°7 and 46°6 respectively.

Births and Deaths registered in London,
During the Week ending Saturday, March 24th, 1849.

ANNUAL SERIES X.] PUBLISHED BY AUTHORITY OF THE REGISTRAR GENERAL. [No. 12.

Weekly Average derived from Deaths of 1844-5-6-7-8, and corrected for increase of Population	Males	592	Deaths registered in the Week	Males	505	Births registered in the Week	Males	740
	Females	577		Females	543		Females	795
	Total	1169		Total	1048		Total	1445

* The ages of two persons, whose deaths are ascribed to disease of brain, and disease of kidneys, respectively, are not stated.

HEALTH OF LONDON DURING THE WEEK.

THE Weekly Return continues to exhibit a satisfactory state of the public health. The deaths, which were about 1,200 towards the end of last month, have fallen in the last week to 1,048, or 121 less than the average. The mortality from epidemics, with the exception of hooping cough, is little more than the average, and has fallen 25 per cent. within the period of a month. The mortality caused by small-pox and measles is still unusually low; that from scarlatina is now little more than the average. Diarrhoea has declined; and the deaths from cholera are only 10, 9 of which, as is shewn below, occurred in one workhouse and two hospitals; three in one family. Scarlatina and typhus were each fatal to 40 persons, which is rather less than the average for the latter disease. Inflammation of the lungs and air passages, and pulmonary consumption, do not prevail fatally at the present time: the aggregate deaths in the week from these diseases were only 260, whereas the average is 329. Three are recorded as deaths from intemperance, and had been the subjects of inquest. A woman of 62 years, whose occupation was unknown, died in Park-street, Dorset-square, of "exhaustion from having denied herself the common necessaries of life." (*Inquest*).

A favourable condition of the atmosphere may be esteemed perhaps the principal cause of the recent improvement in the health of London. The mean height of the barometer in the week was 29·963. It was above 30 on Tuesday, Wednesday, and Thursday. The mean daily temperature ranged from 42° on Monday, to 36° on Saturday. The weekly mean was 40°·8. The greatest observed differences between the dew point temperature and air temperature were on Tuesday, Wednesday and Saturday, when they were respectively 14°·1, 10°·1, and 15°·4. This denotes dryness of the atmosphere. The wind blew for the most part from the North and East.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, March 24th, 1849.

All are certified by Medical Attendants.

ST. PANCRAS; Tottenham.

At 20, Windmill-street, widow of a cabinet-maker, 66, "constipation, dysentery, and cholera (6 days)."

WHITECHAPEL; Goodman's Fields.

The three following cases occurred in the Cholera Hospital, 88, Leman-street:—

A labourer, 38, "Asiatic cholera."

Wife of the above, 38, "Asiatic cholera."

Daughter of the above, 2 months, "Asiatic cholera."

ST. GEORGE IN THE EAST; St. Paul.

The two following cases occurred in the Cholera Hospital, 3, Bath-terrace:—

On the 19th March, M. 59, removed from the Workhouse, "cholera (12 hours)."

On the 20th March, M. 84, removed from the Workhouse, "cholera (3 days)."

St. John.

The four following cases occurred in St. George's Workhouse:—

A widow, 62, "cholera."

A widow, 74, "cholera."

A widow, 34, "cholera."

Widow of an umbrella-maker, 62, "cholera."

DAY	ELECTRICITY	GENERAL REMARKS.
SUN.	Positive, with weak tension at March 23d., 9h. p.m.; this was the only time electricity was shewn during the week.	The sky was overcast throughout the day; cirrostratus and scud. Thick fog was generally prevalent.
MON.		The clouds were slightly broken at 3h. p.m., the sky was otherwise overcast throughout the day.
TUES.		The sky was overcast till noon; three-fourths were covered till 3h. p.m., and it was generally cloudless afterwards; cumulostratus, cirrostratus, and scud.
WED.		The sky was overcast till 6h. p.m., and cloudless afterwards; cirrostratus and scud.
THURS.		The sky was overcast throughout the day; cirrostratus and scud. Several flashes of lightning were seen in the S. during the evening.
FRID.		The sky was overcast throughout the day; cirrostratus and scud.
SAT.		The sky was overcast till about noon, three-fourths were covered at 3h. p.m., and it was cloudless at 9h. p.m.; cirrostratus, cumulostrati, cumuli, and scud. Occasional showers of snow and hail fell during the day.

The height of the cistern of the barometer is considered to be 159 feet above the mean level of the sea. The readings of the barometer are considered to be coincident with those of the Royal Society's flint glass standard barometer. The amount of cloud is estimated by considering a clear sky to be represented by 0, a cloudy sky by 10; and when partially cloudy by estimating the number of tenths of the whole sky covered with cloud. The observations are taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The mean of the values observed at these times are converted into mean daily values by the application of corrections, deduced by Mr. Glaisher, from five years' observations ending December 31, 1845.—See *Phil. Trans.* Part. 1, 1848.

The results for temperature of the air include those deduced from the maximum and minimum temperatures as determined by self-registering thermometers, by applying the proper corrections.

The readings of the two self-registering thermometers, the one placed in the full rays of the sun, and the other placed on grass fully exposed to the sky, are taken every midnight, and therefore afford the highest and lowest readings respectively that have occurred in the previous 24 hours. They are, however, placed here opposite to the civil day which precedes that on which the thermometers are read.

• In reading the 16th column, it will be borne in mind that + is read "higher," and — "lower," than the average.

The mean reading of a thermometer placed on the masts-top of the Dreadnought Hospital Ship, and read each day at 9h. a.m. was 43.4, and the mean reading at 9h. p.m. was 39.5; the mean readings at the Royal Observatory for the same times were 40.9 and 35.2 respectively.

G. B. AIRY,
Astronomer Royal.

Births and Deaths registered in London,

During the Week ending Saturday, March 31st, 1849.

	Females	577		Females	625		Females	822
	Total	1169		Total	1241		Total	1621

HEALTH OF LONDON DURING THE WEEK.

THE deaths registered in the week were 1241, or 72 more than the weekly average of the season. But it must be observed, that the excess in this return is not caused by sudden increase of mortality: it is due to an accumulation of Coroners' cases, which occurred in previous weeks, though they were not registered till the end of the quarter. The cases on which inquests were held, and registered last week were 198, and are principally found amongst violent and sudden deaths. If 60 be taken as the number of inquests that on the average actually occur in a week, which is probably not far from the truth, 138 are included in this return to account for the increase of deaths registered. The persons who died in the week were, therefore, about 1,100, while the average is 1,169. Small pox, measles, typhus, pneumonia, and phthisis, all continue to be less fatal than usual; whooping cough prevails to some extent. Cholera has nearly disappeared from London, the deaths in last week being not more than four. Six deaths were caused by privation, most of them having occurred, probably, in various weeks of the quarter. A cork-cutter, of 35 years, was found in Spur-street, Leicester-square, and died in 12 hours afterwards, of "exhaustion from want of the common necessities of life, and general neglect"—(*Inquest*). The wife of a pensioner at Greenwich died of "serous apoplexy, hastened by the want of proper nourishment."—(*Inquest*). The whole number of deaths in the last three months by starvation, either from poverty or self-neglect, or voluntary abstinence in lunacy, is 13; the number from want of breast-milk and inanition, in the same period, is 28. A man died from injury, which he received from falling in a state of intemperance. Two lads, respectively 17 and 18 years, died from excessive drinking; one was found dead on board a ship. In the first quarter of this year, intemperance is reported as the immediate cause of 21 deaths; in other cases persons died of injuries from falls, carriages or otherwise, after excess in drinking; also 40 deaths are ascribed to delirium tremens, a disease which, in a majority of cases, is the effect of intemperance. A woman died in Thornhill-street, Islington, of fever after childbirth, in which the medical attendant certifies, that her illness was aggravated, if not caused, by bad drainage. A girl of six years also died in St. Giles-in-the-Fields (North), of "typhus (5 days); and deficient drainage," according to medical certificate.

The mean height of the barometer was under 30 in. every day of the week. It was 29.777 on Sunday, after which it fell almost continuously till Friday, when it was 29.223. It rose again on Saturday to 29.476. The mean daily temperature rose gradually from the beginning to the end of the week, and on Saturday was 48°·0. The mean temperature of the week was 40°·8.

FATAL CASES of CHOLERA Registered in the Week ending Saturday, March 31st, 1849.

Three are Cases in which Inquests were held; the other was certified by Medical Attendants.

ST. PANCRAS; Camden Town.

M. 7, brought from Drouet's establishment at Tooting, in January, "malignant cholera, occurring to him at a time when he was suffering from insufficient diet and warmth of clothing, and impure air."—*Inquest*.

HACKNEY; West Hackney.

F. 57, "natural death from cholera (20 hours)."—*Inquest*.

WHITECHAPEL; Mile End New Town.

At Spring Gardens, M. 3, "died from malignant cholera."—*Inquest*.

POPLAR; Bow and Bromley.

In Heury-street, F. 9 months, "gastritis (3 days); cholera (2 days)."
